SPECIAL ANNOUNCEMENT

A Nation Responds: Recent Efforts to Improve Education

In May 1984, the Department of Education published this summary of the Nation's responses to recent studies in education, including the report of the National Commission on Excellence in Education, *A Nation at Risk*. This document extends the information provided in December 1983 in the publication *Meeting the Challenge* and consists of three parts:

- An overview which describes national developments in education in the last 12 months and summarizes State and local efforts to improve education.
- A section on State initiatives which provides a State-by-State profile of recent activities and a chart summarizing these initiatives.
- An informal sampling of significant efforts by local schools, school districts, postsecondary institutions, associations, and the private sector.

This report is available from the U.S. Government Printing Office (GPO), Superintendent of Documents, Washington, D.C. 20402 (\$7.50, Stock #065-000-00198-5).

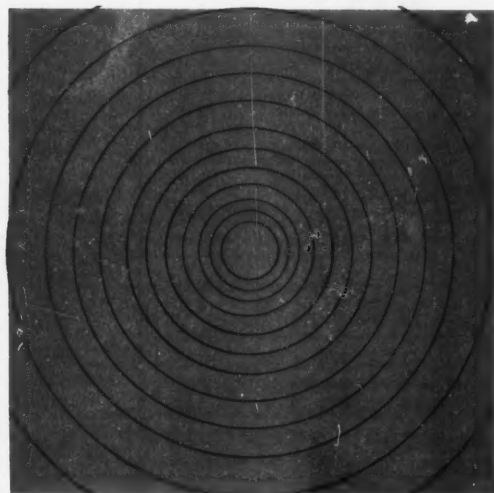

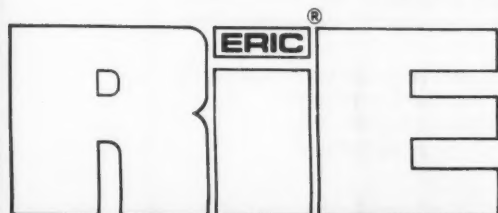

It is also available from the ERIC Document Reproduction Service (EDRS), P.O. Box 190, Arlington, Virginia 22210, in microfiche (\$.97) or paper copy (231 pages, \$17.90). Order by the ERIC Accession Number (ED 240 748), announced in the July 1984 issue of *Resources in Education*.

RESOURCES IN EDUCATION

ED 240 226-241 671

July 1984

Volume 19 • Number 7

Resources in Education (RIE) is processed for printing by ORI, Inc., under contract with the National Institute of Education, U.S. Department of Education, and published monthly by the U.S. Government Printing Office (GPO) with printing funds approved December 1980 by the Office of Management and Budget. Contents do not necessarily reflect official NIE policy.

Copies of *RIE* are available from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, D.C. 20402. Inquiries regarding subscription prices (12 issues/year) and single issue prices should be directed to the Superintendent of Documents.

Two *Semiannual Indexes* to *RIE* (January-June and July-December) are also available from GPO. Contact the Superintendent of Documents for prices.

Introduction

RESOURCES IN EDUCATION (RIE) —A monthly abstract journal announcing recent report literature related to the field of education, permitting the early identification and acquisition of reports of interest to the educational community.

**Sponsor: Educational Resources Information Center (ERIC)
National Institute of Education (NIE)
U.S. Department of Education
Washington, D.C. 20208**

ERIC is a nationwide information network for acquiring, selecting, abstracting, indexing, storing, retrieving, and disseminating significant and timely education-related reports. It consists of a coordinating staff in Washington, D.C. and 16 clearinghouses located at universities or with professional organizations across the country. These clearinghouses, each responsible for a particular educational area, are an integral part of the ERIC system. The clearinghouses are listed on the inside back cover.

Organization of Journal: *Resources in Education* is made up of resumes and indexes. The resumes provide descriptions of each document and abstracts of their content. Resumes appear in a "Document Section" and are numbered sequentially by an accession number beginning with the prefix ED (ERIC Document). The indexes appear in an "Index Section" and provide access to the Resumes by Subject, Personal Author, Institution, and Publication Type.

Availability of Documents: The documents cited in *Resources in Education*, except as noted, are available from the ERIC Document Reproduction Service (EDRS), in both microfiche (MF) and paper copy (PC), or microfiche only. Availability in microfiche only may be determined by the source, for proprietary or copyright reasons, or by ERIC for reasons related to legibility and reproducibility. The price per document is based on the number of pages and is subject to change over time. An ERIC Price Code Schedule permits the user to convert all price codes to actual dollar amounts. Current price information for documents, microfiche, and subscriptions to microfiche collections is to be found in the section entitled "How to Order ERIC Documents" in the most recent issue of RIE.

How to Submit Documents to ERIC: If you have documents that you would like to have considered for announcement in *Resources in Education* (RIE), you should send clean, legible copies (in duplicate, if possible) to the ERIC Processing and Reference Facility, 4833 Rugby Avenue, Bethesda, MD 20814. A reproduction release, giving ERIC permission to reproduce in paper copy and microfiche (or microfiche only), and signed by the author or official representative of the source institution, is requested for all documents selected for inclusion in RIE. Standard reproduction release forms may be obtained from the ERIC Facility (a sample appears at the back of this issue of RIE).

How To Order RIE: The U.S. Government Printing Office (GPO) prints *RIE* and functions as subscription agent. Detailed subscription information appears on the page in the back of *RIE* entitled "How to Order **RESOURCES IN EDUCATION**."

HIGHLIGHTS Of Special Interest

ERIC Clearinghouse Publications

This page highlights publications announced in this issue of *Resources in Education* which were created by the ERIC clearinghouses and which have been selected as having special significance for educators. For each brief citation appearing here, there is a full abstract appearing under the same ED number in the pages of the issue.

In addition to collecting the literature of education for announcement in *Resources in Education* and *Current Index to Journals in Education*, the ERIC clearinghouses analyze and synthesize the literature in a number of different formats designed to compress the vast amount of information available and to meet the varying needs of ERIC users. These formats include research reviews, state-of-the-art studies, interpretive studies on topics of high current interest, research briefs, annotated bibliographies, and compilations. While some publications are comprehensive reviews designed for those who are interested in pursuing a subject in depth, others are brief analyses designed for the busy practitioner whose time for staying abreast of new developments in education is limited.

ERIC publications are published either by the ERIC clearinghouses responsible for producing them or through cooperative arrangements with other organizations. Copies are usually available directly from the responsible clearinghouse or from the source listed in the citation. In addition, the publications announced in *Resources in Education* are contained in all ERIC microfiche collections, and are available in paper copy and/or microfiche from the ERIC Document Reproduction Service (EDRS), P.O. Box 190, Arlington, Virginia 22210. Special collections of clearinghouse publications are also available on microfiche from EDRS, as follows:

1975-77 (574 documents).....	\$120.95 (includes postage)
1978 (211 documents).....	\$ 43.45 (includes postage)
1979 (159 documents).....	\$ 36.93 (includes postage)
1980 (176 documents).....	\$ 39.05 (includes postage)
1981 (173 documents).....	\$ 39.05 (includes postage)
1982 (181 documents).....	\$ 39.05 (includes postage)

Identifiers — Consortium of States, *National Occupational Competency Testing Institute
 Women's opportunities for employment will be directly related to their level of skill and experience and also to the labor market demands through the remainder of the decade. The number of workers needed for all major occupational categories is expected to increase by about one-fifth between 1980 and 1990, but the growth rate will vary by occupational group. Professional and technical workers are expected to have the highest predicted rate (39 percent), followed by service workers (35 percent), clerical workers (26 percent), sales workers (24 percent), craft workers and supervisors (20 percent), managers and administrators (15 percent), and operatives (11 percent). This publication contains a brief discussion and employment information concerning occupations for professional and technical workers, managers and administrators, skilled trades, sales workers, clerical workers, and service workers. In order for women to take advantage of increased labor market demands, employer attitudes toward working women need to change and women must: (1) receive better career planning and counseling, (2) change their career aspirations, and (3) fully utilize the sources of legal protection and assistance that are available to them. (SB)

Document Resumes

The document resumes in this section are arranged in numerical order by ED number, and also alphanumerically by Clearinghouse prefix and Clearinghouse accession number.

As explained in the Introduction, each Clearinghouse focuses on a specific aspect of education. The reader who is interested in one of these major aspects (e.g., Reading) may, however, find pertinent resumes among the entries of virtually any Clearinghouse, dependent on the orientation of the document. For this reason, it is important to consult the Subject Index if a comprehensive search is desired.

The following is a list of Clearinghouse prefixes and names used in this Section, together with the page on which each Clearinghouse's entries begin:

Identifiers—*Resources in Education

Resources in Education (RIE) is a monthly abstract journal that announces (catalogs, indexes, abstracts) documents of interest to the educational community (including researchers, teachers, students, school board members, school administrators, counselors, etc.). Each issue announces approximately 1,500 documents and provides indexes by Subject, Personal Author, Institution, Publication Type, and ERIC Clearinghouse Number. This special Computer Output Microfiche (COM) edition is prepared directly from the ERIC magnetic tape database prior to publication of the printed journal and therefore is lacking the cover and other regular introductory and advertising matter contained in the printed journal. The first accession in each issue of RIE is the issue itself. In this way, the monthly microfiche collection for each issue is immediately preceded by a microfiche index to that collection. This practice began with the RIE issue for May 1979. (LRS/WTB)

Identifiers—*USSR

This report details the history of making higher education available to young workers and peasants in the USSR since the October Revolution of 1917. The paper is organized into six sections. The first section introduces the paper and outlines the educational system in the Soviet Union, especially the types of higher educational institutions. The second section explains how illiteracy was eradicated in the USSR during the 1920s and 1930s—a necessary prelude to making higher education accessible to young workers and peasants. In the third and fourth sections, the history of preparing young workers and peasants specifically for higher education is narrated, with emphasis on factory schools, houses for the communist education of youth, and the "workers' faculties," which were created and flourished during the 1920s to 1940s. The final two sections of the report explain what has been done from the end of World War II to the present to help poor youth gain access to higher education, such as providing access to preparatory departments of higher schools and other forms of preparation and selecting school leavers for admission to higher schools (universities). (KC)

Job Service Referral and Placement Follow-Up Demonstration Project. Phase I-Feasibility Study and Design. Final Report. Executive Summary.

Macro Systems, Inc., Silver Spring, Md.

Spons Agency—Employment and Training Administration (DOL), Washington, D.C. Office of Policy, Evaluation and Research.

Pub Date—14 Mar 80

Note—45p; Charts contain small print.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Demonstration Programs, Employment Level, Employment Patterns, *Employment Services, Feedback, *Followup Studies, *Job Placement, *Program Design, *Tenure, Vocational Followup, *Wages

This executive summary presents the major con-

clusions of the initial feasibility and design phase of a two-phase study to determine the outcome of referrals and placements and the actual wage and job duration of selected employment service placements. The first chapter details the study scope and activities and describes the study design for each of the two phases. An exhibit summarizes the major findings of the phase I analysis, presents a discussion of the impact of the findings on local office operations, and specifies the design features incorporated into the proposed demonstration projects. Chapters 2 and 3 present the methodologies to be demonstrated on a pilot-test basis at one local office for referral/verification follow-up and one local office for placement follow-up. Chapter 2 describes the objectives and scope of the proposed referral/verification demonstration program and the underlying operation concepts, presents procedural and organizational highlights, and identifies evaluation criteria that will be used to measure its effectiveness. Chapter 3 describes the placement follow-up demonstration, including its objectives and benefits, operational highlights, methodological considerations, and criteria to be used in evaluating its performance. Benefits from the analyses of both demonstrations are listed in the fourth chapter on analysis activities. (YLB)

Gillen, Marie

A Unique Learning Experience: Practical Workshops in Educational Leadership.

Pub Date—Nov 82

Note—23p; Paper presented at the National Adult Education Conference (San Antonio, TX, November 1982).

Pub Type—Speeches/Meeting Papers (150) - Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Administrator Attitudes, *Administrators, *Boards of Education, Inservice Education, *Leadership Training, Learning Experience, Management Development, Participant Satisfaction, Postsecondary Education, *Program Attitudes, Program Content, Program Design, Program Effectiveness, Program Implementation, *Workshops

Identifiers—*Atlantic Institute of Education NS

Since 1976, the Atlantic Institute of Education in Nova Scotia has conducted a series of workshops to help school administrators and school board members to develop their practical leadership skills. The services provided by the workshop program include needs assessment, inservice workshops, information services, dissemination of materials, and identification of resources. Unique features of the program include the following: (1) the program is practical and targets leadership skills through a variety of subjects, such as declining enrollments and human

2 Document Resumes

relations; (2) it is the only program aimed at the combination of school administrators and school board members; (3) the program relies on local educators for volunteer support and leadership; (4) the workshops are conducted in residential settings (hotels) with amenities to make the stay pleasant; (5) the workshops are advertised almost solely by word-of-mouth through satisfied participants and free advertising in their informational bulletins; and (6) the coordinator of the program is an adult educator, rather than a person degreed in educational administration. A random survey of more than 450 school administrators and school board members who have attended the workshops showed that the participants were enthusiastic about their experiences. Their responses showed that the workshops promote learning by establishing a productive environment, by giving participants opportunities to shape the direction and content of the program, by designing workshop content so that it relates to the real-life experience of the participants, by enabling participants to be actively involved in working with the ideas presented during the workshop, and by integrating evaluation procedures into the entire program. The results of the survey will be used in planning future workshops. (KC)

Literacy Crusades and Revolutionary Government: The Cases of Cuba, 1961, and Nicaragua, 1960.

Pub Date—31 Mar 83

Note—48p.; Not available in paper copy due to light and broken type.

Pub Type—Opinion Papers (120)

EDRS Price—MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Adult Basic Education, *Adult Literacy, Developing Nations, Educational Philosophy, *Literacy Education, *Outcomes of Education, Political Socialization, Program Development, *Program Effectiveness, Program Implementation, Volunteers

Identifiers—*Cuba, Literacy Campaigns, *Nicaragua

After the Castro revolution of 1959, the new Cuban revolutionary government began a massive literacy campaign that taught 700,000 persons to read in about a year. Twenty years later, Nicaragua, facing an even more serious literacy problem, conducted a similar literacy campaign. In approximately six months, Nicaragua had reduced illiteracy by 37 percent. What accounts for the phenomenal success of these two countries in producing such massive reductions in illiteracy? Several features that the two campaigns had in common can help to explain their success. First of all, the literacy campaigns were a continuation of the revolutionary mentality, substituting a war of governmental control for a war on illiteracy. The new patriots were able to channel their revolutionary fervor to a new cause and help to solidify their political gains at the same time. Second, the subject matter of the literacy campaign was political; new government leaders needed the support of the people, so they used the teaching of reading as a tool for the teaching of their political philosophy. Third, both campaigns relied on the commitment of enthusiastic volunteers in a common cause, especially hundreds of thousands of high school-aged youth. Finally, the literacy campaigns succeeded because of the tremendous dedication with which they were mounted and carried out, again a product of the revolutionary zeal, and because of their political bias that served as a unifying force for learners and teachers. (The literacy campaigns of each country are described in detail in this paper.) (KC)

Sobeih, Nabil Ahmed Amer

University Studies in Adult Education in the Arab Countries (A Comparative Study).

Pub Date—Mar 81

Note—46p.; Presented at the Conference of the Comparative and International Education Society (Tallahassee, FL, March 18-21, 1981).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—*Adult Education, Adult Educators, *Adult Literacy, *Adult Programs, Continuing Education, Economic Development, *Educational History, *Educational Improvement, *Educational Needs, Educational Philosophy, Educational Planning, Educational Trends, Ex-

tension Education, Futures (of Society), Higher Education, Literacy Education

Identifiers—*Arab States, Egypt, Sudan

That adult education is an important aspect of a country's development is an idea that is often overlooked by the institutions of higher education in the Arab countries. Although a need for adult continuing education and adult literacy training exists, these needs are often ignored or frowned upon by Arab universities, which have traditionally conducted education for its own sake along with some research. Further research in the field of adult education and more understanding of how adults learn is needed in order to professionalize the adult education efforts of the universities in the Arab region. However, some efforts in adult education have been made. For example, the Egyptian University of Al Azhar has traditionally met adult education needs by carrying extension programs of religious education to the people, and other Egyptian universities have begun pioneering programs in public service that focus on liberal evening studies in languages and vocational subjects for adults. In the Sudan, provisions are made for courses in adult education and literacy within the framework of the University of Khartoum, which operates a graduate school of adult education studies and a division of studies in various fields for university or secondary graduates. For the future, Arab universities should emulate the programs of adult education in place at universities in other countries, particularly in the United Kingdom, the United States, Canada, and other advanced countries. Vocational Education Research in the 1980s. Proceedings of a National Conference.

American Vocational Education Research Association, Washington, D. C.; Coordinating Committee on Research in Vocational Education (ED), Washington, D. C.

Pub Date—83

Note—163p.; Papers presented at the Colloquium on Vocational Education Research in the 1980s (Washington, DC, July 29-30, 1982).

Pub Type—Collected Works - Proceedings (021) — Opinion Papers (120)

EDRS Price—MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Change Strategies, Curriculum Development, *Educational Research, Financial Support, Futures (of Society), Guidelines, National Programs, Program Improvement, Research and Development, *Research Design, *Research Methodology, *Research Needs, Research Problems, School Districts, State Programs, *Vocational Education

These proceedings consist of the papers presented at a conference on vocational education research in the 1980s. The first group of papers deals with various approaches to, and priorities for, vocational education research in the 1980s. Discussed in the next group of papers are national perspectives on research programming. Following this group are nine papers devoted to state and local perspectives on research programming; topics addressed include the following: vocational education program improvement; a research development agenda for the 1980s that would cover productivity, economic advancement, and human resource development; programming recommendations regarding curriculum; and the perspectives of a superintendent of schools on vocational research and development. Presented in the fourth group of papers are the views of five individual researchers pertaining to directions and approaches for vocational education research to take in the 1980s. Appendixes to the proceedings include a colloquium agenda and a list of colloquium participants. (MN)

Identifiers—United Kingdom, *West Germany

A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to observe the nature and scope of measures to deal with youth unemployment in that country. During their study, the observers focused their attention on the problems of the transition from school to working life, the context of the problem of youth unemployment in the FRG, curriculum and institutional interfaces, special educational needs, and structural differences between the systems of education and training in the UK and FRG. Based on their observations, the investigators developed a series of short- and long-term recommendations pertaining to the development and implementation of measures to deal with youth unemployment in the UK. Included among these were calls for the accelerated development of effective vocational preparation for young people in schools during the first year of working life, for supplying grant aid to young people following vocational preparation post-school courses, for legislation requiring employers to release employees under 21 for training and related education on an appropriate part-time basis without the loss of earnings, and for the supervision of national education and training agencies by one national ministry. (Appendices to this report include discussions of the dual system for vocational education and apprenticeship training in the FRG as well as Arbeitslehre and Berufsberatung.) (MN)

Identifiers—Special Needs Students, United Kingdom, *West Germany

A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to observe the nature and scope of vocational counseling and guidance in that country. During their study, the observers focused their attention on the problems of the transition from school to working life; arbeitslehre, or education about work that typically takes place at the secondary level; vocational orientation, counseling, and placement; special needs; and questions about national and cultural differences between the UK and FRG. The observers found that vocational counseling and guidance services in the FRG are quite effective. They attributed this effectiveness to various factors, including the clear political commitment at all levels to the coordination and provision of education and training, the close coordination of employ-

ees and educators, and the threat of a training levy to enforce clearly agreed objectives. Based on these observations, the investigators made recommendations calling for the establishment of a national body to bring together employers, unions, educational administrators, and teachers to establish training aims and objectives as well as proposals for their implementation. (Appendixes to this report include discussions of the educational system in the FRG and cooperation among schools and vocational guidance services there.) (MN)

Identifiers—United Kingdom, *West Germany

A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to observe current experiments with the first year of apprenticeship training or, as it is called in Germany, the Berufsbildungsjahr (BGJ). During its study, the visiting party focused its attention on the objectives, design, curriculum, and principal teaching methods used in the BGJ. The observers found that the BGJ, which has been designed as an alternative to the first year of traditional apprenticeship in the dual system for education and apprenticeship and which provides training in 13 basic vocational areas, provides a greater educational opportunity for school leavers in the 16-19 age range than do any currently available programs in the UK. Furthermore, the BGJ enjoys the strong support of employers, unions, the educational community, parents, and students in the FRG. Based on their observations, the investigators developed a series of recommendations calling for the development and implementation of a similar program in the UK. (Appendixes to this report include a discussion of the dual system and more detailed suggestions for the implementation in the UK of the visiting party's proposals.) (MN)

Relationship, Teacher Qualifications, Teacher Role, *Trainers, Tutors, Unemployment, Vocational Education

Identifiers—United Kingdom, *West Germany

A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to observe the role of industrial tutors in providing technical training to German workers. During their study, the investigators focused their attention on the role of the master in the vocational education and training system in locations such as firms' training centers, special centers for unemployed and disadvantaged persons, and in the Berufsschule (vocational schools). The investigators found that in the FRG the relationship between education and industry is much more tightly defined in law and practice than in the UK. After examining the historical development and current role of the master, master training, the responsibilities of the master, and British requirements for the training of industrial tutors, the researchers made a series of recommendations pertaining to industrial training in the UK. These included calls for legislation requiring that all firms and organizations providing industrial training apply for approval as training agencies and for national standards for trainers. (Appendixes to this report include a discussion of the dual system for vocational education and apprenticeship training in the FRG along with extracts from regulations pertaining to the training and examination of industrial trainers and masters.) Identifiers—United Kingdom, *West Germany

A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to observe one- and two-year full-time courses in office skills that are designed for recent school leavers who did not participate in the country's dual system of vocational education and apprenticeship training. The focus of their observations was on the Berufsbildungsjahr and Berufsfachschule; the training and role of teachers and instructors in the vocational education system; language learning, especially business English; theory and practice in terms of general provision of language training in the vocational field; and course content, methods, and examinations. On the whole, the FRG system was seen as highly structured and fairly inflexible, largely because the educational half and the apprenticeship half of the dual system exist under different legislation. The UK observers felt that the narrowly defined and separate apprenticeships did not match the times in terms of economic, industrial, and occupational change. Despite its problems, it is commendable that the vocational education system in the FRG is still prepared to absorb all young people in significant education and training following compulsory schooling. (Appended to this report is a discussion of the dual system for vocational education and apprenticeship training in the FRG.) (MN)

Identifiers—Special Needs Students, United Kingdom, *West Germany

A vocational education administrator from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to observe the education and training of young handicapped adults at 14 sites throughout the country. The focus of his investigation was on vocational counseling and vocational education and training for handicapped and disadvantaged individuals. Based on his site visits, the administrator concluded that the West German dual system of compulsory education for all individuals under the age of 18 is of benefit to both the mentally and physically handicapped youth. In the FRG, career counselors are much more involved in the educational and training process than are local school officials. The education and training of handicapped individuals in the FRG is supported by many more charitable organizations than in the UK, and in return, the federal government gives much greater financial backing to their schemes. In general, provisions for handicapped and disadvantaged individuals in the FRG are greater than those currently offered in the UK. (Appended to this report is a discussion of education in the FRG.) This collection of papers, consisting of six reports, is the result of a research project during which vocational educators from the United Kingdom traveled to the Federal Republic of Germany to examine the ways in which secondary school students in that country learn about the world of work. Included in the volume are the following reports: "The Secondary School System of the Federal Republic," by Russ Russell; "Arbeitslehre in the Federal Republic of Germany," by J. Woppel; "Concept and Experi-

mental Models for the Teaching of Arbeitslehre in the Rheinland-Pfalz," by Paul Pardall; "Multi-Subject Teaching Unit: Vocational Orientation," by Staatliches Schulamt, Stuttgart; "Arbeitslehre in Baden-Württemberg und Berlin," by John Perry; and "The New School Subject," by Stephen Castles and Wiebke Wustenberg. A glossary concludes the volume. (MN)

Identifiers—*Caterers, United Kingdom, *West Germany

A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of Germany (FRG) to examine West German vocational education and training for the hotel and catering industry. During the study, the investigators examined the training with respect to regulations, the content of training, and the structure of the assessment system. After noting the widespread willingness of West German employers to participate in their country's dual system for vocational education and apprenticeship training, the British observers called for the development of long-term strategies to link the school and business communities in the UK. They also felt that, like the FRG, the UK should take steps to ensure that all full-time technical education program students have a good background in practical skills and that all students under the age of 18 be given day-release for further education. (Appendixes to this report include a description of the dual system, training regulations for cooks, extracts from the training regulations for meisters, and a glossary.) (MN)

Identifiers—United Kingdom, *West Germany
A party of vocational educators from the United Kingdom (UK) traveled to the Federal Republic of

Germany (FRG) to examine West German education and training for the hairdressing industry. During their study, the British educators examined the training with respect to entry into further education, industry, and school; vocational preparation; course content for apprenticeship; basic craft and examinations; career development; and teaching and training qualifications. In addition to reporting on the West German educational system, the investigators made a number of comparisons between the vocational training systems in the UK and FRG. Based on these observations, recommendations were made calling for student hairdressers to spend a proportion of their training time in the salon as well as in college. It was further recommended that all of those persons responsible for training hairdressers have a minimum teacher training qualification regardless of where they teach and that a master level or its equivalent be accepted as a statutory requirement for opening a business and training apprentices. (Appendixes to this report include a description of the dual system for vocational education and apprenticeship training in the FRG as well as a discussion of beauty therapy in the country.) (MN)

Identifiers—*Netherlands, *Participation Education

This collection of eight papers reflects Dutch experiences on topics of common interest and concern in the education of less able 16 to 19 year olds throughout the European economic community. "An Outline of the Dutch System of Education" (Philippa Andrews and Colin Turner) provides a basic background to Dutch education, concentrating particularly on the further and technical systems. "Introduction and Background to Participation Education" (C. Turner) discusses how to maximize participation by early school leavers in vocational programs. "The Institutional Network of Participation Education" (Russ Russell) describes the interrelationships between the various sectors. The next two papers by C. Turner and R. Russell, respectively, describe two participatory educational institutions. "The Operation of Partial Compulsory Education in the Netherlands" (Arie Mens) reports some of the experiences resulting from raising the educational requirements. "Industrial Training and Apprenticeship in the Netherlands" (C. Turner) supplements the first paper to provide a briefing to Dutch educators. "Vocational Preparation in Holland," an edited version of an article printed in EDUCA, October 1978, raises the problem of trying to achieve a qualified apprenticeship in a shorter period of time. Appendixes include basic statistics on the Netherlands, addresses of organizations, and a bibliography. (YLB)

Materials are presented from a seminar that brought together practicing German and British educationalists to compare the differing curriculum decisions and implementation processes in England and Wales with those in the Federal Republic of Germany. A foreword provides the objectives, methods, and funding bodies. Section 2 is a comparative introduction to the text that makes recommendations for further study. Detailed comments on the formal structure of technical and vocational education in the Federal Republic of Germany are offered. Specific topics are the upper secondary vocational school system, vocational training at upper secondary level outside schools, and curriculum processes. Section 4 is a glossary of terms used in the three specialists reports. The next three sections contain the reports of the technician education, business education, and vocational education groups. Each report describes the structure of the educational system in the two countries as determined from visits and the curriculum and/or curriculum development. Section 8 presents the conclusions and suggestions for further study from each of the three groups. The final section includes the seminar timetable with a list of institutions studied during the seminar and a list of membership in the seminar. (YLB)

Identifiers—Denmark, *Europe, France, Ireland, Netherlands, United Kingdom, West Germany

This comparative study on craft apprenticeship in Europe is divided into four parts. An introductory section analyzes developments and trends in apprenticeship training in Europe. The second section is a view of vocational training derived from interviews with European commission officials. Some common issues in apprenticeship training in Denmark, Eire, France, Netherlands, United Kingdom, and West Germany are then examined. They include definitions of apprenticeship; legislation; participating bodies; component parts of the apprenticeship program; education, training, and work experience; starting age and duration of apprenticeship; formal qualifications and examinations; guidance and supervisory services; reform and development; take-up rates; and examples of ranges of trades involved. Appendixes provide background material on the European community, including the structure of the European economic community, vocational education and training, and general educational policy. They also provide a summary of general principles for vocational training agreed upon by the Council of Ministers in 1963. (YLB)

Work Relationship, Foundations of Education, Postsecondary Education, Secondary Education, *Vocational Education

Identifiers—United Kingdom, *United States
Beginning with a comparison of American and Western European experiences, an introductory paper by David Parkes comments on Don Morgan's account of the social, economic, and moral context in which American education has developed. This comparative paper includes discussions on these issues: the value of relating American to Western European educational experiences, educational common problems and solutions in Europe, and particular educational difficulties in the United Kingdom. The title paper examines the purposes and functions (actual and supposed) of the major sectors of education in the United States. Concerned primarily with the relationship between education and work, the theory of some economists that education in the United States fulfills the interests of the elite is reviewed. It traces the rise of the major institutional forms of education and gives reasons for their emergence. These reasons are presented in the broad context of basic social institutions. Two recommendations are made: wholly new forms of educational institutions need to be invented and direct experience in technical, industrial, agricultural, or social service occupations should be a requirement for admission into postsecondary education. Identifiers—*Ireland

The current educational and training system in the Republic of Ireland is based on the classic economic model of educational planning. The Department of Education administers primary, secondary, and vocational education. Universities are controlled by the Higher Education Authority. The three levels of education are primary schools; secondary and vocational schools; and regional technical colleges, the National Institutes of Higher Education, and universities. Training is the responsibility of the Industrial Training Authority and the Council for Education, Recruitment, and Training. Ireland has aggressively used education for economic ends. Unemployment problems are linked to shortages of labor requiring third-level qualifications and apprenticeships, youth unemployment, and attitudes against industrial employment. Issues confronting Irish education include external funding sources, the population growth, poor attitudes toward technical education, academic escalation, the religious influence, centralization versus decentralization, and staff development. Included in the document are descriptions of the work of the City of Dublin Vocational Education Committee; middle, third-level vocational education and training at Galway Regional Technical College; and academic third-level vocational education at the National Institute for Higher Education (NIHEL), Limerick. Appendixes include information on NIHEL courses, programs, and the module credit system. (YLB)

Identifiers—*Sweden

The context for education in Sweden is for a society in which citizens enjoy economic well-being and social provision. The educational system consists of a grundskola and an integrated upper school combining the gymnasium, vocational school, and the professional school preparing students for subuniversity qualifications. Nineteen higher education institutions are being created. Provision for adult education, which is free, takes many forms. A bill has been implemented that provides for vocational orientation and preparation for the world of work through work experience for all grade levels. Problems of vocational orientation include noninvolvement of teachers, little integration of the work experience into the classroom, insufficient work placements, and disagreements as to the main purpose of work experience. Local school boards are responsible for educating all young people under 18 and may run centers for unemployed youth. These characteristics distinguish the Swedish educational system: education as part of a coherent, planned social strategy to build the ideal society; equality of education for each citizen; emphasis on personal development; relationship with the labor market and economic structure of the country; and centralization. Future developments include decentralization of activities from the National Board of Education and changes in upper secondary education. (YLB)

Since the states of the Federal Republic of Germany enjoy autonomy regarding all educational matters, coordination is ensured by various commissions and ministries. Compulsory full-time education from ages 6 to 15 is followed by compulsory part-time release until age 18. Education is divided into primary, lower secondary, upper secondary, and higher. The basic system of vocational education and training is the Dual System, under which a young person on a training contract or apprenticeship receives vocational training in the firm while attending a vocational school. The upper secondary system is divided into vocational schools and general education and "mixed-type" schools. Adult Education Institutes provide a wide variety of leisure, cultural, and vocational studies. (Brief overviews are offered on teachers, examinations, and curriculum coordination.) The country has responded with five sets of measures to solve the problems of the transition from school to working life: the curriculum component, learning about the world of work, vocational guidance, the vocational orientation year, a basic vocational training year, and apprenticeships. Problems of the 1980s include graduate unemployment and need for labor force flexibility. Appendixes include a typical plan of the states' educational systems, a glossary, and background information on the country. (YLB)

These five papers describe the educational system of the German Democratic Republic (GDR). An introduction by Derek Marsh overviews the climate for and aims of education in the GDR. "A Brief Introduction to the GDR" (Jean Finlayson) summarizes the economic background, standard of living, role of women, politics, religion, sports and culture, health care, and education. "Educational System of the GDR" (D. Marsh, J. Finlayson) discusses management and administration, preschool education, 10-year general polytechnical secondary schools, polytechnical education, post-16 provisions, the vocational guidance system and its organization, and apprentice training. "The Training of Teachers in the GDR" (Patrick Rooke) presents an historical background, describes training for different teachers, and reviews training at pedagogic universities and inservice training. "The Administration of Higher Education in the GDR" (Keith Ebbutt) gives a descriptive account of the administration of higher education, both nationally and institutionally. An attempt is made to show how power is distributed within this system. "Two Ideologies: The Politics of Vocational Training" (D. Marsh) draws broad comparisons between education and training in the GDR and the Federal Republic of Germany. Considerations include the roles of the federal government and the states, chambers of industry and commerce, and trade unions. A diagram of the GDR educational and training systems and a glossary are appended. (YLB)

This paper reviews and analyzes adult educational activities in China from the late 1920s to the present. A brief historical overview and discussion of the Chinese definition and conceptualization of worker-peasant education is followed by an examination of worker-peasant educational organization, policies, and objectives. These major worker-peasant educational organizations are then described and analyzed: enterprises (worker education), the communes (peasant education), local government-sponsored adult education, mass organizations and adult education, and the mass media. These adult educational institutions and programs are described in terms of major clientele or target groups, program objectives, techniques for popularizing the program, general organization and administration, curriculum, instructional methods, teaching-learning materials, staffing, cost and financing, and monitoring and evaluating. The paper concludes with a discussion of general issues and lessons emerging from the Chinese experience in adult education, including use of group arrangements for promoting exchange of experience and technology, ability to mobilize unused and underutilized resources, and motivational techniques for promoting user participation. (Various materials relating to adult educational programs are appended.) (YLB)

Identifiers—*Chile

The three papers which make up this report all deal with the potential impact on learning of investments in school resources: textbooks, school facilities, and teacher training. The first two papers use data from a longitudinal study of young people in Chile. The linkage between education and labor market entry is addressed in the first paper. These conclusions are drawn: educational variables are more powerful predictors of occupational attainment than family social status, and educational quality variables are much more powerful predictors of occupational attainment than educational attainment or achievement. The second paper examines factors that explain changes in academic achievement levels between the end of primary and the end of secondary school. It concludes that among the relatively small percentage of students who both completed secondary school and took the university entrance exam, changes in achievement levels are explained primarily by differences in the quality of the educational experience rather than in the differences in family background. Using data from a questionnaire observation study of actual teaching-learning behavior in Chilean classrooms, the third paper examines patterns of textbook use and concludes that teachers vary widely in attitudes toward and use of texts, that students have a much more positive perception of texts than do teachers, and that the main problems in textbook use are negative teacher attitudes and the inability of poorer children to buy them. During the 1980s the Korean economy will have to undergo far-reaching structural changes. The major problems faced by the Korean labor market continue to be an excessive demand for college graduates and an excessive supply of high school graduates. Their solution requires a renewed national commitment to human resource development with emphasis on technical education and vocational training. Two means of tackling these problems are the establishment of institutional linkages between formal education and vocational training and improvement of the vocational training system. Specific measures that should be taken are (1) revision and clarification of the educational and training goals of vocational junior colleges and high schools, (2) expansion of educational upgrading opportunities

for employed workers, (3) expansion of the employment of high school graduates through improvements of their quality, (4) improvement of the practical training facilities of vocational high schools, (5) review of the compulsory training and levy system, (6) establishment of an incentive system to motivate business to provide inplant worker training, (7) improvement in the personnel management of enterprises, (8) nationalization of public training institutions, and (9) establishment of an autonomous public agency for training and skill tests. Identifiers—*Africa

The five papers in this volume examine the methods, costs, and effects of traditional agricultural extension services and basic education and about the use of mass media for extension and education. The first paper, a literature review regarding the effectiveness of agricultural extension, reports that extension agents' studies of internal efficiency have been generally critical, while evaluators of external efficiency, mainly economists, show much more positive results. It is suggested that extension agents often have irrelevant evaluation criteria and economists generally overestimate the specific impact of extension services. The second paper reviews the literature on the comparative value of mass media and traditional approaches. Emphasis is on ways in which mass media have been used for agricultural extension and for basic education, ways in which mass media have been linked with group and individual study, and the costs of mass media as compared with alternatives. The remaining three papers discuss three different approaches to using mass media for rural education. These case studies focus on a government department, the Extension Aids Service of the Ministry of Agriculture of Malawi; a nongovernmental organization, INADES-Formation in West Africa; and a semigovernmental agency, the Lesotho Distance Teaching Centre. Public administration and management training (PAMT) in developing countries has expanded and diversified in the past three decades. Five preconditions have been identified as necessary to ensure the effectiveness of that training: training policies and management of institutions, the educational system, the stock of educated personnel, personnel policies and systems, and the administrative culture of gov-

ernments. Few less-developed countries (LDCs) have formally adopted training policies, especially related to public enterprises. The network of PAMT institutions can be divided into four main categories: government-owned and managed institutions, autonomous institutions, university-related institutions, and management institutes or schools. The first three types usually implement a classroom approach; newer types of management training institutes devote increasing attention to research and consultancy. Evaluative studies have shown that the impact and effectiveness of training in LDCs have not matched the institutional capacity. Poor management has had adverse effects on the content and quality of training. Some recent innovations in PAMT include shifts in conceptual approaches and changes in the targets and methods of training. In three areas (public personnel policies and systems, training policy, and utilization of existing training infrastructure) new policy initiatives and actions by LDC governments are needed. (YLB)

The issue of whether senior secondary education should be expanded in Indonesia was explored. The analysis was based largely on data from a nationwide tracer study that followed a cohort of primary, lower-secondary, and upper-secondary school leavers for two years after graduation in 1976. The schooling, training, and job experiences of this cohort were used to measure both the effectiveness of senior secondary education and the relative effectiveness of different types of schools. Analysis indicated that the seemingly high unemployment rate for senior secondary school graduates is not evidence of oversupply. Indonesian unemployment is mainly of persons in a long spell of unemployment, most of whom are young persons in transition from school to work. This was a lengthy process for young people wanting to continue their education, take courses, or remain home. Many did little to find a job when they wanted one and were willing to wait for reasonably well paid work. Virtually all senior secondary graduates who wanted work were eventually employed, at pay rates substantially higher than among those with less education. Senior secondary education was found to warrant expansion. Data indicated that the academic senior secondary schools are the best investment. (Data tables are appended.) (YLB)

Descriptors—*Developing Nations, *Educational Planning, Educational Policy, *Employment Projections, Foreign Countries, *Labor Force Development, Labor Market, Labor Needs

Identifiers—*Labor Force Analysis

The three papers in this document cover issues related to labor force analysis and educational in-

vestment in developing countries. They present an overview of the present situation, advocate the replacement of a dominant technique by a well-structured planning process, and suggest the wide range of analytic approaches available and necessary if labor force analysis is to be improved within this process. The introductory chapter discusses the economic approach to the analysis of education's contribution to social welfare objectives, summarizes governments' rationales to justify educational expansion, examines the debate concerning the appropriate technique to appraise educational projects from a labor force development perspective, and introduces the perspective the other two authors develop further. Chapter 2 argues that the effective management and planning of the labor force development sector is conditional on the existence of a centralized coordinating agency involved in a continuous planning process plus the increased use of cost-effectiveness analysis. The basic concern of chapter 3 is the formulation of more appropriate labor force planning activities, given a conception of labor market operation. Discussion follows of the labor market characteristics of high, middle, and low skill levels in the public and private sectors and of various types of analyses seen as most appropriate for increasing labor market efficiency. This handbook was developed to assist teachers of secondary agricultural cooperative training with related instructional periods and to assist students in

developing the civic and social aspects of their lives. The contents of the handbook are intended as a guide for teachers in leading group discussions with their class members, selecting appropriate discussion topics, choosing a suitable method of presenting the information, and increasing interest and active participation of class members. The first 16 pages in the handbook contain instructions on conducting group discussions and the presentation of information to students. Following this introduction, the handbook contains 85 topics of information that should be of value to students regardless of the occupation for which they are training. Each topic has a similar format that includes topic name, objective, references, student activities, teacher activities, questions and answers, and information sheets. Brief answers appear under each question in the handbook, and additional information is provided for each question in the information sheet. Some of the topics covered include the following: finding a job, preparing for interviews, holding a job, employee-employer relations, social skills, personal appearance, sources of credit and interest rates, Social Security, income tax returns, awards, Future Farmers of America, business records, merchandise planning, and safety on the job. This work is designed to help cooperative agricultural students (especially in Texas) to gain a better understanding of some principles that are fundamental for successful entry into the world of work. The workbook provides information needed by students to help them narrow the possible career choices that are appropriate to the individual. Also, activities are suggested that will provide experiences to help students identify career choices. The activities in the book are correlated with selected topics from the Group Instruction Handbook. The 35 topics in this workbook are self-contained, each having an information sheet, activities, and questions. Illustrations are provided for some of the topics as well as blank information forms that are to be completed by the student. Some of the topics covered in this guide include the following: choosing a career, personal qualities for the world of work, occupational requirements, the agricultural world of work, finding a job, preparing for interviews, evaluating job applicants, holding a job, employee-employer relations, social skills, personal appearance, improving conversational and speaking abilities, sources of credit and interest rates, Social Security, income tax returns, and agricultural mathematics. This course of study is designed for the vocational agricultural student enrolled in an agricultural cooperative part-time training program in the area of milk processing occupations. The course consists of 11 units, each with 4 to 13 individual topics that milk processing plant employees should know. Subjects covered by the units are the following: the milk processing industry, nutritional properties of milk, microbiology and sanitation, milk quality and control, milk processing, by-products and specialties, plant equipment maintenance, electrical power and refrigeration, plant management, and plant maintenance. Each of the units includes an assignment sheet (which contains an objective, references, questions, and activities), and information sheets. Following the 11 units, answers are provided for the questions which appear earlier in the text. Additional materials include topic tests in true-false, matching, and other objective formats, and answers for these tests. (KC)

This course outline for industrial electronics, one of a series for teaching vocational industrial shop subjects in public schools, includes basic skills and technical information for the course. It should be supplemented with other complementary and necessary areas of related instruction. Fifteen major blocks, divided into 2 years of instruction, cover these topics: orientation, electrical physics, electrical units, electrical measurement, inductance and capacitance, AC power supply, transformers, amplification, oscillators, reception, transmission, circuitry

and instrumentation, computer technology, optonics, and business of electronics. Each major block is comprised of two to six minor sections, each headed with a concise statement on task and aim. An outline of information and task detail, suggestions for teaching, and a list of references and aids are provided for each subsection. Appendixes include a bibliography containing references, vocational instructional services references, supplemental references, slides, films, and filmstrips; a suggested list of attitudinal objectives; and information on teaching methods. Materials, Learning Activities, Pests, Plant Pathology, Secondary Education, Tests, *Vocational Education

Designed for students enrolled in the Vocational Agricultural Cooperative Part-Time Training Program, this course of study contains 13 units for crop farm employees. Units include (examples of unit topics in parentheses): introduction (opportunities in farming, farming as a science, and farming in the United States), farm records (keeping farm records, and using records in farm management), farm machinery—maintenance and operation (proper use of machinery and equipment, and maintenance of power machinery and equipment), farm structures and equipment (maintenance of farm structures and equipment, and building and maintaining farm fences), crop selection (important factors affecting the choice of crops), land preparation (importance of a good seedbed, row crop seedbed preparation, and land management practices), fertilizers (plant nutrients and their functions, types of fertilizers, and applying fertilizers), irrigation (importance of irrigation, sources of water and principal methods of irrigation, and irrigation management), weed control (importance of weed control, classification and identification of weeds, and control by mechanical and chemical methods), insect and pest control (safety, definition and classification of an insect, management, and insecticides), diseases and control (definition and classification of diseases by pathogens, principles of plant disease control, and chemical control), harvesting equipment (cotton pickers and strippers; corn snappers and pickers; corn combines; and forage harvesting equipment), and major crops (cotton, corn, forage and hay crops, grain sorghum, peanuts, rice, and small grains). Introductory materials include a course outline and a list of supplementary references. Provided for each unit topic is an assignment sheet that presents the objective, a list of references, and a list of questions and activities; and information sheets with diagrams and drawings. Other contents include answer sheets for the questions and activities, tests on each topic, and answer sheets for the topic tests. (YLB)

Vocational Agriculture Handbook for Agriculture Cooperative Training.

Texas A and M Univ., College Station. Vocational Instructional Services.

Pub Date—Jul 81

Note—106p.

Available from—Vocational Instructional Services, Texas A and M University, F. E. Box 182, College Station, TX 77843 (\$3.00).

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Advisory Committees, *Agricultural Education, *Cooperative Education, Employment Programs, Federal Legislation, Guidelines, Instructional Materials, Occupational Safety and Health, *Program Development, *Program Implementation, Program Improvement, Public Relations, Secondary Education, Student Evaluation, Teaching Methods, Two Year Colleges, *Vocational Education, *Work Experience Programs

Identifiers—Future Farmers of America, Texas

This handbook was designed to assist school administrators, vocational administrators, vocational agricultural teachers, and area consultants of vocational agriculture in developing, implementing, and improving an agricultural cooperative training program (especially in Texas). The handbook, which presents information in a narrative format, contains 17 sections. The sections cover the following topics: agriculture cooperative training, establishing an agricultural cooperative training course, minimum standards for unit allocation in a program, selecting students, selecting training stations, student placement, employer-employee agreements, the advisory council, instructional materials, teacher visits to training stations, student evaluation, agriculture cooperative training and the Future Farmers of America, teaching related instruction, public relations for agriculture cooperative training, reports for agriculture cooperative training, labor laws, and general information (e.g., safety, employment programs, and legislation). Sample forms are included in the handbook, and a suggested calendar of events is supplied. (KC)

Teaching Listening and Speaking Skills to Eng-

lish-as-a-Second Language (ESL) Adults. October 1 - December 31, 1983.

Lancaster-Lebanon Intermediate Unit 13, Lancaster, Pa.

Spons Agency—Pennsylvania State Dept. of Education, Harrisburg.

Pub Date—Dec 83

Note—93p.; Parts of the appendix may not reproduce well due to light type. Presented at the National Adult Education Conference (Philadelphia, PA, December 3, 1983).

Pub Type—Guides - Classroom - Teacher (052) - Speeches/Meeting Papers (150)

EDRS Price - MF01/PC04 Plus Postage.

Descriptors—*Adult Basic Education, Adult Education, Adult Programs, Adult Students, Classroom Techniques, Cloze Procedure, Communication Skills, *English (Second Language), Instructional Materials, *Language Skills, Learning Activities, *Listening Skills, Program Implementation, Pronunciation, Reading Skills, Resources, Second Language Learning, *Second Language Programs, Skill Development, *Speech Skills, Student Characteristics, Teaching Methods Identifiers—310 Project

This volume consists of the handouts designed to be used along with the English-as-a-second-language (ESL) program that was presented during a one-and-a-half hour presentation entitled "Teaching Listening and Speaking Skills to ESL Adults." Presented first are a brief outline of the content of the presentation and a summary of its evaluation by the workshop participants. The remainder of the volume consists of 22 handouts devoted to the following topics: the ESL adult; questions and answers for the ESL teacher; guidelines for teaching ESL classes; listening and speaking skills; pronunciation, stress, and intonation; teaching English pronunciation; types of student drills; conversation starters for learning from foreign students; audio and speaking activities to develop listening and speaking skills; games and activities for the ESL classroom; nine different ways to teach reading; tips on teaching reading to limited-English speakers; snap reading, using the Cloze procedure to teach reading; teaching writing; ESL communication skills; and ESL teacher training materials. Concluding the guide is the form that was used to evaluate the training session. (MN)

Identifiers—*Linkage

A study reviewed research on interagency relations involving vocational education and examined a local vocational agency and some of its linkages. It also determined what further research is needed to facilitate mutually advantageous interagency arrangements. The study used a dyadic perspective. An analytic model of interorganizational behavior, the Van de Ven model, was selected from the theoretical literature and used to analyze published reports of interorganizational relationships (IORs) and to design and conduct the field site study. The field site study focused on North Central Technical College in Mansfield, Ohio and its collaborative relationships with a secondary vocational school, regional medical facility, and an economic development consortium with emphasis on training. The application of the theoretical model to the three field site dyadic relationships supported the viability and usefulness of the model. The model was useful as a tool for understanding interorganizational causes and effects in all three cases. Factors found to be important in IORs included resource incentives, interdependency, commitment, a positive climate, and coordination. (Appendixes include the data framework for the field study, data summaries, and a supporting statement on interagency coopera-

tion between vocational education and other state agencies.) (YLB)

Descriptors—Access to Education, Audiovisual Instruction, Computer Oriented Programs, Conferences, Delivery Systems, *Educational Innovation, Electronic Equipment, *Extension Education, *Inservice Education, Instructional Films, Outreach Programs, Postsecondary Education, Professional Continuing Education, Satellite Facilities, Teacher Educator Education, Teacher Workshops, Teaching Methods, Technological Advancement, *Telecommunications, Teleconferencing, Telecourses, Telephone Communications Systems, Telephone Instruction, Television, *Training Methods, Videotext, *Vocational Education

Identifiers—National Academy for Vocational Education OH, National Center for Research in Vocational Education

This study was conducted to help the staff of the National Academy for Vocational Education at the National Center for Research in Vocational Education to determine what methods of electronic communications technology would be feasible for providing inservice training for vocational educators throughout the country. It was determined that the use of such technologies would be helpful in order to serve more clients in more locations at lower costs, especially in a time of rising travel costs and decreasing educational budgets. The technologies addressed in the study were audiotape, telephone, radio, videotext, freeze-frame, electronic blackboard, videotape, videodisc, television, computer, and computer-based instruction. The results of this feasibility study indicate that potential clients' order of preference for a conference was (1) conference out of state, (2) teleconference in state, (3) videotape, (4) telephone conference, (5) audiotape, and (6) proceedings. Based on client preferences and the National Academy's goals for providing distance training, the following technologies were recommended for immediate adoption: a telephone lecture series supplemented with slides and question-and-answer sessions; ad hoc telephone conferences; videotapes of workshop activities and lectures; ad hoc satellite video-conferences with two-way audio for participant questions; more videotape equipment; and satellite disks to receive satellite-transmitted video conferences at the National Center. (Appendixes to the report list vendors, National Center library resources, associations, consortia, and networks.) (KC)

Robotics and Office Automation: Implications for Vocational Education.

Ohio State Univ., Columbus. National Center for Research in Vocational Education.

Spons Agency—Office of Vocational and Adult Education (ED), Washington, DC.

Pub Date—84

Contract—300-83-0016

Note—30p.

Pub Type—Reports—Research (143)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—Automation, Employment Projections, Futures (of Society), *Industry, Labor Needs, Manufacturing, Manufacturing Industry, Office Machines, *Office Management, Office Occupations Education, Postsecondary Education, *Robotics, Secondary Education, Technical Education, Technological Advancement, Trade and Industrial Education, *Vocational Education, *Word Processing

Directed to individuals responsible for program planning in vocational education at the national and state levels, this review and synthesis of technological developments in robotics and office automation identifies the potential demand for skills in these

technologies in the next 3 to 5 years. The procedures for the study are described in the first chapter. Chapter 2, on robotics, begins with a definition. A discussion of usage patterns includes information on influences on usage (price of labor versus capital investment, cost, interface, assembly) and projections of usage. A section on training implications for vocational education offers information on skills and training requirements and suggests that a significant demand for newly trained robotics technicians will not develop. Chapter 3 on office automation begins with a definition and then discusses the use of technology and influences on the office automation equipment. A section on training implications for vocational education at the secondary and post-secondary levels discusses the need for word processing training for entry-level personnel and retraining needs for the acquisition of higher-order skills in analysis, comprehension, and logical thinking. Hull, William L. Adams, Kay A.

A System Design for Evaluating Vocational Education Research and Development.

Ohio State Univ., Columbus. National Center for Research in Vocational Education.

Spons Agency—Office of Vocational and Adult Education (ED), Washington, DC.

Pub Date—84

Contract—300-83-0016

Note—97p.

Pub Type—Reports—Evaluative (142)

EDRS Price—MF01/PC04 Plus Postage.

Descriptors—Data Collection, *Educational Research, *Evaluation Methods, Models, Postsecondary Education, *Program Development, Program Effectiveness, *Program Evaluation, *Research and Development, Research Methodology, Secondary Education, *Vocational Education

This feasibility study contains a design for evaluating vocational education research and development (R & D). The study developed a model for evaluating vocational education R & D based on legislative frames of reference for research, exemplary projects, and curriculum development. Called an Impact Tracer Model, the program is based on information and observations taken from distribution records of 308 vocational education R & D products, utilization data from 12 exemplary products distributed nationwide, and impact data from 6 field sites. The five-stage model consists of needs assessment, product development, product dissemination, product use, and product impact. Some of the conclusions reached through the study are the following: (1) distribution data are easier to acquire and less expensive to obtain than product use or impact data; (2) most research coordinating unit directors are willing and able to provide distribution data; (3) superficial data on use can be obtained by mail, but detailed documentation requires observation or interview; (4) baseline measurements should be established when assessing impact; (5) interactive methods are necessary for collecting impact data; and (6) data on product use and impact are collected by few states at present. The study recommends that a comprehensive and continuing vocational education R & D evaluation system be implemented in phases beginning with the collection of distribution data on all qualified R & D products. The appendices include survey instruments and a conceptual framework for assessing impact. (KC)

Identifiers—Vocational Education Dissemination Conference 1983

This document reviews the activities of a conference on "Disseminating for Tomorrow's Voc Ed." The conference featured tools, techniques, information, examples that can be used to promote good dissemination, use of research, and developmental results. Considerable emphasis at the conference was given to topics and activities related to microcomputer hardware and software applications for vocational education disseminators and change agents. Following the sequence of the conference agenda, approximately 70 brief summaries of small group workshops and large group sessions are reported. Appendix A contains extensive samples of handouts and materials mentioned in many of the summaries. Additionally, to encourage and facilitate continued dialogue and exchange of information as well as dissemination of resources and ideas, a list of all conference participants with contact information is provided in Appendix B. Transition Patterns between Education and Work.

Ohio State Univ., Columbus. National Center for Research in Vocational Education.

Spons Agency—Office of Vocational and Adult Education (ED), Washington, DC.

Pub Date—Jan 84

Contract—300-83-0016

Note—154p.

Pub Type—Reports—Research (143)

EDRS Price—MF01/PC07 Plus Postage.

Descriptors—*Career Choice, *Educational Attainment, Educational Research, *Education Work Relationship, *Employment Patterns, Graduate Surveys, *High School Graduates, Postsecondary Education, Secondary Education, Student Educational Objectives, Vocational Followup

A study investigated those transitional patterns that account for substantial numbers of young people moving from secondary education to employment. Data came from the National Longitudinal Study of the High School Class of 1972; and the National Longitudinal Survey of Labor Market Experience, Youth Cohort, including high school transcripts of a subsample. Large numbers of students began postsecondary education but did not earn degrees. Often the interruption was followed by going to work. The availability of nearby community colleges led to higher attendance. Socioeconomic status, gender, and race were related to choice of pathway. Choices were also influenced by significant others, particularly parents and close friends. Few students cited high school teachers and counselors as important influences. The choice of postsecondary education as a pathway was related to the high school experience; the higher the high school achievement, the higher the educational level the student generally completed. Outcomes of the non-postsecondary path were predominantly lower-skilled craft and service jobs. For vocational students, postsecondary work tended to lead to professional/technical and craft occupations. On-the-job training was the predominant kind of postsecondary education. Post-high school training, incomplete pathways, and transitional decisionmaking were recommended for policy attention. (YLB)

Descriptors—Classroom Techniques, *Educationally Disadvantaged, Educational Resources, *In-

service Teacher Education, Instructional Materials, *Material Development, Pamphlets, Secondary Education, *Teaching Methods, Vocational Education, *Vocational Education Teachers

A project developed an inservice brochure and a summary booklet that defined the conditions that affect academically disadvantaged vocational students in an effort to increase vocational educators' awareness of what it is like to be an academically disadvantaged student. The publications also identify how these students learn and illustrate the techniques and strategies needed to teach special students. Consultants from the Pennsylvania Bureau of Vocational Education also identified the modifications in curriculum, facilities, and teaching strategies needed to help disadvantaged students succeed in the classroom. This information was also included in the brochure. Appendix A, "Academically Disadvantaged Students; A Vocational Teacher's Guide," defines the academically disadvantaged students, offers information on identifying them, suggests instructional techniques to help these students succeed, and describes appropriate learning materials. Appendix B, a booklet of 20 pages, is titled "The Student with Special Needs; a Guide for Vocational Educators," and tells how to identify students with specific handicaps, suggests teaching strategies, and lists additional resources. A project developed six inservice brochures and a summary booklet that defined the handicapped conditions that affect vocational students in an effort to increase vocational educators' awareness of what it is like to be a special student. The brochures also identify how students with specific handicaps learn and illustrate the techniques and strategies needed to teach special students. Consultants from special education and vocational education also identified the modifications in curriculum, facilities, equipment, and teaching strategies needed to help special students succeed in the classroom. This information and helpful state and local special needs resource agencies were also included in the brochures. The six brochures and summary booklet are appended. The brochures provide information on identifying the handicapped student, teaching strategies, and a list of additional sources of help for emotionally handicapped, hearing impaired, learning disabled, mentally handicapped, physically handicapped, and visually impaired students. The summary booklet, "The Student with Special Needs; a Guide for Vocational Educators," tells how to identify students with specific handicaps, suggests teaching strategies, and lists additional resources. Descriptors—Adult Vocational Education, Curriculum, *Disadvantaged, *Educational Resources, *Information Dissemination, Information Sources, Instructional Materials, Material Development, *Networks, Newsletters, Postsecondary Education, Secondary Education, Teaching Methods, *Vocational Education, *Vocational Education Teachers

The purpose of a project was to form a curriculum network whereby information, services, and materials related to disadvantaged persons could be disseminated directly to vocational personnel. Programming information, curriculum materials, instructional resources, exemplary approaches, and evaluation strategies that have worked effectively with disadvantaged learners were solicited from the educational community. Sources were network members, the Inservice Instructional Resource Team from Penn State University, the Pennsylvania Bureau of Vocational Education, the Division of Occupational and Vocational Studies at Penn State, and the Pennsylvania Association of Vocational Education Special Needs Personnel. A curriculum information network was formed consisting of 1,300 superintendents, principals, directors, counselors, and teachers. Six issues of a newsletter entitled the Curriculum Information News were developed. Each newsletter consisted of two sections—descriptions of innovative techniques, exemplary programs, and curriculum materials with name and address of the developer and a special report on one of six topics: a definition of disadvantaged persons, identification of disadvantaged learners, reading as a vocational subject, mathematics in vocational education, limited-English proficiency, and disadvantaged adult learners. (Appendixes include the six newsletters and an article describing the project.) (YLB)

Note—241p.

Pub Type—Reports - Evaluative (142)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Behavioral Objectives, Career Choice, Career Development, *Career Education, Career Exploration, *Course Content, *Curriculum Development, Elementary Secondary Education, Occupational Information, *State Curriculum Guides, Vocational Education

Identifiers—*Texas

The purpose of this study was to make an assessment of current occupational investigation curricula at the local level in Texas and to develop and validate terminal performance objectives and enabling objectives. A questionnaire was developed and administered to 80 experienced occupational investigation teachers at a special group session and by mail to an additional 35 teachers. The surveys gathered information on what subject matter instructors were teaching in the classroom, the amount of time spent on each area, the strategies they were using, the benefits of using occupational investigative courses, use of advisory committees and community resources, and suggestions for changes in existing curricula. By using input gathered in the assessment survey, a foundation of instructional objectives was established. These data and additional objectives formulated through a literature search were used to establish a core curriculum. These objectives were then set up in the form of a survey instrument that was used by teachers, students, and state and local advisory committee members to validate the objectives. The final phase of the project consisted of ranking the terminal performance objectives and the enabling objectives and writing and disseminating a curriculum outline. (A copy of the curriculum outline is included in this report.) (KC)

This issue contains materials, about and for women, which have been produced as part of the United Nations Decade for Women. Included are presentations made at the Asian-South Bureau of Adult Education Conferences and other congresses, conferences, and meetings held to discuss women in developing nations. The first three papers deal with the status and role of women in development; the impact of aid, development, and technological change on the status of women in developing nations; and the failure to take women seriously into account as part of the developmental process. Extracts follow from "Links for the Chain," a report of nonformal education involving women in South Asia. The next paper concerns women's unequal position in economic development. Country reports are provided on nonformal education for, and by, women in Australia; nonformal education for women in Malaysia; women's education in Japan; and aspects of women's lives in Thailand. The South Pacific Commission's monthly news of activities (March, 1983) precedes the final papers on a new international economic order that incorporates women into future developmental strategies. Descriptors—*Dropout Characteristics, *Dropout Prevention, *Dropout Programs, Dropout Rate, Dropout Research, *Dropouts, Educational History, Educational Needs, Employment Problems, *Potential Dropouts, Program Evaluation, Program Implementation, *Program Improvement, Secondary Education, Statewide Planning, Youth Employment

Identifiers—West Virginia

This guide is intended to provide teachers and administrators, especially in West Virginia, with information about high school dropouts, their characteristics, and ways to retain potential dropouts in high school. A pretest and answer key precede the text of the report. The first section presents an overview of the dropout problem and its consequences, such as the dropout's greater level of unemployment and lower earnings. In the second section, factors affecting attendance and enrollment are listed, and teachers are given methods for identifying potential dropouts. Checklists of characteristics and worksheets are provided for teachers to identify high-risk students. There is a report summary on dropouts in West Virginia, 1981-1982. The third section contains suggestions for preventing students from dropping out, such as tutoring, counseling, work-related schemes, alternative education, parent involvement, student-centered approaches, and other low-cost dropout prevention activities. The fourth section presents methods of evaluating the success of dropout prevention programs, while the fifth section consists of the results of a survey of dropout prevention activities in West Virginia in 1983. Competencies Identification for Robotics Training.

Pub Date—5 Dec 83

Note—25p.; Paper presented at the American Vocational Association Convention (Anaheim, CA, December 5, 1983). Broken print may affect legibility.

Pub Type—Reports - Research (143) — Speeches/-

Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Automation, *Job Analysis, *Job Skills, *Manufacturing, Manufacturing Industry, Occupational Information, Paraprofessional Personnel, *Robotics, *Technical Education, Trade and Industrial Education, Vocational Education

A study focused on the task of identifying competencies for robotics training. The level of robotics training was limited to that of robot technicians. Study objectives were to obtain a list of occupational competencies; to rank their order of importance; and to compare opinions from robot manufacturers, robot users, and robotics educators concerning the degree of importance of the competencies identified. Responses to mailed questionnaires identified 94 competencies, 11 of which were deleted because respondents considered them less important. The remaining 83 competencies were categorized into basic skills and five job functions: operation, application, programming, installation, and maintenance for robot technicians. A coefficient of agreement statistics was used as the evaluation criterion for determining the degree of importance of competencies identified. The results indicated a very high and significant degree of agreement ($A=0.93$) among manufacturers, users, and educators on the importance of all competencies. Maintenance was perceived as by far the most important job function, followed by operation. Programming and installation were tied for third place. Application was least important. (Sixteen pages of exhibits, including data tables, are appended.) (YLB)

Identifiers—Pennsylvania

This study was conducted to develop a list of basic consumable and refundable supplies to be used in a secondary agricultural production mechanics laboratory program in Pennsylvania. A total of 72 surveys were sent to selected teachers: 24 in the area of woodworking, 24 in the area of metal working, and 24 covering all other areas of agricultural mechanics laboratory consumable supplies. The instrument was designed so that teachers could provide information about their department, community, units of instruction, teaching background, and amount of consumable supplies used. A total of 41 usable replies were used in data collection. Both tables and verbal analyses were prepared listing the variables, number of responses, mean responses, the standard error, and the ranges. A basic list of consumable and refundable supplies was developed. An extensive description of nonsupply variables was compiled, describing the community, department, and teachers of programs in the study. However, few generalizable conclusions could be formed from this data. It was recommended that lists be developed for other areas of agricultural production mechanics and that the lists be updated as technology changes. (Author/KC)

Identifiers—Linkage

This handbook offers vocational educators several suggestions for becoming an active partner in their community's economic development activities. It is intended as a tool to use for coordinating activities between vocational educators and representatives of industry, government, and labor. An introduction offers background information, including a list of benefits to vocational education institutions on vocational education/community collaboration. The section on forming the partnership with those involved in economic development activities describes these steps: preparation, assessment of the existing situation, development of goals and objectives, and tapping of resources. The role and responsibilities of the industry/education coordinator are also outlined. The next section discusses building responsiveness within vocational education to meet community or industrial needs. The next section outlines action plans for supporting economic development. These examples represent area vocational schools, community colleges, and public secondary schools. Information is provided for each institution on establishing lines of communication; person(s) responsible for coordination; establishing lines of communication; person(s) responsible for coordination; major community organizations involved; sources used for needs assessment; key factors in relationship with business, industry, and labor; key factors in successful training programs; and the contact person. Seven publications are annotated as recommended resources on linkage with economic developers. (YLB)

Philosophical Perspectives as a Dimension of the Psychological Modality in the Theory of Adult Development.

Pub Date—[80]

Note—17p.

Pub Type—Opinion Papers (120) — Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Adjustment (to Environment), Adolescents, *Adult Development, Adults, *Aging (Individuals), Attitude Change, Beliefs, *Developmental Stages, Individual Development, Middle Aged Adults, Midlife Transitions, *Moral Development, Older Adults, *Philosophy, Self Actualization, *Values, Well Being

The long-held belief that a person became an adult at about 20 years of age and, henceforth, remained psychologically and physically on a plateau until old age, has recently been found unacceptable in the light of research contributed by developmental psychology. Adult development may be viewed as the function of the interaction of the psychological, sociological, and the physical. One important psychological component is an individual's perspective or philosophical view. The philosophical viewpoint undergoes some alteration during the passage through adult life. These modifications may be a result of reflections and/or other forces that give impetus to realignment of metaphysical views. Various researchers have examined the values of groups of people from adolescence through old age and have found some significant changes. According to some researchers, younger persons generally appear to value love and self-absorption, while those who are middle-aged strive for productivity and care of others. The aged tend to hold values that are less material as they face a disengagement from life; however, few adults ever actually attain a state of total disengagement. Further research needs to be done using computer simulation to test this model against the changes of adult perspective through the lifespan. (KC)

Identifiers—*Quality of Working Life

Based upon a review of literature and on-site interviews and observations at nine firms that are recognized leaders in the development and implementation of quality of work life (QWL) activities, this report examines implications of QWL developments for future skill requirements and their potential consequences for public vocational education policies and programs. The report is not a handbook or a guide for changing current practices but is intended to provide background information to familiarize vocational educators with QWL developments in the workplace. The report focuses on two major sets of educational implications. First, it discusses the implications of QWL developments for the content and instructional processes of vocational education. It suggests that to function effectively on high-involvement participative work settings, workers and managers not only need good basic skills and technical job skills, but they will also increasingly need improved skills and knowledge in group problem solving and in the organization and management of production. The report discusses examples of skills and knowledge in these two broad areas and examines why they are needed in business and industry. The second major focus of the report examines what new participative management techniques may do to improve the nation's schools, especially the management and organization of vocational education. The report discusses how QWL practices in industry must transfer to a better way of learning and a new high-involvement participative approach to schooling. Appendixes to the report contain a list of skills applicable in participative work settings and summaries of the site visits to the nine companies studied. (KC)

This yearbook deals with technician education. Included in a section on new issues, problems, and proposals for technician education are the following papers: "High Technology Challenges the Vocational-Technical Curriculum," by Walter J. Brookling; "Assessment of Technical Competency," by Gordon C. McMahon; "Industry and Education Cooperation Serves America's Needs," by Catherine P. Warmbrod; "The Ohio Technology Transfer Organization and Its Role in Two-Year Technical Education," by Kim Bonewit; "Contracting with Business and Industry: Use Your Community Resources," by Chuck Gold; and "Professional Development for Vocational Educators," by James L. Hoerner and E. Lynn Suydam. The second section

of the paper consists of case studies of programs in various schools, including the robotics technology program at Macomb Community College, the laser and electrophysics technology program at North Central Technical Institute, the forest technician program at the State University of New York College of Environmental Science and Forestry at Wanakena, the pharmacy technology program at Santa Ana College, the business technology degree program in merchandising at J. Sargeant Reynolds Community College, and the leisure service careers program at Moraine Valley Community College. The remaining three sections of the yearbook consist of directories of institutions, technologies, and officials involved in technician education; a list of professional organizations concerned with technician education; and a bibliography of works dealing with technician education. These are transcripts of joint Congressional hearings on technology and employment. Objectives stated for the hearings are to identify how technology is leading to changes in the nation's work force and work environment and to make recommendations for governmental action that will ease the adjustment of the work force and workplace to technology, while promoting employment, improved productivity, and economic growth. Eight panels of witnesses provided statements, prepared statements, exhibits, papers, and supplemental materials on (1) overall perspectives and trends; (2) employment projections; (3) demographics of the work force; (4) automation in factory and office; (5) quality of the workplace; (6) training/retraining; (7) regional, state, and local perspectives; and (8) future perspectives. Witnesses include university professors, United States Representatives, and individuals representing the AFL-CIO; Center for Policy Alternatives, Massachusetts Institute of Technology; Office of Technology Assessment; Federal National Mortgage Association; Urban Institute; Scientific Manpower Commission; The Conference Board; Bureau of Social Science Research, Inc.; National Commission for Employment Policy; American Federation of State, County, and Municipal Employees; United Steelworkers of America; and American Vocational Association. Improvement, Educational Needs, *Educational Planning, *Federal Legislation, Federal Programs, Federal State Relationship, Financial Support, Futures (of Society), Government Role, Hearings, Postsecondary Education, Program Improvement, Secondary Education, *State Federal Aid, State Programs, *Vocational Education

Identifiers—*Congress 98th, Proposed Legislation

This document, a transcript of a House of Representatives subcommittee hearing on a Reagan Administration proposal, discusses consolidation of existing federal vocational and adult education programs, simplification of requirements for states and other recipients participating in federal vocational and adult education programs, authorization of certain state and national programs for the development of vocational skills and basic skills in the work force that will improve productivity and economic growth, and authorization of states to consolidate funding for such programs into block grants to the states in an attempt to increase efficiency and productivity. At the hearing, testimony and a prepared statement were given by T. H. Bell, U.S. Secretary of Education, and questions were answered by Dr. Robert Worthington, Assistant Secretary for Vocational and Adult Education. Secretary Bell and Assistant Secretary Worthington testified that their bill is designed to accomplish these four major objectives: (1) consolidation of existing vocational and adult education programs into a single, flexible program of grants to the states; (2) simplification and reduction of administrative burden at all levels of government, so that states can use more of their federal dollars to provide educational services to students; (3) enhancement of the role of vocational and adult education in assisting local, state, and national economic development; and (4) refocusing the federal role to concentrate on research, development, dissemination, demonstration, and other national leadership activities rather than on intervention in educational decision making at the state or local levels. They emphasized that the bill would cut through red tape, streamline paperwork, permit wider discretion to the states, and make it easier to harmonize the use of state and federal funds, while at the same time preserving the emphasis on vocational education and continuing to fund adult basic education programs. (The text of H.R. 2940 is included in the document.) (KC)

Identifiers—Job Training Partnership Act 1982, *Utah

Despite the fact that, of all the 50 states, Utah has the highest percentage of state and local government expenditures for education and the highest proportion of adults who have graduated from high school, one out of every five adults in Utah lacks basic literacy skills. At present, the following adult literacy programs offer instruction in basic skills to Utah residents: a community education program, an adult high school program, an adult basic education program, an adult refugee education program, prevocational programs at five area vocational schools and two technical colleges, and a Job Training Partnership Act program. Although no single source of authority or responsibility for adult literacy programs exists in Utah, the quality of the individual programs is good. Serious logistical problems exist, however, in getting enough of the scattered population in rural areas together to conduct a program. An expanded adult literacy program would un-

doubtedly lower unemployment and raise earnings in Utah. With the state pressured to expand and improve schools and colleges, however, adult programs remain a low priority. (Eleven tables depicting program enrollment and impact data are appended.) (MN)

Identifiers—*National Adult Literacy Project

Despite the fact that military careers require much higher levels of literacy than do comparable civilian careers, the range of literacy levels of enlistees is roughly representative of the abilities found among high school graduates. In response to the need to raise the literacy levels of their personnel, the Armed Forces have paid increasing attention to literacy instruction in recent years. Whereas literacy programs once followed a master apprentice training model that emphasized decoding, recent military instructional programs focus on literacy training that takes into account the specific requirements of the job to be performed. The Navy's Job-Oriented Basic Skills Program, the Army's Job Skills Education Program, and the Air Force's Job-Oriented Basic Skills Assessment and Enhancement System all have been based upon the actual tasks personnel will have to perform. Also currently underway are several military-sponsored research efforts in literacy instruction that make creative use of computer and videodisc systems. (MN)

Identifiers—*National Adult Literacy Project

A recent survey of retailing firms, ranging from single stores to nationwide chains, showed that the most significant human resources challenge facing these organizations is how to attract and retain qualified employees. Faced with the many changes in the retailing industry and in the composition of the work force that have taken place over the past three decades, retail firms are beginning to question how to select better employees and how to improve worker performance. Although some remedial courses in mathematics and in communication skills do exist in retail business-run training and management development programs, remedial training is not generally seen as the responsibility of business. Instead, the retailing industry maintains linkages with educational institutions, utilizing programs such as work study and tuition refund. Because industry's views of education have changed over the years, more information is needed about the relationship between industry's employment considerations and the development of basic skills. Possible agendas for research in this area could include ex-

aminations of the reasons for the lack of qualified persons for higher sales and supervisory positions, increased employee turnover, and employee obsolescence and declining job performance. (MN)

Identifiers—*National Adult Literacy Project, Validity Research

While the need for improved literacy in the work force is generally accepted, questions still remain as to what levels of literacy are required for different jobs and who will provide the necessary adult literacy training. To answer these questions, researchers must develop a database of information about literacy needs and deficiencies. Developing such a database, however, is not easily accomplished. Upon discovering that employee performance in one area is unacceptable, employers can take any one of a number of actions that would change the nature of the job in question. In addition, literacy requirements change over time as organizations themselves change. Job analysis and validation are two possible means of assessing the literacy requirements of work. Each method has advantages and disadvantages that must be considered carefully when using them in a large-scale research project. Informal surveys of employers throughout the country indicate that the burden to improve employee quality rests mainly with the educational system. While employers are concerned about the literacy levels of their workers, many doubt whether literacy training by employers is effective. An examination of the remedial training policies of companies such as American Telegraph and Telephone suggests that, for a variety of reasons, employers are generally quite conservative about providing literacy training. Identifiers—*National Adult Literacy Project, United States

By the late 1960s, the most offered courses in American community colleges were remedial reading, remedial writing, and remedial arithmetic. The success of the early efforts in community colleges was marginal at best, as is evidenced by a 1968 study indicating that nearly 90 percent of all remedial students failed or dropped out of remedial courses. By 1977, however, the first national study of American college and university programs for low-achieving students revealed that some programs were achieving success. A national study of college and university programs was conducted in 1982 to discover the magnitude, nature, and level of success of literacy and basic skills programs. Based on this survey, it appears that successful remedial programs exhibit the following 11 characteristics: strong administra-

tive support, mandatory counseling and placement, structured courses, award of credit, flexible completion strategies, multiple learning systems, volunteer instructors, use of peer tutors, monitoring of student behaviors, interfacing with subsequent courses, and program evaluation. The successful programs that were isolated during the study can serve as models that document the learning potentials and capabilities of community college students. (MN)

Most presently existing literacy training programs for inmates in America's prisons are inadequate. Before program planners and developers can remedy this situation, they must be able to obtain accurate information on the numbers of illiterate inmates and the numbers of inmates currently receiving literacy instruction in America's prisons. The establishment of an information clearinghouse and the development of standard definitions and measures to facilitate the collection and dissemination of such information would be important first steps in the effort to improve literacy instruction for inmates. Included among the many issues that must be addressed by planners of prison literacy programs are the lack of consistent federal and state policies toward rehabilitation; the lack of adequate funds, facilities, and equipment; the lack of trained professionals in the field; and the lack of comprehensive, integrated literacy programs. On the positive side, a number of exemplary prison literacy training programs do exist. Some of the key components of these exemplary programs are development of a coordinated structure; provision of staff training in literacy; utilization of competency-based, integrated curricula; the offering of incentives for inmates; coordination between correctional and community education programs; and increased use of technology. On a daily basis, program developers and implementers must also contend with a number of problems that interfere with their operation, including disregard for the educational needs of inmates, lack of adequate referral and support services, and lack of coordination of penal programs within and among institutions, as well as overcrowded and substandard living conditions. Identifiers—Laubach Method, *National Adult Lit-

eracy Project, *South Carolina

In response to the increasing number of constraints affecting adult education, South Carolina has designed an approach to adult literacy that makes efficient use of limited resources. The program, which has been designed so that it can be adapted to conditions prevalent in local communities, centers around the development of political, social, and financial support in the local community and relies on a diversified financial base that has a mix of public and private funds. While the local adult literacy programs depend heavily on volunteers, a strong management team and a core of paid staff members are also essential to their success. The final phase of the design of local literacy programs should entail a determination of the form of service delivery that will be utilized. While the Laubach Literacy Method is presently employed by the South Carolina Literacy Association, it should be noted that several other approaches are also effective. The most important point to consider in the planning of the local literacy programs is the need to offer services that are appropriate to the needs, schedules, and social characteristics of the group to be served. Also important to the success of a program are efforts to obtain cooperative support from other community organizations. (MN)

Identifiers—*Community Based Education, *National Adult Literacy Project

Large numbers of trained volunteers working in community-based settings are needed if adult literacy programs are to be successful. In addition, adult literacy programs must work in partnership with other community organizations. Particularly necessary are formal linkage agreements with nontraditional organizations such as service and fraternal organizations; community action agencies; and religious, cooperative, and political organizations that address the establishment of literacy programs and deal with issues of funding, public relations, and human resources. In order to reduce significantly the extent of adult illiteracy in the United States, program planners must make volunteerism a national priority and must direct funding at the continuation and expansion of proven pilot programs that serve the client. Furthermore, those communities having the greatest need for adult literacy programs must be targeted and given priority. Rather than spending money on more national conferences and studies of adult learning, planners should initiate local community conferences that would be concerned primarily with the development of local programs. In developing a community-based adult literacy program, program planners need to consider who the program will serve, which strategies will best serve the target population of the program, and exactly how much stability and change are to be encouraged in the program. Once the planners of a community-based adult literacy program have answered these questions, they must determine the educational strategies, management procedures, and program linkages that will be most beneficial to the program's success. In doing this, the planners must consider their options carefully and must realize their need to make informed and definite commitments to their target audience. When deciding on an appropriate balance between change and stability within an emerging adult literacy program, planners must remain aware of the fact that while maintaining stability is a crucial aspect of the management of an organization, particularly in emerging organizations that depend upon credibility among their supporters and constituents for survival, programs that are unresponsive to their environment will not be effective and will eventually lose credibility among these same constituents and sponsors. Finally, the various individuals involved in an organization must balance their particular needs and preferences with those of other persons and with the needs of the organization as a whole. (MN)

Identifiers—*National Adult Literacy Project, Pre-literate Societies

This paper deals with strategies for developing literacy skills in nonnative speakers of English. Discussed in the initial section of the paper are four different categories of English-as-a-second-language (ESL) adults and the basic philosophy that underlies the teaching of literacy skills to adults at all levels of literacy. The special needs of ESL students from preliterate societies and learning activities for use in addressing these special needs are examined. Described next are a series of strategies focusing on meaning that can be used successfully with students who are not themselves literate but who speak a language that has a common written form. A series of activities focusing on patterns are provided for use with ESL students who are well educated in their first language. Concluding the paper are sample lessons from a refugee camp in Southeast Asia and from an adult education center in San Francisco. (MN)

Identifiers—*National Adult Literacy Project

Although English-as-a-second-language (ESL) practitioners are generally making good progress in teaching listening and speaking skills, the entire area of teaching literacy skills to ESL students is barely in the formative stage. The teaching of ESL is further complicated when students are not only lacking in English literacy skills but are also functionally illiterate in their native languages. Educators need to become more aware of the special problems that even the most motivated ESL students face when learning a language that is as difficult to learn as is English. Whereas many ESL programs have been predicated on the notion that students must be orally proficient before they can read English, research shows that reading and speaking can be taught concurrently. To facilitate the teaching of reading and writing in the ESL classroom, educators should provide early and systematic instruction in areas such as phonetic spelling, writing mechanics, structural analysis, study skills, and test taking. In addition, planners of ESL and literacy programs should devote more effort to pooling the resources of smaller local programs to avoid duplication, solicit cooperation from and work together with business and industry, offer counseling services, and provide necessary staff development activities. Identifiers—Community Literacy, *National Adult Literacy Project

Problems facing literacy education include how to attract non-English speaking and illiterate adults to the programs and how to reduce attrition and increase motivation for the students who do come to the programs. One method that could help to solve these problems is "community literacy," an approach to learning in which the curriculum is derived from the needs of students and in which students and teachers are actively engaged in the process of learning and community development. Community literacy could help overcome the learning barriers many literacy/English-as-a-second-language (ESL) students face, such as poor self-image or lack of relevancy of the curriculum to their lives. At present, many literacy programs unwittingly reinforce learning conflicts; for example, some ESL literacy tests have hidden cultural and social assumptions that stereotype the learners. Instead, such materials could be changed to correspond to the actual situations and life issues that students confront. With this new student-developed material, the teacher would use a five-step inductive questioning strategy, moving from asking students specific informational questions to exploring the nature of the problem presented in the text and considering possible actions to change the situation. Because literacy is only one of the many problems adults face, other supportive services should be provided; community sites for satellite centers should be developed; in addition, literacy instruction should be incorporated into existing community programs. Identifiers—*National Adult Literacy Project

During the past 40 years, the definition of literacy and the needs of adult literacy education have changed. Before World War II, adult literacy programs usually focused on teaching totally illiterate adults to read and write at the simplest levels. Later, functional literacy at about the fifth grade level was promoted through the programs. Now, however, a reading level of twelfth grade is needed for adults to function in an increasingly complex technical society. Reading instructional materials can be classified in stages from one to five from a low to an advanced level, with one being simple reading skills such as those acquired by primary grade children, and five being more abstract reasoning skills such as those acquired by the average high school graduate. The amount of time required for adults to pass through these various stages of reading has not been determined, but unless adults have acquired a broad general education, it takes considerably longer than the usual attendance period at literacy programs. If literacy programs are to be successful at raising the reading levels of their participants to a twelfth grade level, more research is needed on how this can be accomplished. More appropriate materials need to be developed, along with diagnostic tests for adult programs. Finally, research is needed to show the influence of cognition on reading and the influence of reading on cognition. Such research efforts can help to prepare adults for the increasingly technical jobs of the future. (KC)

Identifiers—*National Adult Literacy Project

As articulated by President Reagan, the Adult Literacy Initiative has two goals: to raise all adults in the country to a functional reading level and to focus on promoting literacy among adults—not "stamping out" or "attacking" illiteracy. Professionals at the National Adult Literacy Project and Conference considered the problems of adult literacy education, raising eight main issues in their papers. First of all, the speakers emphasized a need to understand better the adult literacy problem in the United States. Closely related to the first concern is the necessity to understand better the need for adults to have different kinds of skills and knowledge for the future. A third issue is the need to have a better understanding of the various delivery systems for adult literacy development, their clients, and their effectiveness. The problems of adults who must learn English as a second language raise issues unique to this population and must be considered separately from the rest of adult basic education. Closely related to the issues surrounding the teaching of English as a second language is the need to understand literacy problems in the United States by comparison to the literacy problems in the rest of the world. An issue of central concern for all of

the presenters is the need to understand the difference between the development of literacy during childhood and in adulthood, while the seventh issue they raised is the need to understand better the use of technology in the development and delivery of adult literacy programs. Finally, the eighth issue concerns the need for a clearly articulated national policy for adult literacy development. (KC)

 Descriptors—*Agency Cooperation, *Cooperative Programs, *Educational Cooperation, Education Work Relationship, Guides, Industry, Postsecondary Education, *School Business Relationship, School Community Relationship, Secondary Education, Vocational Education
 Identifiers—*Industry Education Councils, *Linkage

This handbook contains broad guidelines for increasing cooperation among business, industry, labor, governmental agencies, professionals, parents, students, and educators through the creation of business/industry/education partnerships. The material is designed primarily to provide a framework for building or improving such partnerships or councils rather than to develop a rigid set of instructions for operating councils. Focus is on how to develop community, regional, and state mechanisms to serve as links between the labor force and education. An introduction lists what individuals as well as businesses and industries can do in partnership efforts. The second section on forming business/industry/education councils covers setting objectives, council management, the role of the state coordinator, and council functions. The relationship of the partnership council to other community and educational councils is then briefly addressed. Section 4 discusses several broad categories and examples of council activities, including instruction and curriculum development, resource workshops, inservice training, career guidance, materials and service functions, educational management, shadowing suggestions, and adopt-a-school programs. The final section is a one-page state-of-the-art summary for partnerships among business, industry, and education. The appendix contains an historical perspective for Alabama's business/industry/education partnerships. (YLB)

Intended especially for literacy workers, this monograph discusses the planning and organization of all the various approaches to the delivery of literacy work. It is divided into two main sections. The first part discusses the general principles of planning and organizing; it may be considered theoretical in nature. Its three chapters cover the planning and organization of literacy within the context of development in the Third World, understanding the planning process, and understanding organizations and their design, renewal, and change. Chapter 4 provides the transition to the second, practical part of the monograph. An ideal, fully functioning literacy system is described that is composed of nine subsystems. The nine chapters that follow deal with planning and organizing in relation to each of these nine subsystems: policy and planning, administrative and instructional delivery, technical support, social mobilization, curriculum and materials development, and evaluation. Each chapter describes (1) the planning and organizational objectives of the subsystem, (2) the planner system, and (3) the plan adoption system as defined by the objectives of the subsystem. Possible planning and organizational solutions

are generated. A brief chapter of conclusions and a bibliography end the monograph. (YLB)

 Descriptors—Career Choice, Career Education, *Career Planning, *Information Needs, *Information Systems, *Information Utilization, *Labor Market, Labor Needs, Labor Supply, Literature Reviews, *Occupational Information, Postsecondary Education, Secondary Education

This paper is intended to function as both a major analytic effort and a review of the literature relevant to the establishment of an occupational information system. An introduction is followed by a summary of the legislative history documenting the process by which occupational information has been increasingly recognized as an essential element in the policymaking agenda. Section 3 outlines the conceptual foundations underpinning the use of occupational information. The section includes a discussion of alternative theories of the labor market, interventions that are appropriate in a theoretical context, and the data elements required to implement and monitor such interventions knowledgeably. Theories of vocational decisionmaking are discussed, and an attempt is made to place the need for labor market and occupational data in the context of vocational choice. Section 4 discusses the uses of occupational information for planners and guidance personnel. Anticipated and known benefits of data use in the decisionmaking processes of these user groups are addressed. The fifth section is devoted to the identification of specific data elements necessary in an ideal occupational information system. A conclusion and a bibliography end the paper. Appendixes are author recommendations for data elements for an occupational information system and an annotated bibliography. (YLB)

 Identifiers—Nevada

A study sought to determine what four major populations think about six specific issues relating to vocational education programs. A secondary objective was to determine attitudes about some issues specific to each of the groups surveyed. The four population groups were eleventh grade male and female, vocational and academic students; parents; educators; and representatives of business and industry. All respondents were asked six common questions and other questions specific to the group. Respondents were almost unanimous regarding the importance of schools providing vocational education. Most of the respondents in all four groups indicated that vocational education was either very or somewhat important in attracting new industries. Responses indicated that more money should be spent on vocational education programs. The largest percentage of each group indicated that vocational education prepared young people fairly well for jobs. The adult populations were far more critical than students. Students were also asked about future

plans and program choices. Parents were questioned regarding their children's plans and programs. Teachers were asked why students take vocational education courses. Employers and workers gave vocational education graduates high marks in job performance. (YLB)

Two myths about high technology are that it will be the primary source of new jobs and that it will vastly upgrade the skill requirements of jobs. Evidence does not support these myths. Most new jobs will not be in high tech fields, and technology will reduce the skill requirements. The Bureau of Labor Statistics predicts that high tech occupations will grow rapidly until 1990, but the actual numbers of jobs that will be created are quite small in comparison to other occupational categories. Technology is shaping the future economy by other forces. Robotics, automation, sophistication of some technologies, and movement of jobs overseas will result in job loss. New jobs will be created by technology in production and maintenance of robots. Skill requirements will also be affected. Reduced skills will be needed to use word processing equipment, computers, and cash registers. Educational implications from these changes include the need to increase and strengthen basic education; the need to strengthen the idea of lifelong, recurrent education; and the need to gear training and education toward adaptability and flexibility. Questions and answers about high technology, vocational education, and changes in the nature of work conclude the document. (YLB)

These abstracts summarize 73 research projects that were conducted in Australia during 1982 and 1983 to investigate various issues related to youth employment and unemployment. Included among the topics addressed in the individual research projects are the following: economic developments, education and rural communities; employment (changing patterns in local and regional labor markets); programs (career education, employment creation, income maintenance, school services, training programs, transition, work cooperatives, and work experience); social and technological change; unemployment; youth and education; youth labor markets; and youth unemployment (its analysis, effects, causes, and possible remedies). The abstracts are arranged according to the following four categories: policy analysis and research on social

and educational developments; program proposals, reports, and evaluations; program materials, bibliographies, and reports; and periodicals. (MN)

Identifiers—*Mental Health Workers

A study examined the statewide mental health agency training programs for paraprofessional mental health workers that exist throughout the United States. During the study, researchers contacted all 50 state mental health manpower development offices and requested copies of statewide training programs, instructional materials, training needs assessment studies, and descriptions of unique training developments. Although there was little consensus about training priorities for paraprofessionals in community mental health agency positions, many states indicated that few new staff, whether professional or paraprofessional, had adequate skills for working with severely disturbed, chronically mentally ill clients. In addition, most respondents believed that two broad subject areas were important: case management skills necessary for developing linkages with community supportive services and skills in developing treatment plans. The ways in which different states have approached the problem of training mental health workers varied considerably.

bly. Included among the training strategies adapted by different states were the following: the development of statewide agreements with colleges or universities to define the conditions for training agency workers, the use of training materials for specialized subjects geared to several levels of staff, and the establishment of decentralized responsibility for developing training programs and materials. (This publication analyzes the findings of the survey in detail and provides examples of training materials.) (MN)

Identifiers—*Emergency Jobs Appropriations Act 1983

A formal review was conducted to assess the efforts made by federal agencies to implement the 1983 Emergency Jobs Appropriations Act (EJAA). (The EJAA provided emergency supplemental appropriations to provide productive employment for jobless Americans, to hasten or initiate federal projects and construction of lasting value to the nation, and to provide humanitarian assistance to indigent persons.) The review, which examined the way that 18 different federal agencies implemented the EJAA, indicated that the agencies were generally taking appropriate actions to implement the Congressional mandate expressed in the bill. It was determined that the ability of agencies to obligate Title I EJAA funds quickly was dependent, in large measure, upon the types of programs involved, with welfare-type, grant-in-aid program funds being obligated more quickly than funds for facility construction, renovation, and maintenance. By the end of 1983, a total of \$933 million or about 43 percent of the Title I funds were obligated. Because no uniform, comprehensive reporting requirements exist for the number, nature, or duration of jobs created with EJAA funds, data in this area were incomplete. It appeared, however, that the agencies examined have generally allocated funds in accordance with the targeting provisions of the act. (MN)

Identifiers—*United States (South)

The vocational education programs in the 14 Southern Regional Education Board (SREB) member states were examined in order to obtain an overview of the objectives of vocational education and the coordination of vocational programs between secondary and postsecondary institutions in those states. It was determined that 3.5 million high school students in the SREB region were enrolled in vocational education programs in 1980-81. While the fundamental purpose of vocational education, at least from the federal perspective, is to prepare individuals for gainful employment, many SREB member states have developed their own philosophies and directions for vocational education. Thus, the

policies of different states reflect varying degrees of concern for basic skills preparation, occupationally specific training, on-the-job and cooperative training programs, and exploratory or prevocational education. To maximize the efficient delivery of occupational training, educational policymakers and planners in SREB member states must coordinate the activities of the secondary and postsecondary sectors. The development of adequate coordination among secondary and postsecondary institutions in any one area requires that planners define articulation issues, reassess the relevancy of program offerings to market needs, and address the issues of program capacity and governance. Vocational guidance is a comprehensive, developmental program designed to meet the career development, vocational education, and employment needs of all ages in all communities. Federal legislation emphasizes vocational guidance and counseling programs as essential to the successful placement of individuals in careers. The Vocational Education Act of 1963 as amended in 1976 provides funding for vocational guidance programs; the Office of Vocational and Adult Education (OVAE) provides policy direction, coordination, and leadership in this field. Vocational guidance contributes to meeting both individual and societal needs. As American jobs change, counselors can help people meet the challenge of change. In the future, vocational guidance must assume leadership to ensure that comprehensive guidance programs, services, and activities are an integral part of the vocational education program and take an aggressive role to develop and enhance existing relationships with the private sector. In line with these needs, OVAE is providing leadership through supportive research, coordination, and various kinds of technical assistance. (YLB)

This report presents results of a project to assess the adequacy of existing data sources on the supply of 21 allied health occupations in order to develop improved data collection strategies and improved procedures for estimation of manpower needs. Following an introduction, chapter 2 provides a discussion of the general phases of the project and makes general recommendations for procedures to improve supply estimates and to improve estimations of requirements for allied health personnel. Chapters 3 to 11 contain individual reports and recommendations for each of the 21 occupations within the nine occupational clusters in this study. For each occupation, the discussion includes an overview of the occupation, definition of the population within the occupation, a description and assessment of data sources, and recommendations for estimating the supply within each occupation, current requirements, and future requirements. Each chapter also contains a summary of findings of the interviews conducted with individuals knowledgeable of

CE 038 164

the cluster and personnel-to-population ratios for each occupation for which data were available. (YLB)

Nurse Supply, Distribution and Requirements. 3rd Report to the Congress. Nurse Training Act of 1975.

Health Resources Administration (DHHS/PHS), Hyattsville, Md. Div. of Nursing.

Report No.—HRA-82-7

Pub Date—17 Feb 82

Note—234p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC10 Plus Postage.

Descriptors—Allied Health Occupations, Allied Health Occupations Education, *Employment Projections, Higher Education, *Job Skills, *Labor Needs, *Labor Supply, *Nurses, Nursing, Nursing Education, Occupational Information, Postsecondary Education, Practical Nursing

This report focuses on the supply, distribution of, and requirements for nursing. The first chapter describes the supply of registered and licensed practical nurses. Characteristics of the overall nursing supply are discussed in terms of marital status, age, and employment patterns. Data are also provided on nurses newly licensed to practice, males, and minorities. Projections are made of the supply of registered and licensed practical nurses. Chapter 2 reexamines two approaches for determining requirements for registered nurses: the historical trend-based model that identifies the impact of health system changes on requirements and the criteria-based model that is designed from the development of health care goals. The two sets of requirement projections are compared with four sets of supply projections based on alternative assumptions about the number and types of graduates that might be available. Recommendations are made in chapter 3 for the role of the federal government in support of nurses training and for advanced preparation in nursing. Appendixes, amounting to approximately one-third of the report, include 41 data tables and a list of references. (YLB)

Learning Style Differences: Registered Nurse Students vs. Generic Student Nurses at the Baccalaureate Level.

Pub Date—84

Note—29p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Cognitive Style, *College Students, Curriculum Development, Higher Education, *Nurses, *Nursing Education

This study examined and compared learning style differences between students who were registered nurses working for a bachelor's degree and generic student nurses who were working for a nursing degree as well as a bachelor's degree. The population surveyed included all registered nursing students and a selected number of generic student nurses (126 total subjects). The study controlled for level of program (upper division), sex (female), and educational and work experience (registered nursing students must have received their basic preparation in diploma schools of nursing and generic student nurses must have had a minimum of one year's health and/or nursing work experience). The instrument used was the Learning Style Inventory developed by David Kolb to measure individual learning styles derived from experiential learning theory. Data were analyzed by analysis of variance, repeated measures design. Findings indicated that the groups were similar in learning styles. Registered nursing students and generic student nurses more closely resembled each other as they progressed from junior to senior level. As seniors, both groups tended to become more able to learn by a variety of methods rather than by assuming a permanent learning style. Results of data analyses support similarity rather than diversity of course design as an acceptable base upon which curriculum designed for the education of both types of students can be developed. Descriptors—Adult Education, Career Education, Demography, *Educational Background, Employment Level, *Employment Patterns, Higher Education, *Individual Characteristics, National Surveys, *Nurses, Nursing Education

This report provides data describing the nursing population as determined by the second national sample survey of registered nurses. A brief introduction is followed by a chapter that presents an overview of the survey methodology, including details on the sampling design, the response rate, and the statistical reliability. Chapter 3 provides a summary of the findings from data on 30,375 nurses who represent an 80 percent response rate. Data are relative to the status of nurses as of November 1980. In chapter 4 the registered nursing population is described in terms of demographic characteristics, educational background, employment status of nurses employed in nursing, and characteristics of nurses not employed as nurses. Each section contains a discussion of the topic with textual exhibits and a set of related tables in the back of the section. Appendixes include the questionnaire, information on statistical methods, information on the reliability of sample estimates and calculation of generalized variances, and tables of sampling errors of selected statistics calculated through direct methods. Descriptors—*Academic Achievement, Educational Research, Postsecondary Education, *Questionnaires, Reliability, *Student Adjustment, *Student Characteristics, *Validity, *Vocational Education

Identifiers—Minnesota

A study examined educational adjustment (the personal and environmental compatibility with an educational program) and its relationship to several variables to which it is believed to be related. These variables included measures of satisfaction and satisfaction, several aptitude measures, and a series of demographic variables obtained from student records. Participants in the small validation effort were 96 students from a small, rural area vocational technical institute in central Minnesota in six different programs: all-female, all-male, and mixed-gender. Two questionnaires were developed for use: a student satisfaction (performance) questionnaire and a student satisfaction questionnaire. Results of analyses seemed to support the reliability and validity of the two constructs, satisfaction and satisfaction; the acceptance of the results of the canonical correlation analysis rejected the hypothesis that no relationship exists between the two sets of variables. A constructed measure of educational adjustment was also accurately described by the relationship between the satisfaction and satisfaction variables on a program-by-program basis. (Appendixes include data on factor/item relationships and factor loadings after varimax rotation.) (YLB)

Identifiers—*Massachusetts, *Vocational Education Data System

Various procedures, technologies, and products were developed by the Massachusetts Board of Regents and the Massachusetts Community Colleges in implementing the student followup component of the Vocational Education Data System (VEDS). The Board of Regents took the lead in coordinating the VEDS followup study among the 15 state-supported community colleges. A key feature of the followup study planning sessions was discussion about collecting useful information beyond the minimum required for the VEDS report. An open-book database approach was adopted instead of minimal compliance with federal regulations. An operational analysis of the outcomes from the process included the organizational planning and structure that evolved from the groundwork for this project, the project products such as applications software, and operational difficulties encountered in implementing the project (content validity, confidentiality, and access). Data analyses were conducted at several different levels to produce reports for the federal government, state educational agencies, and the community colleges. (Selected aspects of these analyses are summarized.) (YLB)

Identifiers—*Highway Maintenance

This curriculum guide provides instructional materials to assist in training equipment operators in the safe and effective use of highway maintenance equipment. It includes 18 units of instruction covering the large equipment used in maintenance operations. Each unit of instruction consists of eight basic components: performance objectives, teacher activities, information sheets (content essential for meeting the cognitive objectives), assignment sheets (applications of knowledge that are prerequisites to skill development), job sheets (procedures to complete a manipulative or psychomotor skill), transparency masters, tests, and test and assignment sheet answers. Eighteen pieces of equipment are included: motor graders, asphalt distributor, rollers, dozer, backhoe, cranes and attachments, cherry picker (aerial bucket truck), spreader (self-propelled), mud jack, asphalt laydown machine, asphalt recycling machines, bridge snapper, snow blower, stripping and painting equipment, pugmill, vacuum sweepers, crack-sealing equipment, and rigging. For each piece of equipment, this manual covers uses in highway maintenance, controls, attachments, procedures for effective operation, inspection and service, basic operating procedures, typical maintenance operations, and safety procedures. The materials are suitable for students who are new employees, seasoned operators upgrading skills, or skilled operators reviewing procedures and using these materials for reference. (YLB)

Identifiers—*Industrial Electricity

This curriculum guide provides competency-based instructional materials for training in the field of industrial electricity. Materials are not geared to a specific grade level and may be used with secondary and postsecondary students as well as part- and full-time adult students. The guide includes three sections and ten instructional units. Each unit of instruction consists of eight basic components: performance objectives, teacher activities, information sheets (content essential for meeting the cognitive objectives), assignment sheets (applications of knowledge that are prerequisites to skill development), job sheets (procedures to complete a manipulative or psychomotor skill), transparency masters, tests, and test and assignment sheet answers. Section A on DC motor systems contains two units: DC Motors and DC Motor Controls. In section B on AC motor systems are seven units: Introduction to AC Motors, Shaded Pole Motors, Split Phase Motors, Capacitor Motors, Three Phase Motors, Contactors and Motor Starters, and AC Motor Controls. Section C on motor generators consists of one unit, Motor Generators. (YLB)

A joint collaborative effort between Greystone Park Psychiatric Hospital and the Parsippany Adult School had as its objective the facilitation of the deinstitutionalization and the assumption of the normal societal role of workers for emotionally disabled citizens. This was to be accomplished through the development, delivery, and refinement of a consumer and homemaking daily living skills educational model. Specific project objectives included the provision of instruction in these educational modules: basic housekeeping, use of transportation, money management, wise consumer shopping, nutrition and meal preparation, use of community leisure and social service resources, and orientation to the world of work. Parsippany Adult School provided daily instruction to 23 Greystone residents and their eight accompanying staff. Staff were thus provided with a new role as a teacher. Instructional sites were within a transitional unit at the hospital. Community-based experiences were an integral part of the project. Residents showed improvement in most areas of instruction. Staff participants developed and implemented numerous individual instructional lessons on their own for residents and offered assistance in daily lessons and learning activities. Appendixes include an assessment instrument, data, a project brochure, and bibliographies for each instructional area. (YLB)

Identifiers—310 Project, *General Educational Development Tests

This report provides research on the ramifications of implementing computer-assisted instruction (CAI) within the established framework for conducting adult basic education. The first part is narrative beginning with an historical overview of CAI. Topics include the availability of computer hardware in public schools, teacher preparation for CAI, and the role of computers in educational settings. CAI is defined, and theoretical and research support for CAI is presented. The project setting and anticipated consequences are then described. The courseware selected is listed, and learner and instructor responses to the types of courseware available are reported. Other sections discuss nontraditional and traditional instructional strategies using CAI, integration of CAI, attitudes of stu-

dents and instructors toward CAI, and outcomes. The second part of the report is a compilation of courseware that may be appropriate for GED preparation. They are arranged by these subject areas: writing skills, social studies, science, reading skills, and mathematics/basic skills. Each description provides a title, an annotation, a computer model, and costs. Courseware choices for a limited budget are arranged by computer model. A list of courseware descriptions for adult basic education programming is also included. (YLB)

A three-year study examined the significant factors that affect the job placement rates of students completing a Home Economics Related Occupations (HERO) program. Other purposes of the study were to develop and pilot test a model that could be used to determine factors related to student placement in a variety of vocational education programs and to provide a thorough description of the HERO programs under study. To obtain data for the first year of the study, researchers visited 30 HERO programs at nine different sites throughout Michigan. The focus of the study was on HERO programs in either home furnishings, equipment and services, or

institutional home management and supporting services. A mail survey instrument was also developed and sent to all other sites in Michigan that offered HERO programs in either of these two subject areas. Based on data from both the site visits and the mail questionnaires, it was determined that these sites with high placement rates generally had one-year programs that made extensive use of job shadowing and provided vocational interest screening for interested students. The most successful programs also appeared to place a high degree of emphasis on providing career opportunity awareness resources and training for guidance counselors. (Appended to this report are the survey instruments and discussions of the study findings.) (MN)

Identifiers—Food Production, *Home Economics Related Occupations, Michigan

A three-year study examined the significant factors that affect the job placement rates of students completing a Home Economics Related Occupations (HERO) program. Other purposes of the study were to develop and pilot test a model that could be used to determine factors related to student placement in a variety of vocational education programs and to provide a thorough description of the HERO programs under study. During the second year of the study, researchers visited 145 program sites throughout Michigan that had HERO programs in child care; food management, production, and services; and clothing management, production, and services. Data from each of the site visits were organized first into individual case studies and were then analyzed collectively to ascertain factors associated with student job placement rates. While many of the findings were specific to only one of these programs, four findings applied across all three programs. First, program assessment procedures should be used for program evaluation and should be enacted at least once each year. In addition, multiple resources should be used in curriculum development, and promotional activities should be targeted to guidance counselors. Finally, student follow-up should be used for program modification. (A list of programmatic recommendations are appended.) (MN)

Descriptors—Business Administration, *Business Education, Curriculum Development, *Educational Policy, *Educational Research, *Entrepreneurship, Federal Government, Literature Reviews, Policy Formation, Research Needs, *Small Businesses, State Government

The topical papers on entrepreneurial education presented at the Conference on Research and Education in Entrepreneurship at Baylor University in March 1980 were analyzed and policy options were developed. A review of the conference materials concentrated on identifying the key questions to be answered when establishing entrepreneurship policy and identifying implementation priorities. The key policy questions asked were concerned with the effect of governmental policies and actions on stimulating entrepreneurship, the levels and sectors of education that should receive government emphasis, development of educational materials and approaches that address the affective rather than the cognitive, and areas of research, including development of a database, entrepreneurial educational research, and research on entrepreneurship and small business. Criteria were then determined to include or exclude specific policy options. The following policy options for university activities were suggested: providing research support; providing fellowships for doctoral and postdoctoral students; providing systematic support for professional society activities, journals, and special awards for entrepreneurial research; developing a research and education clearinghouse; increasing small business consulting; creating visiting consultancies; and providing improved continuing education. Policy options for secondary and career education included developing concepts of entrepreneurship role models, extracurricular activity, curriculum, and a national project. (YLB)

Identifiers—New Jersey

A project was undertaken to create a program of training to prepare physically handicapped but mentally alert clients of United Cerebral Palsy of Monmouth and Ocean Counties, Inc. in New Jersey for employment in various child care situations. Training was provided at the adult program site, Camp Oakhurst. During the project, 10 clients of the adult program provided supervised child care for up to five active young children who belonged to members of the camp staff. The participating clients were fully involved in every phase of the planning, implementation, and evaluation of the project. The program provided practical supervised educational opportunities that enabled the 10 clients to gain child care experience, skill, confidence, and credibility. Based on the evaluations of the project made by those implementing and those participating in it, recommendations were made calling for the adaptation of a similar project by other agencies, schools, and industries. (Appended to this report are an evaluation form, an application for children, and a handbook.) (MN)

Identifiers—New Jersey, *Vocational Counseling Project NJ

The Vocational Counseling Project was undertaken to provide secondary-level handicapped students, who were identified as possible dropouts, with vocational counseling and support to facilitate post-high school adjustment. In addition, project staff were supposed to determine the readiness of secondary-level handicapped students for work placement, to serve as liaison between special education teachers and the district vocational placement counselor, and to serve as liaison to county social service agencies. During the project, members of the project staff conducted screening interviews to select students, provided individual counseling and assessment services, implemented student employment and parent workshops, worked to enhance staff interaction, developed a career library, and held a vocational and career fair. In all, services were provided for 92 students in five classrooms. Based on exit interviews with the students participating in the project, on attendance and tardiness data from the five participating in the project, and on attendance and tardiness data from the five participating classrooms, it was concluded that student attendance improved significantly after participation in the counseling project. Data from worksite supervisor and classroom teacher ratings, however, failed to indicate any significant improvement in student attitudes and behaviors after participation in the vocational counseling program. (This report includes a series of tables and charts summarizing data on student performance before and after participation in the project.) (MN)

Identifiers—*Career Exploration Program, New Jersey

The Career Exploration Program was conceived to provide needed vocational guidance and counseling for adults enrolled in adult high school, basic skills, and general educational development (GED) preparation programs. The primary focus of the project was on meeting the interlocking educational and employment needs of urban adults by increasing their vocational awareness, knowledge of available jobs, and the training routes to them and also by helping them develop effective job-seeking, retention, problem-solving, and communication skills. These objectives were implemented in a three-part program that involved a series of individual and small group activities to increase vocational and career awareness, as well as assessment procedures to identify and delineate the skills required to reach clients' specific goals. The plan was then to incorporate these skills into an individualized basic skills instructional program and to conduct workshops and discussion sessions designed to assist students in obtaining and retaining jobs. During the six months of its operation, the Career Exploration Program provided a flexible opportunity that gave students a variety of opportunities to enhance their career awareness, basic skills, and self-esteem. (Included along with this report are the COPS Interest Inventory, a self-assessment questionnaire, a program outline, a list of program behavioral objectives, and publicity materials.) (MN)

Descriptors—*Black Students, *Career Choice, Career Development, *Career Education, Economically Disadvantaged, Goal Orientation, Inner City, Junior High Schools, Junior High School Students, Role Models, *School Choice, Self Concept, Sex Fairness, Student Evaluation, *Vocational Interests, *Vocational Maturity

A program in career linkages was conducted at Project Link Educational Center to bring the students to greater self-awareness in terms of their personal qualities, abilities, interests, and determinations and to express and examine these in relation to their occupational interests and goals. (Project Link Educational Center is a tuition-free, nonsectarian, nonpublic junior high school serving 100 inner-city black youth of Newark.) Program procedures included individual interviews with students, secondary school placements, assessment of career maturity, administration of occupational checklists, interdisciplinary career week, career awareness field trips, role model experiences, slide/photo presentations, postassessment of career maturity, disseminations, and community career representatives follow-up. Parents, teachers, and professionals in career areas demonstrated strong cooperation in the school's efforts to provide career education. Based on results of an occupational checklist, renewed efforts to eliminate sex bias and sex role stereotyping were required. The Career Maturity Inventory results showed that the major problem is an attitudinal one based on indecision. Students eagerly anticipated and valued the role model experiences. (YLB)

Descriptors—Feasibility Studies, Individualized Instruction, *Job Skills, Motor Development, Perceptual Development, *Perceptual Motor Learning, Remedial Instruction, *Severe Mental Retardation, *Special Education, Task Analysis, *Teaching Methods, *Vocational Education
Identifiers—Bennett Hand Tool Test, Stromberg Dexterity Test, VIEWS Faucet Assembly, VIEWS Screen Assembly

A study tested the feasibility of a task-analytical instructional approach to developing vocational skills for severely and profoundly retarded individuals. During the study, each of 43 severely and profoundly retarded individuals received twelve 15-minute individual training sessions on each of four selected vocational tasks (the Stromberg Dexterity Test, the Bennett Hand Tool Test, the VIEWS Screen Assembly, and the VIEWS Faucet Assembly). During each training session, subjects were guided through a series of analytically task-defined steps necessary for the successful completion of the task, and the trainer recorded the type of prompt that was required to gain successful performance. Analysis of the degree of independence achieved for the completed steps in each training task provided clear and consistent evidence of the effectiveness of the training. Pretest and posttest analyses also indicated improvements in overall fine motor skills as a result of training. The results of the study were interpreted as providing clear evidence of the utility of systematic training for remediated perceptual and motor deficits in severely and profoundly retarded adults. Identifiers—New Jersey, Public Law 94 142

Compiled for beginning teachers who have not had much experience working with special learners, this handbook provides brief descriptions of the different categories of special learners in vocational education. Information is arranged in abstract form and presents a summary of the characteristics of these learners, how to recognize them in the classroom, appropriate curriculum considerations, proper placement, teaching strategies that are effective with these learners, and special physical facilities that may be needed. Two types of learners are profiled: special learners (disadvantaged, English as a Second Language, gifted and talented, incarcerated, and migrant), and handicapped learners (chronically ill, communication handicapped, emotionally disturbed, hearing impaired, learning disabled, mentally retarded, multiply handicapped, orthopedically handicapped, socially maladjusted, and visually impaired). The handbook also includes information on forming a child study team, as mandated by Public Law 94-142, and Individualized Education Plans. The final section of the guide describes five special programs of vocational education for special learners in New Jersey. (KC)

Identifiers—New Jersey (Morris County)

The Skills, Attitudes, and Values for Employment (SAVE) project was designed to explore the needs of women in the workplace. An exploratory design was selected for the study with a target population consisting of 200 women working in companies in Morris County, New Jersey. From a self-administered questionnaire used to elicit information, the study showed that more women in the 40 and under group are college graduates than in the group over 41. Also, more women who have attained a college degree or higher have had a mentor. The skills that seemed to be more important for the women studied were the self-management skills (self-assertion and public speaking) and functional skills (mathematics, statistics, English, computer-related skills, and career planning). The women also expressed the following needs: establishment of day care facilities, flexible work schedules, job sharing, financial planning, and exercise classes. Of the women in this study, 56 percent had a continuous work-career pattern. The majority of the women in this study perceived a positive correlation between participation in training and its helpfulness for getting a job, being promoted, and working efficiently. (Author/KC)

Identifiers—*Bergen County Vocational Technical Schools NJ

This project was conducted by the Bergen County Vocational-Technical Schools (1) to develop a practical awareness of energy conservation and management techniques for both commercial and domestic applications; (2) to develop four training courses to teach solar troubleshooting and maintenance, commercial energy management control, domestic energy management, and photovoltaics and wind power; and (3) to purchase and install energy management control and solar equipment to teach both conservation and solar energy applications. In consultation with advisory councils, professionals in the field of energy management and solar energy, and instructors of various technical disciplines, the preliminary plans for four trade extension courses were developed by the project coordinator, a field specialist in the heating, ventilating, and air conditioning trade with expertise in solar and renewable energy sources. The project coordinator finalized curricula for the four courses and analyzed proposed equipment purchases from technical viewpoints. The following four courses were developed: Energy Management Controls, Energy Conservation for Residential Dwellings, Solar Troubleshooting and Maintenance, and Photovoltaics and Windpower Systems. This course is one of four in a solar systems and energy management program developed by the Bergen County Vocational-Technical Schools to help tradespeople (heating, ventilation, and air conditioning mechanics; plumbers; and electricians) to develop an awareness of alternate energy sources and to gain skills in the areas of solar installations and energy evaluation and management. The format of the course is a combination of lectures, visual presentations, and shop sessions. Upon completion of the course, students will be expected to understand the operating principles of photovoltaic and windpower systems, to select a system that is compatible with the proposed energy application, and to perform basic installation and repair procedures for common types of systems. Following introductory materials that explain the purpose and conduct of the course, the course syllabus contains nine units. Each unit consists of an outline, objectives, note to the instructor, and/or shop session notes. The units cover the following topics: introduction and orientation, applied principles of basic electricity, history of windmills, types of windmills, electric storage, wind towers, elements of a feasibility study, introduction to photovoltaics, and photovoltaic system components and assembly. The competencies to be acquired by students are listed at the end of the syllabus. (KC)

Identifiers—*Community Based Education, *Educational Career Serv Community Outreach Prog, Special Needs Students

The Educational and Career Service Community Outreach Program was designed to assist special needs adults in overcoming obstacles preventing them from realizing the educational and vocational options available to them in their community. The focus of the project was on the development of community-based career awareness programs and the provision of follow-up individual counseling services throughout the rural counties of Gloucester and Cumberland in New Jersey. With the cooperation of adult community education schools, local libraries, and other community groups, the project maintained 10 outreach sites and served over 135 individuals. During the program, the project staff provided self-assessment experiences designed to help participants set and meet educational and career goals and conducted a brokering effort to distribute resources to appropriate community agencies, persons, and institutions. The program, having completed its second year, continues to be successful in serving individuals who, due to geographic isolation and dispositional barriers, are unable to make full use of traditionally placed services. The project has resulted in the establishment and maintenance of a cost effective, replicable career counseling outreach model. (MN)

Identifiers—Study of Work Project

The Study of Work Project implemented an experience-based prevocational career education program with 785 students from Eastside High School in Paterson, New Jersey. The emphasis of this approach was on developing connections between skill acquisitions in the classroom and skill application in occupational settings. The grant funded a community resource person who trained 33 teachers (1) to infuse work as a topic of study into course content; (2) to develop and implement classroom-based experiential learning activities, and (3) to implement community-based experiential learning about work roles. Evaluation results support the successful im-

plementation of project objectives. Project ideas were to be continued and expanded to all teachers at Eastside High School during the 1983-84 school year. (Author/KC)

Identifiers—Study of Work Project

This handbook provides suggestions for learning activities that teachers can use in providing an experience-based prevocational career education program such as the Study of Work Project that was conducted at Eastside High School in Paterson, New Jersey. The emphasis of the handbook is on developing connections between skill acquisition in the classroom and skill application in occupational settings. The guide is organized into four sections. The first section covers infusion of the study of work into regular classroom courses in subjects such as English, mathematics, and science. In the second section, ideas are provided for conducting classroom-based experiential learning about work roles. Some of the activities include the use of community resource people in making classroom presentations, peer teaching about personal work roles, career decision-making units, and team learning projects. The third section contains learning activities for a community-based approach to learning about work roles. Included are activities such as group visits to local work sites, small group learning projects in the community, and half-day shadowing experiences. The final section of the handbook contains information about setting up various types of internships for students. (KC)

Identifiers—Ocean Township School District NJ

This project, conducted in Ocean Township, New Jersey, was developed to promote career awareness for limited-English proficient (LEP) students. The project was designed to make LEP students in grades K-12 aware of the myriad of career possibilities that exist in the United States and of the possibility for persons of both sexes and various racial and cultural backgrounds to fill these jobs. Materials chosen for the program were nonsexist and multicultural. Meetings were held with parents, members of the community, and other educators to discuss the needs of students and the human resources that would be available to aid in the implementation of the program. Two types of pretests were administered. One test depicted 36 workers to be identified according to profession. The second test, based on the New Jersey Occupational Checklist, entailed having students indicate whether only a woman,

only a man, or both could do the jobs specified. When the pretests were used as posttests, the gains were significant. Using filmstrips, cassettes, games, puzzles, workbooks, texts, puppets, and dittos, the students learned that many job opportunities exist and that interests and personal characteristics are as important as intelligence and educational background when considering personal goals. Field trips and guest speakers of various ethnic heritages and, at times, nontraditional sex roles aided in expanding horizons and in bringing the world-of-work closer to the students. (Author/KC)

Descriptors—*Competency Based Education, Curriculum Development, *Individualized Instruction, Instructional Materials, *Learning Modules, *Material Development, Nurses, *Nursing Education, Postsecondary Education, Practical Nursing, Programmed Instructional Materials, Two Year Colleges, Vocational Education

Identifiers—*Bergen Community College NJ

The Associate Degree Nursing Program at Bergen Community College developed and field tested competency-based instructional modules in a program designed to allow licensed practical nurses to qualify to take the certification examination for registered nurses after a year of study. Thirteen licensed practical nurses were enrolled in the first class and were all to complete the program in August 1983. Because of the varied educational and experiential backgrounds of the students, competency-based education was used for instruction in the five nursing courses required for the program. The curriculum was modularized; learning was individualized and self-paced; plus, the teaching role was that of providing guidance and facilitating the learning process. Students progressed in sequence through the modules for each course as soon as they demonstrated competency in the knowledge and skills required in a given module. Prior to admission of the first class of students, eight in-house modules had been completed for the first two nursing courses required in the fall semester. Published modules were used for the 10 remaining sections of these courses. During the year, in-house modules were developed for the nursing courses required in the Spring and Summer semesters. A total of 34 in-house modules were developed and field tested with the first class of students. Students and teachers evaluated each module, and these evaluations are being used in ongoing revision of all modules. (Author/KC)

Descriptors—Adult Vocational Education, Employment Projections, *Information Sources, *Information Utilization, *Job Training, Labor Force, Labor Market, *Labor Needs, Labor Supply, Needs Assessment, *Occupational Information, Planning, Program Design, *Program Development, Vocational Education

This guide provides planners with the essential tools and methods of labor market analysis for planning local occupational programs. An introduction discusses responsibility for development of labor market information (LMI) and guide development. Chapter 1 is a brief checklist of the steps involved in developing and using LMI in program planning. It also serves as a "road map" for chapters 2 through 5, which include more detailed descriptions of the

process. Chapter 2 deals with creating a planning list of occupational titles from initial program ideas. The first two sections describe methods for obtaining ideas for new programs. Section 3 concerns translating the list into occupational titles. The first section of chapter 3 describes methods to refine the planning list to those occupations that warrant labor assessment. Section 2 discusses grouping occupations into potential programs. Chapter 4 describes the resources and methods necessary to assess the labor market potential of the occupational groupings. Three sections cover reviewing published LMI, gathering additional information, and reviewing findings with employer advisory committees. Chapter 5 briefly addresses program design. Appendixes include a glossary, bibliography, publication sources, resource organizations, and a list of supplements to facilitate use of this guide. (YLB)

Descriptors—*Agency Cooperation, Career Education, Cooperative Programs, Coordination, Delivery Systems, Demonstration Programs, *Disabilities, *Employment Potential, High Schools, High School Students, *Job Training, Models, Program Effectiveness, Program Evaluation, Secondary Education, *Special Education, State Programs, Vocational Education, *Work Experience Programs

Identifiers—*Project Workability

The integrated service delivery system for Project Workability was evaluated to determine its effectiveness in meeting high school special education students' employment and training needs. Interviews were conducted with site managers and staff, students, teachers, field office staff, employers, and parents at six sites. Information on all 34 sites was also considered. The site programs were found to operate in conformity with the state model, although there were some differences in operations among sites. Activities included identification of students for project participation, assessment, employment preparation training, work experience, and supportive services. The State Department of Education's Office of Special Education was responsible for overall project management, and the Office of Employment and Training assisted the project staff. Operational problems included unfamiliarity with the Department of Rehabilitation's eligibility criteria, lack of resources, and lack of attention to funding expenditures. Conclusions were that the project's integrated delivery system can increase the employability of high school special education students; the extensive coordination at the state and local level was a key factor in meeting objectives; and assessment and work experience contributed the most toward increasing students' employability. (A description of the project is attached.) (YLB)

EDRS Price - MF01/PC09 Plus Postage.

Descriptors—*Adults, Career Education, College Graduates, Employment, Factor Analysis, High School Graduates, Labor Market, *Males, Middle Aged Adults, *Profiles, *Salaries, *Salary Wage Differentials, *Wages

Identifiers—Baby Boom, *Cohort Size

This paper succinctly characterizes the profiles for time shifts in earnings and then focuses on the underlying determinants of the changes, in particular on the effect of cohort size. The data, drawn from the March version of the Current Population Survey from 1968 to 1982, are described. The sample is limited to white men over the age of 14, and four educational categories are included: 8-11 years,

high school graduates, 13-15 years, and college graduates. Following a presentation of the statistical methodology, the results of an interpretation of that method in an economic setting are described. Ten tables and nine figures illustrate results of the factor analyses that decomposed the earning profiles into time-specific and factor-specific effects. Variance profiles, factor profiles, elasticity of wages, and simulated wage profiles are provided. Appendixes, amounting to approximately three-fourths of the document, include a detailed analysis of the effects of cohort size (further results of the investigation reported in the main text), results concerning the determinants of college enrollments, and computation of wage elasticities. Descriptors—Annotated Bibliographies, Consumer Economics, Curriculum Evaluation, Curriculum Guides, *Economics, *Fused Curriculum, Guides, *Material Development, Program Evaluation, Resource Materials, Secondary Education, Student Organizations, *Student Participation, *Vocational Education

This report presents the scope of work for the first year of a study to identify and facilitate economic literacy skill instruction of vocational education students. The six chapters cover the six major objectives. Chapter 1 reviews the project's products and related activities. The processes used to formulate an operational definition for economic literacy are described in chapter 2. Two drafts and the final definition are provided. The third chapter describes the assessment of selected instructional programs in five pilot schools to determine the status of economic literacy instruction within the selected program offerings. The instrument used to rate curriculum materials and findings of the review are presented. Chapters 4 and 5 discuss the development of the project's two products: a suggested instructional content guide and an annotated bibliographic resource guide for vocational education programs. Data from a survey to determine content and a description of the content of the resource guide are provided. The final chapter discusses project efforts to promote economic literacy through vocational student organizations. (YLB)

A model for on-bus instruction during travel time from high schools to area vocational centers was developed, tested, revised, implemented, and evaluated. Two units of study adapted from existing material used for teaching occupational survival skills were included in the model. Audiocassettes, handouts, worksheets, attitudes, and cognitive tests were used during the project. Students who were instructed on the bus became more positive in their attitudes toward riding the school bus. Teachers reported little or no change in students' concerns about employability or job survival skills. Following the

13-page abstract are extensive appendixes. Two project progress reports describe the developing and piloting of units for study on the bus in phase 1 and developing of units, instruments, and procedures for phase 2. Four manuscripts submitted for publication describe the project that involved providing students with headsets and lapboards on the bus, wiring the bus with jacks to accommodate the headsets, distributing handouts and worksheets, depositing duplicate materials in the school library, and evaluating student attitudes. Other appendixes include a summation of evaluation data and letters of interest. (YLB)

Identifiers—Illinois, *Microcomputer Vocational Education Reporting Sys, Vocational Education Data System

This manual is designed for use with the Apple II microcomputer and software packages for the Microcomputer Vocational Education Reporting System 1.0 (MICRO-VERS). It is intended to aid local agencies in building and managing a database of information required by the State Board for reporting vocational program enrollment. An introduction describes the reimbursement claiming and reporting process. Part 2 contains a timetable depicting an anticipated sequence for compiling program and enrollment data and reporting them to the State Board. Part 3 is an introduction to the microcomputer. It covers MICRO-VERS 1.0 system hardware, general functions, disk handling, starting of the MICRO-VERS system, and initialization of a new disk. Parts 4 through 6 discuss the three types of necessary data—vocational program data, student data, and course enrollment data. Variable descriptions are provided, and data entry procedures for the various data are described. Part 7 explains entering program completion status data. Part 8 deals with displaying the Reimbursement Claims Report and Parts III, IV, and V of the Vocational Education Data System Report. Procedures for auditing vocational education enrollment and expenditures are explained in part 9. Appendixes include sample forms, a glossary, a list of resources, and supplemental listing programs. Identifiers—Illinois, *Microcomputer Vocational Education Reporting Sys, Vocational Education Data System

This manual is designed for use with the Apple II microcomputer and software packages for the Microcomputer Vocational Education Reporting System 2.0 MICRO-VERS. It is intended to aid local agencies in building and managing a database of information required by the State Board for reporting vocational program enrollment. An introductory section, intended for agencies new to the system, briefly describes MICRO-VERS and makes suggestions regarding time schedules. Part 2 on system requirements is a description of the hardware required to operate the microcomputer under MICRO-VERS 2.0 and the major updates made from

version 1.0. Some suggested sources for course and student data are presented. Part 3, the Operator's Handbook, describes each of the major steps in creating and editing the MICRO-VERS files and printing the required reports. It covers getting started; preparing data disks; entering/editing course, student, and class enrollment information; determining program completions; verifying data on file; and compiling and printing the report. Designed for new users, part 4 is a 57-page MICRO-VERS tutorial. Appendixes include sample forms, a glossary, and a list of resources. (YLB)

Identifiers—*California, Employer Surveys

A study examined the views of a sample of Los Angeles area employers concerning the utility of vocational education. During the study, researchers surveyed a group of employers from a predominantly nonwhite, relatively poor section of downtown Los Angeles and a group of employers from the fast-growing, affluent, predominantly white, planned industrial suburb of Torrance. The responses of the members of the two groups did not differ significantly from one another. As far as these employers were concerned, good working habits and positive attitudes are the most crucial elements to an employee's success on the job. Contrary to popular belief, the employers felt that recent technological changes have had little impact on the skills required to perform most entry-level jobs. The survey results suggest that, contrary to the claims of its advocates, vocational education confers few special advantages on applicants for entry-level jobs, with only one in five employees paying higher salaries to entry-level workers with vocational as opposed to academic backgrounds. Based on these findings, study recommendations called for reforming secondary vocational education, coordinating vocational programs with employer-based skill training, and paying more attention to the needs of small firms for specialized skill training. Identifiers—*National Center for Research Vocational Education, Special Needs Students

For the past decade, the National Center for Research in Vocational Education (NCRVE) has acted as a catalyst in the nationwide movement toward performance-based teacher education (PBTE). In the 1960s, an occupational analysis performed by NCRVE using introspection and interviewing techniques resulted in a comprehensive list of 384 per-

formance elements organized into 10 functional categories. These teacher competencies resulted in a series of 100 modules known as the PBTE modules. Later, a project conducted in 1981 formulated a list of 380 competency statements that were eventually used to develop 13 new PBTE modules for serving the students with special needs. Other NCRVE activities in the field of competency-based education (CBE) have included the development of modules to assist students in improving their basic skills and revision of the original 100 PBTE modules. One of the most recent NCRVE activities in the area of PBTE was a status study of the problem of the technological update of teachers. The study involved a determination of the nature and extent of the need for the technological updating of teachers at the secondary and postsecondary levels as well as an identification of the technologies in which the problem is most critical. The study resulted in the development of a series of strategies and recommendations for use in teacher updating programs. (MN)

Identifiers—*Intergenerational Programs, University of Wisconsin Green Bay

A pilot study at the University of Wisconsin (UW) Green Bay campus examined the attitudes of college faculty toward adult students in classes comprised of both adult and traditional-aged students. During the study, researchers interviewed 10 teachers of intergenerational classes at the Green Bay Campus of the University of Wisconsin and administered surveys to 259 students participating in these classes. Based on data from these two sources, it appeared that both the younger and older students and their professors have overwhelmingly positive attitudes concerning a mix of ages in the college

classroom. When asked about the effect of adult participation in college classes, teachers commented that adult students often contributed to lively and sophisticated discussions, provided an added personal dimension based on real-life experiences, and possessed a high motivation and commitment that, in fact, set high standards for all. On the negative side, the teachers felt that the adults' verbal ability and experience may intimidate some younger students at times and that, occasionally, some adults tend to bring irrelevant experiences into discussions. The students surveyed did not find these statements to be true, however. As a pilot study, this research effort indicated that a similar, larger study should be quite successful. (MN)

Identifiers—*Atlanta Partnership of Business and Education Inc, Georgia (Atlanta), Private Sector
The Technology Program for the Atlanta Partnership of Business and Education, Inc. is designed to enhance the economic development of Atlanta through the collaborative efforts of private business, public schools, and higher education. In an effort to incorporate these communities into a single organization, the technology program has established a network linking the following organizations and sectors: the Atlanta Public Schools Technology Quadrangle, private business, higher education, the Georgia Research Consortium, the Atlanta Public Schools Information Technology Commission, and funders. The first of these organizations, the Atlanta Public Schools Technology Quadrangle, consists of four magnet schools directly related to technology that offer preparation for college, postsecondary training, or immediate job entry. Originally conceived in an effort to make Georgia competitive with other states in terms of attracting high technology companies, the Georgia Research Consortium (GRC) is currently utilizing the pooled resources of three postsecondary Georgia educational institutions to identify high technology growth opportunities and to provide the financial support needed to establish centers of excellence in the research universities of Georgia. The role of the Atlanta Public Schools Information Technology Commission in the network is to develop and implement a plan for expanding the use of microcomputers throughout the Atlanta school system. Factors Responsible for Career Choice among Sampled Nigerian Teenagers in Bendel State of Nigeria.

Pub Date—[83]

Note—30p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Career Choice, *Career Education, *Decision Making, *Educational Research, *Foreign Countries, *Influences, *Occupational Aspiration, *Secondary Education, *Vocational Aptitude, *Vocational Interests

Identifiers—*Nigeria (Bendel State)

Male and female students in four urban locations of Bendel State of Nigeria were administered a questionnaire on choice of careers. The sample consisted of 640 students, 160 in each location ranging in age from 14 to 17. It was hypothesized that factors influencing career choice were money-yielding prospects, desire to work in state of origin, parental influences, prestige attached to jobs, personal interests, knowledge of various careers, subjects offered in schools, amount of leisure time, outdoor activities, and working with other people as part of the job. A review of the literature included research by Nigerian counselors on job aspirations and career choice among Nigerians. Findings indicated that

these factors influenced career choice: money-yielding prospects, parental influences, prestige attached to job, knowledge of various careers, subjects offered, and opportunities to work with other people. The majority of students indicated career choice was influenced by academic ability. Other findings were that the mass media in the country do not provide information about careers and career choices, that the students were aware of the influence of personal characteristics on career choice, and that the students preferred indoor work. This course, adapted from military curriculum materials for use in technical and vocational education, is of interest to food service personnel and to some food service supply personnel. Designed for independent study, the course includes the principles of nutrition, including nutrients and the effects of digestive processes on each individual's caloric and nutritive requirements. It gives the basic food groups, explains the composition of foods, and specifies the importance of each in menu planning. It outlines nutritional standards, adult energy requirements, and methods of nutritional evaluation and analysis. The 16 food groups used in menu construction for item substitution are described, with emphasis on the importance of planning for acceptability. The course consists of a lesson assignment, contents pages, lesson text, self-grading lesson exercises, and a student inquiry sheet. A final examination, to be sent to the student's school for grading, completes the course. A glossary of nutrition and menu planning terms is appended. (KC)

Identifiers—Military Curriculum Project

This course, adapted from military curriculum materials for use in vocational and technical education, provides training in the theory and practice of sheet metal work. Designed for student self-instruction (such as a correspondence course), the text consists of four volumes. Volume 1 discusses shop mathematics, measurement and layout tools, working drawings, sheet metal layout, and sheet metals. Volume 2 covers fastening hardware and devices for sheet metal; sheet metal drilling and punching equipment; folding, forming, and seaming equipment; and soldering, spot welding, and sealants. In volume 3, instructions are given for assembling sheet metal components and making joint connections to fasten the components together. It also covers fabricating, installing, and repairing sheet metal components of heating and ventilating systems, fixed utility equipment, roofing, gutters, and downspouts. The final volume discusses supervisory responsibilities and personnel management, supervision of sheet metal fabrication and repair operations, determining job requirements, and inspec-

tions and evaluations. Each volume is accompanied by a student workbook containing a study reference guide, chapter objectives, chapter review exercises keyed to the text with answers, and volume review exercises keyed to the text. (KC)

Intended for teachers in office education programs and those working with coordinated vocational-academic education programs, this material provides information for adapting the regular classroom, equipment, and curriculum to meet the particular needs of students with special needs. An introduction briefly describes the three major laws influencing vocational education for handicapped persons. The next four chapters are devoted to ways for providing instruction to students with four types of handicapping conditions: hearing impaired, mentally retarded, physically impaired, and visually handicapped. Each chapter offers a definition of the handicapping condition, a discussion of student abilities and needs, and a collection of teaching techniques and strategies relating to adaptation of physical facilities, setting of goals, adaptation of the curriculum, specialized materials and equipment, teaching methods, and modification of testing and evaluation processes. An example of how a unit of instruction may be adapted for the special needs of the students is also included. (No example is provided for the physically handicapped.) Appendixes include a reading level formula; listings of resource materials, resource organizations, articles, and special equipment and tools with their purpose and source; and information on project IMPART. This guide provides information to enable coordinators to direct learning activities for students using an individualized study guide on operating a lathe. The study material is designed for students enrolled in cooperative part-time training and employed, or desiring to be employed, as lathe operators. Contents include a sample progress chart, suggested teaching procedures for the coordinators, answers to assignment sheets, answers to a unit test, a sheet with the study guide objective and specific objectives, 12 information sheets, 18 assignment sheets, and an eight-part unit test. The information sheets cover these topics: introduction to lathe operations, basic hand and power tools, headstock accessories, carriage accessories, tailstock accessories and other accessories, terms and definitions, basic lathe operations, things to consider when running speeds and feeds, knurling, tool post grinding, filing and polishing, and cleaning and lubricating the lathe. This teacher's guide provides instructional materials for students enrolled in office duplication practices (ODP) programs. It includes nine instructional units, eight of which center around occupations covering a variety of skills development. The ninth unit focuses on job success. Each unit of instruction consists of 10 basic components: overall objective, occupational information, an instructor's resource sheet (an outline of content), a list of additional resource material, information sheets (content essential for meeting the cognitive requirements), transparency masters, assignment sheets (application of knowledge), job sheets (procedures to give direction to the skill being taught), unit tests, and test and assignment sheet answers. The first eight units cover the following approved job titles as found in the Dictionary of Occupational Titles: ticket seller, copy cutter, general clerk, attendance clerk, stock clerk, appointment clerk, information clerk, and varitype operator. Unit 9 focuses on developing proper job attitudes and ethical conduct. Units are planned to cover more than one classroom period. (YLB)

Interviews were conducted with employers and military personnel to obtain information regarding basic skills needed in entry-level jobs available to young people with a high school education. Information was also obtained from young entry-level employees and military recruits on the quality of their high school preparation in basic employment skills and the types of activities that helped them in the school-to-work transition. Indepth interviews were conducted with 135 managers, owners, and supervisors and 130 entry-level employees. Employers ranked 80 tasks in reading, mathematics, computers, writing, communications, interpersonal, manual/perceptual, problem solving/reasoning, and job retention/career development in order of importance. Employees indicated the importance of various tasks in their present positions and rated their preparation in high school for the same tasks. Open-ended questions were asked about types of courses, extracurricular activities, and out-of-school experiences that helped them succeed in their present positions. Interviews were also conducted with 45 military and 8 civilian instructors and 57 young recruits. Following two sections presenting results of the survey is a third section that provides examples of some existing programs in Colorado designed to improve the career knowledge and employability skills of young people. Parental projections of service needs and their ranking of features they perceived as important in vocational and residential programs for their handicapped son/daughter were assessed through a written questionnaire. A total of 163 questionnaires were completed and returned by parents of high school students with moderate and severe handicaps. The questionnaire consisted of nine items that asked parents to provide demographic information, to rank features of vocational and day services most likely to influence selection of a program, to rank features of residential services most likely to influence program selection, and to rank generic adult service programs their children would need immediately upon graduation, five years after graduation, and ten years after graduation. Parents overwhelmingly ranked vocational/day programs as the top priority for their children upon graduation and for the next 10 years. Long-term structured employment models providing a wide range of work opportunities and contact with nonhandicapped peers were the preferred alternative. Residential programs were more important five to ten years after graduation. Case management services were seen as important at two points in a student's transition from school to adult services: prior to graduation and as parents grow older and less able to act as their children's overseer. Data also verified the inadequacy of information for parents about adult services. (YLB)

This module, one in a series of 127 performance-based teacher education learning packages, focuses on specific professional competencies of vocational teachers. The materials are designed for use by preservice and inservice teachers working individually or in groups under the direction and with the assistance of teacher educators. This module describes various kinds of instructional units and how they can be used to improve instruction in vocational programs. It also explains how to put these components all together to create a written unit plan. Teachers completing the module successfully should be competent in developing instructional units in their vocational service areas. The material in the module is organized into five learning experiences, each consisting of an enabling objective, activities with information sheets, and feedback. The final learning experience requires the students to develop a unit of instruction in an actual teaching situation and to have a resource person find his/her competency in developing the unit. Sample forms and case studies are given in the module. (KC)

Identifiers—United States

A pressing problem in the United States today is that of employment: how to create enough jobs and, especially, what impact high technology will have on present and future jobs as well as educational needs. Some policymakers see high technological industries as the basis for revitalizing the economy. The major challenge to education and training, according to this view, is to prepare adequate numbers of people with required high-level skills and to upgrade the present skill requirements of occupations. In this view, more, better, and more specialized education is needed. In contrast to these persons are those who predict that the effects of high technology on employment will be modest in both the number of jobs created and the skill level required, and that high technology will downgrade skill requirements of existing jobs as well as displace workers already in jobs. Furthermore, the labor force will not require expanded science and mathematics or computer literacy but will be employed in low-level service occupations. According to this view, the relatively small number of workers who will require higher-level skills will be able to obtain them through existing higher educational channels. In our view, what is needed is a comprehensive approach enabling persons to obtain the types of education and training that they need throughout their working lives. Such an approach, called recurrent education, would (1) respond to emerging educational needs, (2) cover a wide range of opportunities, and (3) by establishing a wide range of finance and information, allow persons to undertake a variety of educational and training experiences over a lifetime. Such a system should be a top priority for this country. (KC)

Identifiers—United States

Today, this country is facing awesome challenges. Technology is changing all aspects of life, while work force requirements shift rapidly, swelling the numbers of workers who need to be retrained. At the same time, information technologies are creating changes in the automated office. Higher-level literacy is required for most workers in this sector. As the economy moves from an industrial to an information base, the mass educational approach

designed to turn out productive workers for industry is no longer deemed appropriate. Rather, education for the future must be improved; not only must schools reemphasize the basics, they must expand the traditional curriculum to include communications, higher-level problem-solving skills, and scientific and technological literacy. Whereas only 7 percent of this country's new jobs will be in high-technology occupations, programs to train workers for these jobs must be designed and implemented quickly if the United States is to compete in the international marketplace of the new global economy. Educators at all levels should cooperate to provide their students with higher levels of mathematics, language, science, and computer literacy skills, along with critical thinking and reasoning skills. (This paper provides information about and examples of the types of programs needed to prepare persons for the new technological jobs that are emerging.) (KC)

This monograph provides a vision of the future for vocational educators in a position to improve programs, such as teachers and administrators of local educational agencies and state leaders who set priorities in educational agencies. The monograph addresses nationwide technological concerns of the computer, image storage and creation, and communications. It promotes understanding of organizational factors and the learning processes needed to make good use of the computer hardware and software tools becoming available for educational programs. The paper is organized to provide ideas on developing skilled workers, selecting useful hardware and software, and interpreting trends in educational technology. Examples of technological application in industry are cited, and likely future trends are indicated. The monograph provides change-oriented educators with insights into future use of technology and promotes an increased awareness of future trends, uses of technology in education, and priority research and development needs. A glossary of computer terminology is provided. (KC)

This paper presents a historical overview of the field of bilingual education and vocational education. The extent of the need for bilingual vocational education is described along with the status of current programming. The description of the state of the art includes program design, assessment practices, instructional materials, personnel, and strategies in bilingual vocational instructor training. Exemplary bilingual vocational education programs are reviewed, including those on the federal, state, and local levels, and vocational English-as-a-second-language programs are described. Finally, recommendations are made relative to program development and expansion. Appendices to the paper list selected sources of bilingual and non-English vocational materials and selected resources in bilingual vocational training. (KC)

Identifiers—United States

American society is based on work. The industrial revolution exposed a growing proportion of the population to unemployment, underemployment, and dislocation. Early theoreticians believed that unemployment was a temporary labor market imbalance that would correct itself with downward wage adjustments. John Maynard Keynes, on the other hand, argued that unemployment is involuntary and results from government policies that can be changed. The Employment Act of 1946 legislated the nation's intent to achieve full employment, an ideal still held. However, the only way to achieve full employment is through increased spending that fuels inflation. To date, the principal strategy for fighting inflation has been economic restraint, which results in ever-higher levels of unemployment. The strategy proposed to correct the situation emphasizes policies that conform to the actual operation of the labor market, with a full range of anti-inflationary policies in place before attempts are made to reach the 8 percent unemployment barrier. Probably the best device above the 6 percent unemployment rate is a temporary marginal wage subsidy to create jobs. Below the 6 percent rate, strategies to improve productivity in the lower range of jobs are appropriate. To provide the training needed to increase productivity, American educational systems will have to do a better job of making sure youth acquire a high level of basic skills. However, overall economic expansion is a necessity if unemployment is to be reduced. (KC)

This paper, a resource for vocational and adult education teachers who teach entrepreneurship education, reviews selected literature on entrepreneurship published since 1970. It includes periodicals, monographs, books, and miscellaneous publications produced by the U.S. Small Business Administration and similar organizations. The literature reviewed is synthesized into guidelines for use by vocational educators responsible for teaching entrepreneurship skills. The paper organizes the synthesized literature into these five chapters: (1) characteristics of entrepreneurs, (2) industry selection factors, (3) getting started in an industry, (4) the entrepreneurial industry, and (5) learning how to be an industry entrepreneur. Each of the chapters begins with an introduction to the topic with some support from the literature. A list of suggested activities follows, and the chapter concludes with a brief summary. A bibliography of printed materials for and about entrepreneurs is included in the document. (KC)

A 12-month program provides adult Indochinese refugees with the basic communication skills and understanding of American culture needed to help them secure or upgrade employment. Offered through the community college system, the program is divided into four levels of instruction: non-literate, beginning, intermediate, and upper intermediate. The curriculum at each level consists of reading, grammar, tests, and an outside speaker program. Staff development includes preservice workshops and teacher observations. Special attention is also given to preparing staff for cultural differences in dealing with the Indochinese population. A list of special considerations describes the problems of pronunciation and the special needs of a non-literate student body. Appendices contain a course description, samples of tests, a discussion of cultural differences, songs for use in an English as a second language class, and an evaluation instrument. (LP)

Identifiers—PF Project

A series of 10 high-interest, low-vocabulary reading books for adult basic education students is presented. The series begins with very simple vocabulary and gets progressively more difficult from book to book. Each book contains from four to six stories which focus on the lives and relationships of a variety of humorous characters living in a fictitious town. Each story is preceded by a list of vocabulary to be introduced or reinforced in the story, and is followed by several questions for checking reading comprehension. The stories in book 10 include questions for checking understanding of vocabulary. Each book also contains an alphabetical list of the vocabulary presented in the book. (DC)

Identifiers—PF Project

The document provides a process model for a competency-based adult high school diploma program. Following an overview, the document is arranged into nine chapters. Chapter 1 focuses on starting such a program and gives suggestions for conducting needs assessment, setting up a planning group, implementing adult basic education awareness activities, and securing general community involvement. Chapter 2 provides a statement of philosophy, and chapter 3 considers the identification, rating, and organization of competencies. In chapter 4, a description is given of the characteristics, organization, content, strategies, and delivery of instruction. Chapter 5 provides a discussion of the purposes, characteristics, techniques, and administration of learner assessment. In chapter 6, suggestions are given for selecting, adapting, and developing competency-based education materials. While the focus of chapter 7 is on program evaluation, chapter 8 focuses on the evaluation of staff development. The final chapter presents additional questions and answers concerning competency-based education. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community. Identifiers—PF Project

A career planning folder helps secondary students recognize and make choices concerning their interests, skills, and goals. Students record their progress annually on a series of charts. In the eighth and ninth grades, students list their school and community activities, their interests and hobbies, jobs or careers they have researched and found interesting, and the abilities needed to fulfill these jobs. In the tenth and eleventh grades, students continue to record job and career clusters interesting to them, and match the skills needed for these jobs with skills

they possess or can acquire. In the twelfth grade, students describe their post-graduation plans. A tentative career planning chart is provided for students to enter their plans, problems, and discussions with parents. Additional charts record aptitude test and entrance exam grades, career counseling sessions, work experience, references, and academic record for grades 8 through 12. (LF)

Identifiers—PF Project

Designed to assist Frederick County (Maryland) high school students with career planning, this handbook provides information for exploring the question, "What to do after high school?" General information covers employment trends, average starting salaries, types of financial aid available, relevant Federal statutes regarding equal pay and discrimination in employment, and the Maryland Equal Pay Act. A career planning time line suggests steps to take during each high school year. Programs and resources available to the students are explained: the high school curriculum; the career center; vocational education; the vocational technical center; cooperative work study; continuing education; vocational placement; and volunteer programs. The following alternatives are also discussed: immediate employment (how to job search); the armed forces; trade, technical, and business schools; apprenticeships; and community college programs. Occupational and technical career programs available in Maryland community colleges are listed. A brief paragraph on the option of pursuing a college education concludes this handbook. (EM)

The displaced worker is an individual who has been laid off from a job and has little or no hope of returning to that particular position. The number of displaced workers is large and is apt to increase. Displaced workers are typically male, older, not highly educated, and are union members with several years of seniority and above-average wages. Long-term solutions to their needs are provided by economic development strategies involving the cooperation of government, business, and education. Short-term strategies such as Canada's Manpower Adjustment Committees are used to respond to the needs of employers and employees in specific situations. The most important goal of short-term programs may be to help displaced workers understand that there is a network of support services available. Responsibility should be shared by government,

employers, labor, education, and community agencies. This fact sheet includes lists of: (1) facts and figures on displaced workers; (2) individual needs; (3) long-term economic development strategies; (4) features of adjustment committees; (5) short-term program strategies; (6) ways in which agencies can share responsibility; and (7) two references upon which this fact sheet is based (see note). Identifiers—ERIC, Fact Sheets, PF Project

This fact sheet provides an overview of the potential effects of new communications technologies on education. The topics which are addressed include: (1) examples of communications technologies including television, teletext and videodata, Instructional Television Fixed Service and Multipoint Distribution Services, videodiscs, direct broadcast satellites, and personal computers; (2) influences these technologies will have on the workplace and on the demand for education; (3) ways that they will affect teaching methods and instructional delivery systems; and (4) potential effects they will have on the role of the educator. Four papers upon which this fact sheet is based (see note) are cited along with three additional resources, two of which are available from the Educational Resources Information Center (ERIC) system. Identifiers—ERIC, Fact Sheets, PF Project

Facts and figures related to the underemployment of college graduates are presented. Underemployment is defined as holding a job that requires less education than the employee has obtained. Topics which are discussed in this digest include: (1) the implications of underemployment for career development; (2) statistics on college enrollment and the proportion of college graduates in the labor force; (3) types of jobs held by college graduates; (4) the employment outlook for college graduates; (5) trends in family income since 1960; and (6) career education needs of the underemployed including exploration of a wider range of options, exploration of the relationship between work and other life roles, and career planning for multiworker families. This digest includes an eight-item summary of employment trends and an eight-item bibliography of references, two of which are available from the Educational Resources Information Center (ERIC) system. Descriptors—Computer, Managed Instruction, *Computer Oriented Programs, *Cooperative Education, Cooperative Programs, Coordination, Guidelines, *Microcomputers, *Program Administration, School Guidance, Secondary Education, *Vocational Education

Identifiers—PF Project

Ways in which microcomputers can be used in cooperative vocational education programs in secondary schools are presented. It is stated that the future of cooperative education depends on its ability to be accountable for the time that students spend outside of the classroom and that the microcomputer can be an effective tool in meeting this need. A variety of tasks that microcomputers can perform are listed for the following areas: (1) administration; (2) guidance; (3) management of records and inventories; (4) professional development; (5) instructional management; (6) assistance to vocational student organizations; (7) coordination; and (8) school-community relations. Examples of a training plan, a weekly coordinator's report, and a student wage-hour report generated on a microcomputer are appended. (DC)

Identifiers—Keyboarding, PF Project

This two-part document describes the development of a word processing instructional program at NEKA Vo-Tech School (Kansas) and offers recommendations for incorporating word processing into the curriculum. Program development steps which are discussed include: assessing community needs; developing implementation phases; contacting other instructors; researching facility needs; subscribing to journals; and researching funding sources. The list of criteria by which eleven brands of word processing equipment were compared includes: cost; service and repair; systems support; training; ease of operation; equipment standardization; buy versus lease; vendor reputation; storage capacity; printing speed; output or print quality; warranty; training manuals; and software and supplies. The following recommendations are offered: at an equipment demonstration, care should be taken to check out the equipment on tasks that it will be used for; when incorporating word processing into the postsecondary curriculum, the highest priorities are language arts and keyboarding skills; and speed should be measured by line count rather than words per minute. The following skills are described as being important: machine transcription; proofreading; grammar; use of reference sources; records management; basic mathematics; word processing terminology; and correction methods. A 30-item list of points to clarify during an equipment demonstration is included. (DC)

Descriptors—Age Differences, Age Groups, *Agency Cooperation, *Aging Education, Demonstration Programs, Elementary Secondary Education, *Older Adults, Program Descriptions, *Public Agencies, Regional Programs, Resources, *School Community Programs, Services, Shared Facilities, State Agencies, State Programs, State Surveys, Volunteers

Identifiers—Foster Grandparent Program, *Intergenerational Programs, PF Project, Retired Senior Volunteer Program, *Wisconsin

Existing intergenerational programs in Wisconsin schools are described in this booklet along with ideas and resources to encourage greater school and community involvement in such efforts. The booklet is divided into three major sections. The first section is a summary of the major facts on aging and a summary of information gathered from the 1981 intergenerational survey sent to all Wisconsin school districts. The second section describes eight exemplary programs in Wisconsin schools which incorporate concepts of aging into the curriculum, promote contact and understanding between the generations, and open up school facilities to serve the needs of older persons. The third section lists available resources which schools, agencies on aging, and communities could use in exploring and implementing programs. The two major resource networks described are the Wisconsin Aging Network, and the Public Schools and Selected Programs on Aging. The appendix contains references to numerous Wisconsin resources on aging and a 52-item bibliography of books, teaching materials, articles, films, and other media. (EM)

Descriptors—Academic Achievement, Adult Learning, *Age Differences, *Cognitive Style, Comparative Analysis, Higher Education, Middle Aged Adults, *Nontraditional Students, *Reentry Students, Student Educational Objectives, Student Participation, Young Adults

Identifiers—University of Akron OH

Colleges and universities are having to design instructional formats for both traditional and nontraditional, second career individuals. To compare the learning styles and other related educational factors (e.g., test preferences, educational goals) of traditional and nontraditional students at the University of Akron (Ohio), 154 traditional students, aged 18 to 25, and 84 nontraditional students, aged 30 and over, completed Kolb's Learning Style Inventory, a general questionnaire on behaviors required in higher education, and a demographic information sheet. An analysis of the results showed no significant interaction between the traditional and nontraditional groups and learning style, i.e., learning style was not dependent on age in predicting questionnaire responses. However, learning styles and questionnaire responses significantly discriminated between the two groups, in that nontraditional students displayed more determination and certainty, handled classroom assignments with ease, and responded more favorably to brainstorming sessions than did traditional students. (Numerous tables present the results.) (BL)

Descriptors—Attitude Change, *Attribution Theory, *Beliefs, College Students, *Evaluative Thinking, Higher Education, Perception, *Persistence, Schemata (Cognition), Social Theories

Identifiers—*Belief Perseverance, Social Judgment Theory

Individuals tend to hold on to initial impressions even after the data upon which they have formed the impression have been discredited. To partially replicate and extend a previous study (Ross et al., 1977) on belief perseverance, in which subjects were told they were to act as clinical psychologists attempting to understand and predict patients' behavior based on background information, college students attempted to make clinical judgments about possible patient behavior based on case history material. Two control groups, one without explanation (N=20) and one with explanation (N=20) were included. Subjects in the experimental conditions provided one explanation (N=20) or two explanations (N=38) about why the patient might or might not have committed suicide. All subjects rated the likelihood of five events (committed suicide, participated in a dangerous medical experiment, became an alcoholic, contributed money to the Peace Corps, volunteered on a political campaign) subsequently occurring in the patient's life. Analysis of the results provided clear support for the hypothesis that once having explained an event, subjects' subjective likelihood predictions for that event actually occurring increase. However, no increase was obtained among subjects in the dual explanation task. It is possible that subjects recognized the ambiguities in the data when faced with a second and contradictory explanation task. (MCF)

Descriptors—*Administrators, Annotated Bibliographies, Attribution Theory, *Burnout, Coping, *Job Satisfaction, Stress Management, *Stress Variables, Vocational Adjustment

In an attempt to classify some of the vast research on job stress, this annotated bibliography presents over 170 references relating to burnout, stress, and job satisfaction among managers, executives, and administrators. Bibliographic information is provided for each reference along with a summary of major ideas, and results and conclusions. The resources, all published within the last 15 years, include both books and journals, and cover theoretical perspectives as well as empirical research, national and international aspects, and public and private settings. References include discussions of specific sources of stress and burnout and actions that can promote health and job satisfaction. The bibliography is directed to practicing managers, business students and faculty, and psychologists. (JAC)

Chronic Mental Patients after Deinstitutionalization: Trends in Living Independence and Vocational Status.

Pub Date—Aug 83

Note—19p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Adjustment (to Environment), Community Programs, *Deinstitutionalization (of Disabled), *Emotional Disturbances, *Employment Level, Followup Studies, Group Homes, *Institutionalized Persons, Place of Residence, Rehabilitation Programs

Identifiers—*Independent Living

Many studies have followed the living and work situations of discharged mental patients in the community. To add to this knowledge base, a study of 52 chronic inpatients was conducted over a 3 1/2 year period to examine the effects of deinstitutionalization on the living situations and vocational status of long-hospitalized patients. The patients averaged 39 years of age and 16 years of hospitalization. They were evaluated for living independence at six points in time, and for vocational status at five points in time, from February 1979 to September 1982. Analysis of results showed no significant trends for vocational status. However, results of a repeated measures trend analysis for locational status suggested a significant linear trend. Hence, when chronic patients were discharged into the community, no significant improvement in their work functioning was apparent, nor was there any noticeable pattern of change. But, subjects did tend to move to increasingly independent living situations, though setbacks were noted after a number of years. These setbacks could be accounted for by community resistance and funding shifts. As long as an orderly move to increasingly independent living situations was planned for and was possible, a number of subjects were able to respond to the demand of higher levels of independence. The findings suggest that the degree of living independence and the level of vocational status attained during deinstitutionalization may be related to a multitude of factors both external and internal to the client; the relative contribution of each is a matter for further investigation. School Social Work. Pupil Personnel Services Recommended Practices and Procedures Manual Series.

Illinois State Board of Education, Springfield.

Pub Date—Sep 83

Note—56p.

Pub Type—Guides—Non-Classroom (055)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Elementary Secondary Education, Needs Assessment, *Program Content, *Program Implementation, *Pupil Personnel Services, Pupil Personnel Workers, *School Community Relationship, School Counseling, School Social Workers, Student Needs

Identifiers—*Illinois

This manual, one of a series of five manuals written for pupil personnel workers in the Illinois schools, is designed to assist school personnel with practices and procedures in school social work. Chapter 1 focuses on philosophy, and briefly introduces major concepts in pupil personnel services including service coordination, community-school relationship, resource identification, needs assessment, and evaluation. A brief description of how to use the manual is also provided. Chapter 2 expands the material in chapter 1, discussing organization of services, needs assessment and implementation procedures, school social work administration and supervision (e.g., files, records, staff allocation, and supervision), and legislation. Chapter 3 discusses the delivery of services, program functions, relationships between school social workers and other school personnel, targets of services (students, par-

ents, staff, community), models of service, and areas of emphasis. Chapter 4 focuses on planning for the future. The seven appendices include acknowledgments and references, a bibliography, a taxonomy of school social work tasks, sample forms, listings of professional journals and bulletins, and Illinois graduate schools of social work. Descriptors—Academic Failure, Adolescents, American Indian Culture, *American Indian Education, *American Indians, Career Planning, College Bound Students, Distance, *Dropout Characteristics, Educationally Disadvantaged, Family Environment, *High Risk Students, Language Dominance, Navajo, Secondary Education, *Student Educational Objectives

Identifiers—*Navajo (Nation)

The school dropout problem among American Indian youths is severe and complicated by the heterogeneous nature of the population and its unique social, cultural, and political history. To investigate the educational experiences of high risk Navajo youths in the areas of language minority status, traditionalism, critical markers, distance to school, and future orientation, 24 adolescents (13 males, 11 females), representing three subgroups: high school dropouts (N=6); high school seniors with no future educational plans (N=9); and college bound high school seniors (N=9), were interviewed. Interview topics included family, school history, language profiles, socialization experiences, perceptions, future plans, and work history. School and community records were also obtained. An analysis of the results showed that students whose families encouraged the development of English appeared to be more likely to do well in school and to graduate. Successful youths came from moderate homes that valued many of the Navajo traditions while adhering to many modern notions. Dropouts perceived themselves as more contemporary. In studying critical markers, student record keeping was found to be lacking as students moved between schools, making identification and planning for "high risk" students difficult. Distance to school and transportation problems affected school attendance, motivation, and the ability to go to school and to keep up with school work. Finally, college bound students had concrete future goals and plans, while graduates had some future goals and plans. Dropouts had little future orientation and no plans to improve their unemployment status. (Case studies of the six dropouts present a qualitative picture of the research findings.) (BL)

Measuring Social Supports.

Pub Date—Aug 83

Note—11p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—College Students, Higher Education, Measurement Techniques, *Negative Attitudes, Predictor Variables, *Psychological Characteristics, *Research Methodology, Social Networks, Social Psychology, *Social Support Groups, Stress Variables, Well Being

Identifiers—*Qualitative Analysis, *Social Interaction, Social Transaction Scale

Although social support has been operationally defined, a lack of conceptual clarity has made measurement modest and unreliable. To investigate the feasibility of measuring social support from a qualitative rather than a quantitative perspective, and to consider negative social interactions in the assessment, 130 college students were administered the newly devised Social Transaction Scale, the Social Network Survey, and three measures of well being. An analysis of the results showed that measures of quality or adequacy of available social resources rather than those of size or other quantitative char-

acteristics of the social network were better predictors of psychological outcomes such as strain or well being. Negative social interactions were identified and divided into conflicts and obstacles. Social obstacles directly affected well being and school strain. Although social conflicts did not directly affect well being or strain, they were influential in the presence of stress. Network size, density, and multiplexity were not significant variables. (BL)

Descriptors—College Graduates, Counselor Educators, Counselor Role, *Counselor Training, *Doctoral Programs, Feedback, *Program Effectiveness, Program Evaluation, Program Improvement, *Psychologists

Identifiers—*Counseling Psychology, Professional Activities, *University of Texas Austin

For a counseling psychology training program to be effective, it must keep up with current trends and developments in the field. To evaluate the Counseling Psychology Training Program (CPTP) at the University of Texas at Austin, 74 doctoral level graduates of the program within the decade of 1973-1982 (51 males, 23 females) completed a questionnaire designed to gather information on demographics, current professional activities, and program evaluation, i.e., graduates' ratings of the CPTP. An analysis of the results showed that the CPTP strengths were the overall quality of the faculty and of the training both in psychotherapy and research, helpful atmosphere, and program flexibility. Weaknesses were the limited focus of the training, limited and late scheduled practice, and a few uninterested faculty. All graduates reported strong support of professional organizations and no difficulty in attaining licensure. All but one respondent were employed in a counseling or clinical psychology setting. Specific recommendations to the program were threefold. First, the program goals and orientation should be reevaluated since a lack of clarity and some dissatisfaction among graduates about the direction and purpose of training was found. Second, students should be provided with more information concerning career options. Finally, the program should consider the issue of counseling psychology identity. A liaison committee between the faculty, students, and graduates was developed to assist in the implementation of the recommendations. (BL)

Identifiers—Congress 98th

These hearings of the Subcommittee on Family and Human Services deal with the effects of divorce and single parenthood on children and adults. Discussion centers on the types of effects and their variations based on the age of the child; the time of divorce; sex of the child; and degree of communication between the child and both parents following divorce. Testimony is presented on public attitudes toward the value of family life, recent trends in the

incidence of divorce, and legal and psychological aspects of child custody and child kidnapping by parents. The proceedings also deal with ways of helping families, including counseling, mediation services, economic support, and parent education. The role of the government and social service agencies in strengthening families is discussed. Proceedings of the second day of hearings focus on the physical, emotional and economic effects of broken marriages on men and women, including both parents and grandparents. The testimony of nine witnesses is presented as well as 19 prepared statements (from doctors, senators, researchers, social workers, and counselors), and eight sets of prepared questions and answers. Descriptors—*Blacks, College Students, *Counselor Characteristics, Counselor Client Relationship, Females, Higher Education, *Racial Factors, *Self Disclosure (Individuals), *Therapists, Whites

Identifiers—Client Behavior, *Cross Race Interaction, *Reciprocity (Communication)

Self-disclosure, defined as any information about oneself which one person communicates verbally to another, is an important aspect of the therapeutic process. The strongest determinant of disclosure is disclosure itself—the reciprocity effect. To explore the reciprocity effect in the context of biracial counseling, 33 black female college students participated in an analogue study consisting of an interview with a female therapist they believed was either white or black. The therapist's level of self-disclosure was also manipulated. Results showed that increasing therapist disclosure increased trustworthiness when the therapist was black; it nonsignificantly decreased the therapist's trustworthiness when the therapist was white, suggesting that the white therapist's disclosure may have been considered out of place, inappropriate, or even condescending. A second finding was that the two measures of self-disclosure, the Jourard self-report scale, and the Chelune behavioral measures, did not significantly correlate. This may reflect racial differences in how self-disclosure is defined. Given the deleterious effects uncovered concerning cross-racial disclosure, a replication field study would raise ethical problems. (JAC)

Relocation: Black and White Dual Career Families on the Move.

Pub Date—Aug 83
Note—10p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).
Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.
Descriptors—Adjustment (to Environment), Blacks, *Dual Career Family, Empathy, *Family Mobility, *Occupational Mobility, *Racial Differences, *Relocation, Sex Differences, Spouses, Stress Variables, Whites

Relocation of dual career families often translates into career advancement for the spouse whose job prospects initiate the move and career disruption for the spouse who follows. To describe the relocation concerns of men and women in dual career marriages, 32 professional couples were interviewed. Half the sample were black and half were white, and childless couples as well as parents were included. Results showed that a move was initiated by a job offer for the husband for 13 of the couples, by a job offer for the wife for 4 couples, and by offers for both spouses for 2 couples. Of the 13 wives who moved in response to their husband's job offer, 6 had difficulty finding work, 3 saw the move as emotionally uprooting, and 3 had no problems. Husbands did not always acknowledge the extent of the problems experienced by their wives. No differences attributed to race were found for job moves determined by husbands or wives, or in the degree of empathy for

the dislocated spouse. The findings suggest that wives disproportionately experience disruption, and their husbands tend to lack empathy. (JAC)

Descriptors—*Counseling Techniques, *Counselor Role, Elementary Secondary Education, Problem Solving, Research Design, *Research Opportunities, *Research Utilization, *School Psychologists
This book emphasizes the importance of research to the school psychologist. Written in a conversational style, it looks at research as a tool for problem solving and a basis for action rather than as an academic exercise. Research is described as an interaction, a point of contact to get things moving, a different way of seeing a problem. The usual parts of a research article—literature review, methodology, results and conclusions—are reviewed and some of their shortcomings are discussed. Guidelines are presented for psychologists who want to initiate the research role. Research is defined and the qualifications of the researcher are discussed. Examples of research as a problem solving intervention are discussed in three sections: program evaluation studies, N=1 projects, and descriptive and predictive projects. Each is illustrated by case examples. Although psychology is an applied profession, the place of research in school psychology is described as a way of informing and directing practice. The importance of sharing information with the public is addressed. Research as it appears in school psychology journals is reviewed, and the problem of why research is not carried out more frequently by school-based psychologists is discussed. The use of computers by school psychologists is noted briefly. (JAC)

The psychology of personality has always attempted to define the individual in relation to normative data. However, personality theory should be attempting to define individuals from an interactive measurement model, examining the individual in terms of his own subjective impressions about what he does, with a conception of what he does not do. Using a dialectical model, the reasoning process by which individuals formulate and express subjective judgments about personality can be studied. In interactive measurement the focus is on the nature of the psychological process that generates a particular response rather than on the individual's response, per se. The subjective judgment process can be formally represented by an equation (given in the text) which allows the researcher to quantify the subjective judgment into a given value on a + 1.00 range, representing the subject's covert judgment about a particular construct. In discerning the nature of the context for the judgment, dialectical reasoning comes into play. In making the subjective judgment the individual's mind defines the judgment's polar negations and warrants a judgment about them, thus defining the context for the judgment. Empirical research designed to test the interactive measurement model and dialectical reasoning found that, for the majority of subjects, the dialectical model was superior in defining the judgment process. (An exercise illustrating the model and implications for personality theory are included.) (BL)

Identifiers—*Finland (Helsinki)

Socio-emotional education has been given very little attention in Finland, either on the general level or within specific subjects. To examine the empathy level of Helsinki students and the influence of an empathy campaign on the development of empathy, 665 students, aged 11 to 18, (49 percent female, 51 percent male) were exposed to an empathy campaign. The campaign was presented according to various intensity levels from the mildest level, which consisted of a symbolic poster on the wall and a morning ceremony, to the most intensive level, which consisted of a week-long theme program planned by students and teachers. A control group consisting of 92 students received no empathy campaign. The Mehrabian-Epstein Scale on emotional empathy and teacher and peer ratings of prosocial behavior were used as pre- and post-test measures of campaign effectiveness. An analysis of the results showed that empathy can be increased through school campaigns when the campaign is intensive, and when the students take part in the planning and organizing. Overall, girls were significantly more empathetic than boys. However, the emotional re-

ceptiveness of the test group boys increased during the campaign significantly more than other boys or girls in the control group. Positive changes were greatest in the lower grade students of the test group. The most even development of empathy took place in the group which had the most intensive campaign. (BL)

Descriptors—Age Differences, *Aging (Individuals), *Cognitive Processes, Language Patterns, *Long Term Memory, Networks, Older Adults, *Semantics, Young Adults

Identifiers—Automatic Language Processing, Effort, *Semantic Priming

Research on the cognitive processes used in semantic priming has shown that the processing of a given stimulus is speeded by prior processing of a related stimulus as the result of automatic and/or effortful priming. To investigate the effect of age on semantic priming, two independent studies were conducted at Pomona College in California and at Georgetown University in Washington, D.C. In the Pomona study, 64 adults (32 young adults, 32 older adults) decided whether or not a visually presented sequence of letters (target) was a word after being shown a prime. Semantic relatedness, participant expectations for the target, and stimulus onset asynchrony (SOA), i.e., the interval between the onset of the prime and the onset of the target, served as independent variables. An analysis of the results showed no evidence that older adults have a more limited ability to switch attention, or that they require more time than younger adults to do so. No age differences in the effortful components of semantic priming, nor in automatic priming at the 410 msec stimulus onset were found. In the Georgetown study, 108 adults made decisions on target words after being shown a prime, similar to the Pomona study. The stimulus onset was varied between subjects. An analysis of the results showed that, as in the Pomona study, no age differences in priming occurred at stimulus onsets of 450 and 1000 msec. However, at 150 msec, age differences in automatic semantic priming did occur, with younger adults showing significantly more effect. (BL)

Descriptors—Behavior Modification, *Counseling Objectives, Counseling Techniques, Counseling Theories, Counselor Attitudes, *Counselor Characteristics, Counselor Client Relationship, *Counselor Role, *Humanism, *Psychotherapy, Therapists

Identifiers—Psychoanalytic Theory
Based on an earlier list of characteristics, ten assertions were derived about the nature of psychotherapy upon which it was believed that humanistic therapists would agree. These assertions were then submitted to three groups of therapists (111 returns) listed in the "National Register of Health Service Providers in Psychology": behaviorists, psychoanalysts, and humanists. Each individual was asked to rate that person's agreement with each statement on a five-point scale. It was hypothesized that the humanists would show a recognizably different response pattern. Humanists did agree, differently from the others, that therapy should focus on the client's present subjective experience, new patterns of client acting and thinking are to be encouraged, and the therapist's role is essentially that of a facilitator or catalyst. They were more likely to be uncertain than the other two groups (which disagreed) about the idea that the therapeutic relationship is

qualitatively different from other relationships, and fell midway between the other two groups on disagreeing that therapy should focus on feelings instead of thoughts or beliefs. All three groups agreed on the importance of honest communication, client responsibility for client behavior, and paying attention to client bodily expressions of conflict. They also all failed to support the assertion that therapist adjustment level presents an upper limit to client adjustment level. Some reasons were suggested for the lack of differentiating patterns where they existed. (Author)

Identifiers—Life Planning

This manual on stress management is designed to help graduate students whose performance and continued progress in their academic program is impaired by various stressors. The manual contains instructions and materials for selection and training of staff, initiating an intervention, and evaluation of the program. Suggestions based on the authors' field trials are included. The manual describes a series of ten content modules, each addressing a different source of stress and/or teaching a different coping strategy. The modules can be combined into a single session workshop format or used in an ongoing program of small groups. Specific topics addressed by the modules include: self-assessment for potential stressors, relaxation training, social support building, time management, utilization of campus/community resources, cognitive behavioral approaches for coping with stress, behavioral self-management, professional development, and life planning. Each module contains instructions for presenting subject matter both didactically and experientially, together with copies of all required handouts and materials. References for further reading are included with each module. Suggestions for modifications in the program necessary for various special populations, such as international students, are also included. (Author/BL)

Identifiers—Paradigm, Social Ecology

The "Bottled Pain" project, a drug abuse prevention program in 24 Lutheran congregations in southern Minnesota, is based on a social ecology paradigm designed to prevent drug abuse through the development of socially supportive relationships and through using the environment as a natural strength within the community. According to the social ecology design, the individual and his/her well being are the central focus. The thrust of the program is to encourage individual empowerment through mutual social support (including spending time together, problem solving, physical aid, and emotional support) and interdependency (in behaviors, feelings, values, and resources). Empowerment

brings a feeling of surprise in that the individual is helped while helping others. Finally, empowerment renews the individual's spirit and hope through the sharing of mutual resources and settings. Though evaluation of the prevention program also focuses on outcome and impact, process evaluation is of central importance. (BL)

Descriptors—*Child Custody, *Family Problems, *Incidence, National Surveys, Sampling, Social Problems

Identifiers—*Parent Kidnapping

Although popular literature cites between 25,000 and 100,000 parental child snatchings a year, no empirical studies have been conducted to support this estimate. To determine an empirical estimate of the extent of parental child snatchings, telephone interviews were conducted by Louis Harris and Associates with a representative cross section of adults, 18 years of age and over, at 3,745 sampling points within the United States, between June and August of 1982. Respondents were read a definition of child snatching and were subsequently asked if they knew of an instance of parental child snatching in their family or in a family they personally knew. Respondents who answered "yes" were asked questions about the number of cases, the children involved, and how they knew of the incident. An analysis of the results showed that 273 respondents (7.3 percent) reported exposure to an incident of parental child snatching, with 55 respondents (1.5 percent) reporting personal involvement within the previous 12 months. Projecting this rate to 83.5 million households, assuming that at least two households are involved in each incident of child snatching, and allowing for a sample error of .39 percent, there are an estimated 459,000 to 751,000 incidents of child snatching each year. Given that more than two households could be personally involved, this estimate could be considered the highest possible projection, making the 100,000 popular estimate very low. This preliminary incidence survey is useful to those trying to establish the full extent of the issue as well as to researchers who wish to study further this hidden family problem. (Author/BL)

Descriptors—*Androgyny, College Students, Higher Education, *Identification (Psychology), *Modeling (Psychology), *Parent Influence, Parent Role, Perception, Personality Development, Sex Differences, *Sex Role, Socialization

Social learning theory maintains that parents influence sex development by modeling and reinforcing masculinity and femininity. To further examine the effects of parental modeling and reinforcement antecedents on sex role development, 103 college students (52 female, 51 male) who had been previously categorized as masculine, feminine, or androgynous, completed two Bem Sex Role Inventory Scales (BSRI), to assess perceptions of parents' sex roles, and the Parent Child Relations Questionnaire II, to obtain retrospective reports of parent behavior in terms of love, attention, casualness, rejection, and demand. Parents (N=82) also completed the BSRI. An analysis of the results showed that for both the parental modeling and behavior variables the social learning theory was only modestly supported for females. While androgynous females perceived mothers to be more masculine than traditional feminine females, none of the parent behavior variables differentiated among the female sex role groups.

However, parent behaviors contributed significantly to the prediction of daughters' masculinity and femininity. Masculinity in females was associated with the perception of accepting and masculine fathers, and attentive and masculine mothers. Femininity was best predicted from the perceived femininity and attentiveness of mothers and the perceived femininity and acceptance of fathers. In males, parent behavior was most influential in sex role development, particularly for sons' androgynous development. Androgynous males perceived both parents as loving and attentive and perceived a high degree of femininity in fathers. The best predictors of masculinity for males were the perception of paternal acceptance and maternal affection; femininity was best predicted from the perception of femininity in fathers and affection from mothers. Information on child sexual abuse is most meaningful and effective when given to the child from a parent. To investigate the kinds of prevention information that is exchanged in households and the obstacles to effective exchange, 521 Boston parents (187 male, 334 female), with children aged 6 to 14, were interviewed. The interview focused on knowledge of sexual abuse, instruction given to children, incidence and how it was handled, and a self-administered section on respondents' childhood sexual abuse experiences. An analysis of the results show that in spite of a surprising amount of knowledge about the problem of sexual abuse, only 29 percent of the parents had talked with their children about it. Mothers tended to discuss the subject with their children more than fathers, with the majority of parents feeling that age 9 was an appropriate age for talking about sexual abuse. Overall, parents tended to be vague in their discussions and relatively complacent, doubting that abuse would occur to their child in their neighborhood. Further reasons for avoiding talking with their children were age of child, fear of frightening the child, and overall reticence in discussing sex. The two biggest motivators for parents communicating with children about sexual abuse were hearing about abuse that happened to someone else in the neighborhood or social network, and having been victimized themselves. Descriptors—*College Students, Coping, *Emotional Adjustment, Higher Education, Metacognition, *Problem Solving, *Psychological Patterns, *Student Adjustment

Despite increased interest in real life problem solving with both children and adults, the question of whether problem solving is related to psychological adjustment remains unanswered. To examine whether college students' self-appraisal of their problem solving skills is related to their psychological adjustment, 671 students took the Problem Solving Inventory during a mass testing program at the beginning of the semester. Subsequently, 80 subjects were selected for additional participation; 67 of

those subjects completed the study by responding to the Minnesota Multiphasic Personality Inventory (MMPI). The data were analyzed on a scale by scale basis, as well as through profile analyses by two psychologists skilled in the interpretation of MMPI profiles. Results revealed that self-appraised ineffective (as opposed to effective) problem solvers scored more negatively on a general index of psychological adjustment (the sum of all the clinical scales), differed on all of the hypothesized validity and clinical scales, and differed on all of the hypothesized additional scales. In addition, the profile analyses by the two psychologists suggested that the self-appraised ineffective problem solvers were less well adjusted psychologically than the self-appraised effective problem solvers, thus supporting the findings from the scale by scale analyses. The findings suggest that whereas behavioral adjustment was previously linked to the ability to cope with problematic situations, perhaps an equally important variable is the person's appraisal of his/her coping ability. Descriptors—Age Differences, Attitude Change, Behavior Patterns, *College Students, Foreign Countries, Higher Education, *Locus of Control, *Nutrition, Physiology, Sex Differences, *Smoking, *Student Attitudes

Identifiers—Canada

Research has shown that many behaviors previously thought to be purely psychological in origin do, in fact, have a physiological basis. To examine the relationship of smoking behavior to locus of control, and to attitudes toward, knowledge about, and behavior with respect to nutrition, 116 Canadian undergraduate students completed the Nutrition Questionnaire (consisting of attitude, knowledge, and behavior scales, and miscellaneous questions) and Rotter's Locus of Control Scale. Contrary to expectations, heavy smokers were found to be significantly more internal than either non-smokers or light smokers. No differences between smoking behavior and nutritional knowledge were found, but females were significantly more knowledgeable about nutrition than males. Females also responded more positively to the pro-nutrition factors of the Nutrition Attitude Scale. Caffeine and alcohol consumption were positively associated with smoking behavior and age. No sex differences in caffeine and alcohol consumption emerged. The findings suggest that with age such habits acquire increasing self-acceptance. (JAC)

Descriptors—*Attribution Theory, *Behavior Patterns, College Students, *Feedback, Higher Education, Interests, *Reinforcement, Rewards, Social Psychology

Identifiers—*Intrinsic Motivation, *Overjustification

Within the area of attribution theory, an overjustification effect is inferred if, following reward for an intrinsically interesting activity, individuals subsequently show less interest in that activity than comparable individuals who receive no reward. In an attempt to isolate the overjustification effect, 60 college students (30 male, 30 female) played 14 games of pinball with two eight-minute free periods before and after the games, in which subjects were told they could do as they wished. Subjects were assigned to one of six treatment conditions: no reward for playing pinball (intrinsic); a lump sum payment (noncontingent); feedback on a continuous or variable reinforcement schedule without payment (contingent feedback); or feedback on the same schedule with payment (contingent payment). An analysis of

the results for amount of free time spent playing revealed no overjustification effect. Subjects given continuous feedback (paid or unpaid) liked the task more. Only variable reinforcement appeared to maintain play during a "free-choice" period. (Author/BL)

Commons Dilemma Choices in Small vs. Large Groups.

Pub Date—Aug 83

Note—20p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Behavior Patterns, College Students, Comparative Analysis, Fines (Penalties), *Group Behavior, Higher Education, Intergroup Relations, Problem Solving, *Psychological Characteristics, Psychological Patterns, Simulation, Social Behavior, Withdrawal (Psychology)

Identifiers—*Commons Dilemma Choices, *Group Size

The purpose of the Commons Game is to teach students how social traps work; that is, that short-term individual gain tends to dominate long-term collective gain. Simulations of Commons Dilemma have grown considerably in the last decade; however, the research has used small face-to-face groups to study behavior in the Commons. To compare the choices individuals make in large, indeterminant sized groups with those made in small face-to-face groups, 105 college students initially played a 1-trial dilemma game. Subsequently, groups of seven students either played a 75-trial Commons Game or discussed their options for 10 minutes (to cooperate, to exploit, or to withdraw). Both groups then played the 1-trial game again, once in a large anonymous group and once in their small face-to-face group. Half the players in each condition could fine others for exploitation. An analysis of the results showed that players chose differently in a Commons Dilemma depending upon the size of the referent group in which the choices were made. Players chose the withdrawal option at a high level in the large group but rarely in the small group, suggesting that cooperation, greed, and the desire not to be a sucker operate in the large group, but only the first two operate in the small group. The possibility of being fined for defection did not deter exploitation nor increase cooperation prior to playing the game. After the game or small group discussion, the possibility of being fined did make a difference, suggesting that to be effective fines must be experienced or talked about with others. Finally, subjects who played the game made fewer cooperative choices and more withdrawal responses in the large referent group than those who did not play the game. (BL)

James, Richard And Others
The Effect of Weight Training on the Self-Concept of Male Undergraduates.

Spons Agency—Memphis State Univ., Tenn.

Pub Date—82

Grant—11-22332-0001

Note—23p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Body Image, *College Students, *Emotional Response, Exercise, Higher Education, *Males, Mental Health, Muscular Strength, Physical Education, Physical Fitness, Psychological Characteristics, *Self Concept, *Weightlifting

From ancient times, physical exercise has been linked to good mental health and positive self-concepts. To investigate the effects of weight training on self-concept, 62 college males participated in a one semester (40 hours) weight training, physical education course. Subjects were pre- and post-tested on subscales of the Tennessee Self Concept Scale (TSCS), and were asked why they chose the weight training class. A control group (N=35) of males also completed the TSCS. An analysis of the results showed that prior to weight training, experimental students exhibited significantly lower self-concept scores than did the control group. After weight training, the students showed significant positive changes in self-satisfaction, physical self and personal self. Specifically, physical self-concept, was significantly increased after weight training. Follow-up interviews did not confirm the

positive changes found on the TSCS. The findings from the study suggest that an exercise program stressing the components of muscular endurance and muscular strength increases self-concept. Finally, counselors working with students who manifest low self-concept might be aware that participation in such a physical exercise program might be a useful adjunct to talking through negative self-images. Descriptors—Adults, *Behavior Modification, Comparative Analysis, Coping, Habit Formation, Intervention, *Prevention, Psychophysiology, Relaxation Training, *Smoking

Identifiers—Relapse

Although smoking cessation techniques have been effective, few programs have long term results. To investigate the effectiveness of a tobacco dependence relapse prevention program, 123 adult smokers (51 male, 72 female) voluntarily participated in one of four small group treatment conditions (6 or 30 second aversive smoking plus skill training, or 6 or 30 second aversive smoking plus discussion control) over a 14-week period. Skill training focused on relaxation, commitment enhancement, and relapse prevention skills, while discussion control focused on group discussions of habit breaking and desire for change. Prior to treatment and at 3, 6, 26, and 52 weeks post-treatment, subjects reported the number of cigarettes smoked in the past 24 hours, provided blood and air samples, and completed an assessment battery focusing on mood, anxiety, cost/benefits, withdrawal symptoms, behavior, and expectations. An analysis of the results showed that differences in abstinence rates and in number of cigarettes smoked favored the skill training condition at 6 and 52 weeks post-treatment. Exploratory analyses indicated that at 52 weeks lighter smokers (20 cigarettes per day or fewer at pretreatment) were more likely than heavier smokers to be favorably affected by the skill training condition. Subjects assigned to the skill training condition were more likely to report use of coping skills, but did not differ from the discussion condition in perceived costs and benefits of change or of smoking, or in mood dysphoria or physical complaints. Abstinence subjects reported less mood disturbance than nonabstinent subjects at weeks 3, 6, and 26, and fewer physical complaints at week 52. (Author/BL)

Descriptors—*Cross Cultural Studies, Cross Cultural Training, *Cultural Awareness, Cultural Differences, *Psychology, *Research Utilization, Social Science Research

Cross-cultural psychology refers to the collective efforts of researchers who work among people who live in different societies, with different languages and different forms of government. There are a number of benefits to the study of human behavior which can be accrued by carrying out research in various cultures, largely concerned with better theory development and better conceptualization of important variables. Some of the benefits include theory expansion, increasing the range of variables, unconfounding variables, and studying the context in which behavior occurs. Another way of looking at cross-cultural psychology is to look at its contributions to both general and applied psychology, including cultural influences on perception, cognition, motivation, interpersonal attraction, and group dy-

namics. Applications of cross-cultural psychology include validation of employee selection and appraisal procedures in each of the cultures in which they are to be used. To reduce the negative effects of cultural differences, six kinds of cultural training have been identified: (1) information or fact-oriented training; (2) attribution training; (3) cultural awareness; (4) cognitive-behavior modification; (5) experiential learning; and (6) the interaction approach. Cross-cultural psychology can contribute to a more internationally-oriented education for college students. (JAC)

Descriptors—Adult Development, Affective Behavior, Attitude Change, *Divorce, Emotional Adjustment, *Father Attitudes, *Fathers, *Parent Child Relationship, Parent Role, Psychological Patterns, *Sex Role, Stress Variables, *Widowed Stereotypically masculine men tend to adopt family roles in which they are more important symbolically, as models for power and authority, than realistically, as teachers, care takers and nurturers. For these men, nurturant-expressive involvement with their children is still the exclusive domain of women. Men who have integrated affective behavior, interdependence, and spontaneity into their personal lives are usually older than the adolescent and college age students who are frequent subjects of studies on the male sex role. The sex role standards with which many men evaluate their own behavior undergo a number of changes throughout the adult life span, occurring in response to increasingly significant discrepancies between the behaviors required by their concept of masculinity and the age norms held by others in the culture. These men can resolve this conflict either by continuing to act in accordance with their earlier male standards, or by modifying their conception of male sex role standards and adopting a fathering role within the family. Non-normative events, such as divorce or the death of a spouse, can also lead to an expansion of men's concept of masculinity and an expansion of their involvement with children. It is important for children, as well as men, that fathers not respond to the stress of divorce or the loss of the mother by adopting a more rigid adherence to traditional male sex role standards, but learn to implement a more emergent model. Men will only be able to relate to their children in an emotionally expressive, sensitive and spontaneous manner if they are able to view these behaviors as consistent with their conception of male sex role standards. Descriptors—Behavior Change, *Hypnosis, Predictor Variables, *Smoking

Identifiers—Self Efficacy, *Treatment Outcomes

Prior studies of hypnotic treatment of smoking have reported abstinence rates of between 17 and 88 percent at six months, but few have investigated procedures or forms of suggestions. To compare the effectiveness of positive and negative hypnotic suggestions and self-hypnosis for cessation of smoking, 32 subjects were assigned to one of four treatment groups: (1) negative suggestions alone; (2) negative suggestions plus self-hypnosis; (3) positive suggestions alone; and (4) positive suggestions plus self-hypnosis. Subjects also completed a series of smoking history questionnaires, the Self-Efficacy for Smoking Avoidance Questionnaire, to assess expectations for smoking cessation; and the Horn-Waingrow Scale, used to delineate types of smokers. Treatment involved three 1-hour sessions, with those not abstinent at post-treatment or follow-up receiving three additional sessions. Outcome was

assessed at post-treatment and 1, 2, 3, and 6 months following the final treatment session. Results indicated that positive suggestions were more efficacious than negative. Treatment was most successful for subjects who did not see themselves as habitual smokers. While ratings of self-efficacy at pre-test and following treatment were not predictive of later self-efficacy, subjects' ratings at 1 month post-treatment were predictive of later self-efficacy ratings. Are the Needs of the Educated Retiree Being Met? Research Brief.

Pub Date—Apr 83

Note—28p; Paper presented at the Annual Meeting of the Western Gerontological Society (29th, Albuquerque, NM, April 16-20, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Adjustment (to Environment), Continuing Education, *Counseling Services, Educational Background, *Expectation, Gerontology, *Older Adults, *Professional Personnel, *Retirement

Identifiers—Institute for Retired Professionals NY

Gerontologists and others working with the elderly have tended to treat them according to their chronological age. In order to compare retired professionals' perceived expectations of retirement with their subsequent realization, to discover possible discrepancies, and to examine the adequacy of current pre- and post-treatment counseling programs available for this population, 147 members of the Institute for Retired Professionals in New York City completed a questionnaire on retirement life. Analyses of results showed a high attainment of retirement expectations. However, few pre- or post-retirement counseling services were available for this professional group. The eight recommendations for action based on the findings include the establishment of peer counseling programs, health information services, seminars and course work for intellectual stimulation, and involving the retired professional in program development. (The nine page questionnaire is appended.) (MCF)

Competence in Serving Children: Credentials Professionalism and Public Policy.

Pub Date—28 Aug 83

Note—23p; An earlier version of this paper was presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Opinion Papers (120)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Child Psychology, Clinical Psychology, *Competence, *Counselor Qualifications, *Credentials, Developmental Psychology, Family Counseling, Mental Health, Position Papers, *Professional Education, *Psychologists, Public Policy, *Retraining, Standards

Professional competency in psychologists wishing to treat children and families is an area of considerable concern and disagreement. Three types of practitioners comprise the bulk of the problem: clinical psychologists, who lack specific child-oriented training; developmental psychologists, who wish to serve children but lack traditional clinical training; and developmental psychologists, who lack clinical training but are currently serving children. The American Psychological Association's (APA) Standards for Providers of Psychological Services recognizes the single route theory to competency, which maintains that retraining in a formal program integrating formal classroom and experiential preparation, is the only true road. Recently, however, representatives of APA and its divisions have recognized that psychologists may become health care providers by a variety of routes, adopting a broader, three-component definition of clinical psychologist which includes state licensure, doctoral degree in psychology from a regionally accredited institution of higher learning, and a 2-year internship in a health service setting. Training deficits or competence gaps currently exist either in classroom or experiential preparation; single route theorists believe that these must be acquired simultaneously in an integrated fashion. However, many graduates of APA approved programs lack either theoretical or clinical training in developmental psychology. To

ameliorate the competence gap, the credentials and competencies of individual psychologists should be reviewed and specific goal-oriented remedial work should be undertaken. To assist in this endeavor a new organizational division within APA is recommended: the Bureau of Academic Retraining Facilities. APA-approved internship sites are also recommended, designated as Technical Uniform Retraining Facilities. (BL)

Work Identity and Marital Adjustment in
Blue-Collar Men.

Pub Date—Aug 83

Note—20p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).
Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Adults, *Age Differences, *Blue Collar Occupations, *Difficulty Level, Emotional Response, Family Involvement, Job Skills, *Males, *Marital Satisfaction, Predictor Variables, Work Environment

Identifiers—*Extrinsic Motivation

The expansion theory, which maintains that an individual has unlimited energy to expend in work or marital involvement, and the drain theory, which maintains that an individual's energy for work can be depleted by overcommitment to family, compete with each other in explaining the effect of worklife on the adult male's family relationships. To investigate the influence of work factors upon marital adjustment in blue collar males, 40 husbands from traditional families, with a mean age of 33 and a mean marital status of 10 years, participated in the Adult Identity Interview and completed the Marital Adjustment Test. The Dictionary of Occupational Titles was used to make quantitative complexity rankings of their jobs. An analysis of the results showed that, in support of the expansion theory, work complexity, intrinsic work strength, and income were relatively unimportant as independent variables compared to extrinsic work strength and age. Workers who reported extrinsic factors to be important in their work, such as high pay, job security, and pleasant working environment, also reported high marital adjustment. For those who perceived their work to be important for extrinsic reasons, the majority had favorable perceptions. However, the effect of extrinsic work commitment was mediated by age, which also was a positive predictor of marital adjustment. Younger workers were more committed to their work for extrinsic reasons than were older workers. (BL)

Descriptors—Attribution Theory, Gerontology, *Interpersonal Relationship, *Models, Older Adults, *Parent Child Relationship

Identifiers—*Adult Children, *Caregivers

Parents and children are faced with a variety of challenges over the course of their lives together, yet most research centers only on the early stages of the family life cycle. One major change occurs as parents grow older and need increasing amounts of help from their children. Kelley has developed a general theory of personal relationships which may increase understanding of parent-child interactions when children provide care for parents in later life. Kelley's model centers around three basic ideas: (1) the essence of any relationship is interdependence; (2) in personal relationships people take into account the effects of their behavior on their partner and sometimes behave in ways not in their own best interest; and (3) these transformations of behavior provide information which the participants use to form impressions of each other and to make judge-

ments about their partner's attitudes toward them as individuals. When one member of a relationship begins to care for the other, changes or transformations occur. Possible reasons why children help their parents fall into two categories: responsibility (especially when no alternative sources of help are available); or affection. Kelley's model is based on the assumption that the way a partner responds to the control he/she has over the other's outcomes provides evidence about interpersonal attitudes. In the case of the child who cares for a parent, a transformation is clearly involved, with rewards and costs different from those available previously. Although recent studies have emphasized the negative consequences of caregiving, both parent and caregiver can be better understood through application of Kelley's model. (JAC)

Descriptors—Adolescent Development, *Adolescents, *Community Education, *Conferences, *Early Parenthood, Group Discussion, Models, Parenthood Education, Peer Groups, Peer Teaching, Program Descriptions, Secondary Education, *Sex Education, Sexuality

Identifiers—Maine (Bangor)

Although information regarding the consequences of adolescent pregnancy and childbirth is disseminated, the recipients of that information are most often adults. To present this information directly to never-pregnant adolescents, an annual conference, outside of the authority structure of the school was developed in Bangor, Maine. The three primary outcome goals of the conference are to identify community resources, identify resources for school-based follow-up programs, and to encourage teens to serve as resources to their peers. The conference is coordinated by four volunteer professionals, with an advisory panel of teens and adults assisting in planning the agenda and in identifying topics, facilitators, teen parents, and community professionals for panel discussions and film presentations. Community agencies and parents are solicited to underwrite costs. A small registration fee helps offset costs without prohibiting attendance. The organizers handle hall rental and advertising. The conference is held during school hours to maximize attendance. Evaluations of the conferences have shown that attendance increased from 180 the first year to 600 in subsequent years. Information about contraception, learning to say "no" to sexual involvement, and communicating with parents is consistently cited as most useful. Both films and teen panel discussions are rated highly. The focus of the conference has expanded from teenage pregnancy and sexuality to general adolescent development. (BL)

Motivation and Creativity: Effects of Motivational Orientation on Creative Writers.

Pub Date—Aug 83

Note—23p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—College Students, *Creative Writing, Creativity, Higher Education, *Individual Characteristics, Individual Needs, Motivation, Perception, *Performance Factors, Predictor Variables, Psychological Characteristics

Identifiers—*Intrinsic Motivation

This study directly tested the hypothesis that intrinsic motivation is conducive to creativity and extrinsic motivation is detrimental. Chosen because they identified themselves as actively involved in creative writing, 72 young adults participated in individual laboratory sessions where they were asked to write two brief poems. Before writing the second poem, subjects in an intrinsic orientation condition completed a questionnaire that focused on intrinsic reasons for being involved in writing. Subjects in an extrinsic orientation condition completed a ques-

tionnaire that focused on extrinsic reasons. Those in a control condition were not given a questionnaire on reasons for writing. Although there were no initial differences in the first poems written, there were significant differences in the creativity of the poems written after the experimental manipulations. Poems written under an extrinsic orientation were significantly less creative than those written in the other two conditions. Implications for social-psychological and individual-difference conceptions of creativity are discussed. (Author)

Cunningham, Joseph G.
Nonverbal Affective Communication in Children: Theoretical and Clinical Relevance.

Pub Date—Aug 83

Note—19p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Affective Behavior, Age Differences, *Children, Cognitive Development, Developmental Psychology, Developmental Stages, Elementary Education, *Emotional Response, Music, *Nonverbal Communication, Perception, Preschool Education, Socioeconomic Status, *Young Children

Identifiers—Facial Expressions

Young children's nonverbal affective expression and communication reveals an emotional complexity and sensitivity which exceeds their verbal abilities. To investigate the development of nonverbal emotional communication in young children, two studies were undertaken. In the first study, equal numbers of 5- and 11-year-old children from two schools were videotaped using facial expressions to show affective states (happy, sad, angry). The children subsequently interpreted the expressions of unfamiliar children from the other school. An analysis of the results showed that young children were able to communicate affect through facial expressions and that the interpretative ability of 5-year-old children was on a par with 11-year-old children for the happy and angry expressions of peers. In the second study, 112 children, equally divided among 4-, 5-, 6-, and 19-year-olds, interpreted verbal/vocal and musical representations of affect (happy, sad, angry, afraid). An analysis of the results showed considerable consistency in the understanding of affective meaning in music for 4- to 6-year-old children and adults. Performance with sad and angry pieces improved from 4 to 5 years, declined between 5 and 6 years, then increased significantly between the 6 year and adult levels. The 4-year-old children were able to identify the fearful selections better than the 5- and 6-year-old children. The results of these studies led to the examination of multidimensional aspects of nonverbal affective communication between parents and children in a naturalistic setting, through the analysis of videotaped morning goodbyes of parent-child dyads at a daycare center. Preliminary results showed that, contrary to reported differences in verbal parent-child interactions by socioeconomic status, no such differences have been found in nonverbal affective exchanges. (Implications for cognitive-developmental models and clinical research and practice are discussed.) (BL)

Descriptors—*Cognitive Processes, Intelligence, Life Satisfaction, *Longitudinal Studies, *Older Adults, Personality Studies, *Personality Traits, Psychological Characteristics, *Reliability, Self Esteem, Sex Differences, Social Characteristics

Identifiers—Berkeley Growth Study, *Stability (Personal)

Although the consistency of personality characteristics has been identified in groups of persons studied from infancy into young adulthood, few such studies have been able to include older adults. To investigate the stability of personality and social

characteristics among young-old and old-old adults, 72 adults (51 female, 21 male) from the Berkeley Growth Study group were rated on 21 personal-social characteristics through intensive interviews. The subjects were initially interviewed using these characteristics in 1928 (young adults), and again in 1968 (young-old adults) and in 1982 (old-old adults, with an age range of 73 to 93 years). In 1982, the mean Wechsler Adult Intelligence Scale IQ for the group was 119. An analysis of the results showed a considerable amount of stability across the 50-year time span, particularly for cognitive characteristics. Intelligence, accuracy of thinking, poise, and talkativeness maintained strong and significant correlations for both men and women across time. In addition, both men and women became less restless, less critical, less worrisome, less excitable, more interested in their children, and had an increased sense of self-esteem in the transition from young-old to old-old age. In cognitive variables and life satisfaction, men tended to score higher than women, while women tended to score higher than men in personal-social characteristics. (BL)

Descriptors—Alcoholic Beverages, Alcoholism, Community Programs, *Drinking, Drug Abuse, *Drug Education, *Educational Environment, Parent Participation, *Youth Problems

It has been argued that alcoholism is the single worst social affliction in the world. In addition to the dangers of drinking and driving, alcohol and other drugs also have a detrimental and disruptive impact on education. Harassed principals and teachers are distracted from the main mission of education by violence and other anti-social behavior brought about in part by the direct or indirect use of drugs. Alcohol abuse lowers performance and grades, creates disruptive classroom behavior, increases school vandalism, and impedes the learning process for non-drinking students. For these reasons the President has made the prevention of alcohol and drug abuse a high priority. And the key to prevention is education concerning the truth about alcohol. For 10 years the Department of Education has been developing school-based alcohol and drug abuse education programs. The Department's primary goal is to provide leadership, training and technical assistance to school systems to use local resources to deal with local problems. The program has established teams of school and community personnel, supported by training and follow-up assistance, in every state and territory. A growing number of parent groups is springing up all over the country as well. Those interested in acting for change can make a difference that may literally change the world. (JAC)

Real vs. Ideal Self Discrepancy in Bulimics.

Pub Date—Apr 83

Note—13p.; Paper presented at the Annual Convention of the Rocky Mountain Psychological Association (Snowbird, UT, April 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Body Image, Eating Habits, *Emotional Disturbances, Females, Models, Psychological Patterns, Q Methodology, Self Concept, *Self Congruence, Self Control, *Self Esteem

Identifiers—*Bulimia

Bulimia is an eating disorder prevalent among young women, characterized by binge eating episodes followed by purging with subsequent depressive moods and self-deprecating thoughts. To determine whether bulimic women exhibit a greater discrepancy between their perceived and ideal selves than do nonbulimics, three samples of women were assessed. The nonbulimic group of 53 women included 18 who reported occasional compulsive overeating but no purging. The third group consisted of 11 bulimics enmeshed in a pattern of disturbed eating behavior. An Eating Problems Questionnaire was administered to all participants,

and a personality test using a Q-sort methodology was administered to measure real-ideal self-discrepancy. Analyses of results showed the mean discrepancy score for nonbulimic women was 49.9. For those who claimed some compulsive eating behavior the mean was 61. For the bulimic group the mean was 106. The findings demonstrated an extraordinary discrepancy between how the bulimics sees herself and how she would like to be. Bulimics might be helped by being encouraged to develop less perfectionist conceptions of their ideal self. The resulting increase in their self-congruence might reduce their need to engage in a self-destructive binge/purge cycle. (JAC)

Custody Litigation: Interpreting Ideological Dis-

course.

Spons Agency—American Univ., Washington, D.C.

Pub Date—12 Oct 83

Note—38p.; Paper presented at the Annual Meeting of the National Council on Family Relations (St. Paul, MN, October 11-15, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Child Custody, *Court Litigation, *Divorce, Family Relationship, Parent Role, *Research Methodology, Social Science Research, *Sociocultural Patterns

Identifiers—*Ideology

Contested child custody cases between divorcing parents provide a context in which particular ideologies of the family are articulated, reproduced, and legitimized in legal practices. The relationship between legal and extralegal categories was examined in a review of 32 divorce cases, 13 from family court and 19 from circuit court. Data came from court records, and direct observation and interviews with participants. Analyses involved identifying categories and properties, and comparing them to develop an understanding of their interconnections. The interrelationship between legal categories and the norms and symbols about the family expressed in these cases revealed a code for conduct on the normative level and two competing ideologies of the family on the symbolic level. Derived from substantive and procedural law, the legal categories serve to structure and limit the discourse. The extra legal categories are the norms and symbols reflected in the discourse. The code for conduct consists of two sets of interconnecting norms, which identify how to be a fit parent and how to raise children. The symbolic dimension of the code was abstracted and two ideologies of the family emerged. The gender-based ideology reflects the natural order, gives primacy to love and its expression through specific acts, and identifies an ideal representation of the mother role as the primary one. The class-based ideology reflects the rational order and emphasizes parenthood as an instrumental role to be carried out with rationality and competence. The two overlapping ideologies presently co-exist, but class-based ideology appears to be moving to a more dominant position. (JAC)

Descriptors—*Altruism, *Coping, Helping Relationship, Interpersonal Relationship, Life Satisfaction, Middle Aged Adults, Models, *Need Gratification, *Older Adults, Predictor Variables, Prosocial Behavior, Self Esteem, Social Behavior, *Social Integration, *Well Being

Identifiers—*Helping Behavior

Research on helping behavior has focused on help to elderly individuals rather than help by elderly individuals. To investigate the determinants and consequences of helping by older adults, 117 adults, from five Detroit senior citizen residences, with a mean age of 75.6 (67 percent female) completed a personal/demographic questionnaire, including such items as health, finances, and environmental information; the Modified Self-Report Altruism Scale; the Coopersmith Self-Esteem Inventory; and

the Philadelphia Geriatric Morale Scale. An analysis of the results showed that older adults do engage in helping behavior and that providing help to others is often the source of considerable satisfaction. Antecedents of helping behavior were health, finances, age, education, occupation, and race, with blacks reporting more helpfulness than whites. Facets of the residential context related to helping were availability of opportunity to provide volunteer service, convenience, owning a car, similarity in ethnic backgrounds, and sense of safety and security. Helping behavior was significantly related to self-esteem and social integration. (Several figures depict the conceptual model of helping by the elderly upon which the study predictions were based.) Descriptors—Adults, Black Community, Black Family, *Blacks, Family Structure, Interpersonal Relationship, *Life Satisfaction, *Males, *Marital Status, *Socioeconomic Influences, Well Being

Research on black families in the United States consistently has neglected the black man. To investigate the relationship between marital status and life satisfaction among black men, 253 black adult men from a sociodemographically representative sample of central Florida were interviewed using the Cantril Self-Anchoring Striving Scale. Information on health, socioeconomic status (SES), age, and social participation was also gathered. An analysis of the results showed that married black men were significantly less satisfied than unmarried men, including separated ones. Men with higher SES and those who felt they were in better health were more satisfied than their lower SES and less healthy counterparts, but overall dissatisfaction remained present. When controlling the other variables, age was significantly and positively related to satisfaction, with younger adults being least satisfied. It may be that the problems resulting from discrimination have led black men to have low expectations for marriage; this, and other factors such as the educational and sex-ratio disparities between black men and women, may have long-lasting impact on the black family. Teaching Culture: The Effects on Attitude Change and Perceived Similarity.

Pub Date—Aug 83

Note—14p.; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Attitude Change, College Students, *Cultural Education, Higher Education, Latin American Culture, Second Language Instruction,

*Sex Differences, Spanish, *Teaching Methods

Few studies on teaching culture have empirically investigated the significance between the teaching methodology and the results. To investigate the influence of specificity of cultural information and mode of presentation on attitudes toward South Americans, 113 college students in introductory Spanish classes (21 male, 92 female) participated in two treatment conditions (cultural instruction/no cultural instruction) over a 6-week period. Under the treatment condition the last 10 minutes of each 50 minute class were devoted to cultural instruction presented through discussions. To assess attitude changes the subjects completed the Revised Bogardus Social Distance Scale (RBSDS) and the How North Americans Perceive South Americans questionnaire (HNAPSA). An analysis of the results showed that the teaching of cultural information about South Americans through discussions significantly increased the students' acceptance of closer social ties with people from South America. Females were more willing to accept a closer social relationship to South Americans than were males.

Subjects in the treatment condition also perceived more similarities between the cultures than those in the control group. Again, females were more affected by cultural information, with females in the treatment group perceiving more similarities than males. Females in the control group also perceived more differences between the cultures than control group males, which suggests that more research is needed on gender-related responses to cultural information. Descriptors—Females, Feminism, *Language Attitudes, *Language Usage, Opinion Papers, Perception, Political Attitudes, *Sex Bias, Sex Discrimination, Sex Role, Social Attitudes

Identifiers—*Peirce (Charles S)

Recognition of gender as a significant factor in the social parameters of language is a very recent phenomenon. The external aspects of language as they relate to sexism have social and political ramifications. Using Peirce's definition of sign, which encompasses the representation, the object, and its interpretation, sexually stereotypical language can be assessed. On the first iconic/metaphorical level, substituting "woman" (object) with various other terms, e.g., chick, girl, doll, fox (representation), characterizes woman as irresponsible, childish, small, useless, and deceitful. On the second level of indexical sign, the language patterns of females, which tend to avoid swearing and rough language, have also helped to foster women's societal position as secondary to men. Legislation in this area, which makes it a criminal offense to talk in a vulgar or obscene manner in the presence of women, actually furthers subjugation by equating women with children. Differences in male and female adjective selection, females' use of a question intonation in assertive utterances, modal constructions signaling doubtfulness or uncertainty are all examples of sex-related language patterns. Peirce's model allows us to be aware of relationships and underlying themes within such speech habits which, thus, cannot be easily dismissed as trivial. That "man" and "he" as symbolic signs fail to represent males and females equally, has been documented in several empirical studies. The prolific use of "man" in the generic sense has served to exclude women from professions, education, and government. If Peirce is right, the outcome of the feminist struggle to bring about language changes may determine their success in instituting changes in all areas. (BL)

Descriptors—Case Studies, *Cheating, *Counselor Training, Discipline, *Ethics, Graduate Students, Higher Education, *Moral Issues, Opinion Papers, Plagiarism, Professional Education, Psychology, *Student Teacher Relationship

Although cheating is reportedly endemic in colleges, the honor system is believed to have reduced its incidence. Cheating in a graduate, clinical psychology training program touches serious fundamental issues with academic, ethical, intrapersonal, interpersonal, and professional implications. The responsibility of the teacher is to respond reasonably and effectively to serve the students, the university community, and the public. A humanistic and responsible approach provides an atmosphere in which the students can make amends while learning about the therapeutic role and environment through their experience. In order to illustrate a psychotherapeutic approach to such a breach of ethics, this paper presents a case study in which two women graduate students were involved in cheating on a take home final examination in clinical psychology.

After two meetings with the professor, the woman who allowed her examination to be copied wrote a paper on professional ethics as her requirement for closing the breach. The woman who copied the examination studied limit setting as it applied to herself. Both women found the experience beneficial to their moral and professional development and may have gained something from their own experience toward understanding what psychotherapeutic acceptance is about. Descriptors—Biographies, Employees, Gerontology, Interaction, Opinion Papers, *Oral History, Work Experience

Identifiers—*Life Review

The process and content of the life review should not be separated from the creation of an oral history. Several projects, undertaken at the University of Louisville Oral History Center, support the therapeutic aspects of reminiscence. The dichotomy between oral history, as an historical database, and life review, as a therapeutic exercise, breaks down in actual practice. Each exercise contributes to the others' function. In the 31 oral histories taken at the Louisville Courier Journal and the 44 oral histories taken at the Louisville and Nashville Railroad, both individual and group life reviews were at work. The participants reviewed their own life cycles and the life cycle of their employing companies. In both oral history and life review, the process and product can be useful to historians and gerontologists. (BL)

Descriptors—*Coping, *Counseling Techniques, Counselor Role, *Emotional Response, Family (Sociological Unit), Family Life, Health, Individual Needs, Significant Others, *Suicide, Widowed

Suicide is the tenth leading cause of death in the United States, with 30,000 documented cases per year. It is the eighth leading cause of death in children and the third leading cause of death in adolescents. For every suicide a minimum of five family members or significant others are affected. These survivors go through a difficult period of postvention, when they work toward emotional and psychological recovery and readjustment. Suicide, with its taboo and stigma, often cuts off normal avenues of grief support. All survivors, from immediate family members to friends to professional associates, feel responsible for the loss. The death is particularly traumatic because there is no warning, no ability to plan, and little support from others who are themselves uncomfortable with the suicide. Guilt, hostility, rage, anger, social stigma, loss, emptiness, and a prolonged period of self-questioning must all be dealt with. Professionals can provide assistance in meeting survivors' needs through recognizing the need for services, becoming aware of the dimensions of the problem, becoming knowledgeable in suicidology and bereavement, becoming skilled in techniques of self-help and support groups, and by working in an interdisciplinary manner. tives, Behavior Standards, Diseases, Higher Education, *Humanistic Education, *Medical Education, *Medical Students, *Physician Patient Relationship, Stereotypes, *Student Attitudes

Medical school curricula are attempting to enhance positive attitudes toward a biopsychosocial model of illness and to correct prejudicial stereotypes toward various patient groups through affective education. To explore the evaluative attitudes of first and second year medical students in the areas of trends in predispositions toward different disease populations and patient characteristics, attitude change in the first year of medical school, and experience with certain disease categories, 323 New York University Medical School students provided demographic information, completed a Likert-type attitudinal scale measuring professional distance, and responded to a patient case description which was manipulated according to four variable: sex, age, prognosis, and diagnosis (cancer, heart disease, psychiatric disorder). An analysis of the results showed that students opted to maintain greater professional distance from males compared to females, poor prognosis compared to good prognosis patients, psychiatric patients compared to cancer patients, and cancer patients compared to heart disease patients. Student class year and previous experience with the disease significantly affected attitudes, with more experienced students showing more comfort and willingness to work with certain patients, particularly cancer patients. Since differential patient preferences were observed at the onset of medical school, early educational interventions may be needed to address the potential for negative attitudes. (BL)

Identifiers—*Wellness

Wellness and holistic health models, which focus on life style as a major component of long term health, are thriving throughout the United States. To evaluate the impact of an undergraduate psychology course dealing with health enhancement, wellness, and prevention issues, 24 college freshmen enrolled in one of two courses for a 10-week period: a psychology class focusing on wellness, stress awareness and management; and a philosophy class focusing on the self. Pre- and post-tests were administered to assess life style habits (Lifestyle Assessment Questionnaire), self-concept (Tennessee Self Concept Scale), and anxiety/stress (State-Trait Anxiety Inventory, Mood Adjective Checklist, and Somatic Complaint Checklist). The control subjects also completed the Relaxation Rating Scale Survey evaluating the stress awareness and management components of the course. An analysis of the results showed that little change occurred for either the treatment or control groups from pre- to post-testing. Factors which may account for the lack of gains were the short intervention period, the measures used, constraints on students' ability to change life style behavior given the university setting, and the nature of the undergraduate program. Data collected on the Relaxation Rating Scale Survey suggest the value of stress management training and the need to further explore and evaluate the impact of health promotion programs for students. (The Relaxation Rating Scale Survey is appended.) (BL)

Descriptors—*Academic Achievement, Biology, Cognitive Processes, Mathematics Achievement, *Research Methodology, *Research Problems, *Sex Differences, Socialization, Spatial Ability, State of the Art Reviews, Verbal Ability

Although sex differences in research have received considerable attention, few researchers have examined the bias, social context, and process of that research. In analyzing sex differences in academic achievement over the past 10 years, three areas (mathematics, spatial ability, and verbal ability) would appear to establish consistent sex differences. However, upon closer examination of spatial ability research, only one distinct area within the construct, mental rotations, shows sex difference. Other areas, such as horizontality/verticality, do not truly measure spatial ability and therefore should not confound the research and results. The hypotheses for sex differences stem from the nature/nurture or biological versus sociocultural explanations. Biological premises, specifically genes, hormones, brain structure and function, and timing of pubertal changes, have been used to support sex differences in spatial ability and mathematics. However, under closer scrutiny only hormones, and then only as they relate to the levels present in the body, have been correlated with sex differences in cognitive performance. Research on socialization suggests that parental expectations, school structure arrangements, and sex role socialization affect academic achievement. Most research on spatial ability suffers from the chicken and egg dilemma, since it cannot be determined which comes first: spatial skill or interest in spatial activities. Until more scientific rigor is required in studies of sex differences, the research being done will only reinforce stereotypic beliefs. (BL)

Descriptors—Adolescents, Conflict Resolution, Empathy, Family (Sociological Unit), *Family Attitudes, Family Involvement, *Family Relationship, Group Unity, Marital Satisfaction, *Parent Education, *Program Effectiveness, Secondary Education, Self Esteem

Identifiers—Self Esteem A Family Affair (Program)

Over the past decade parent education programs, following either a democratic or behavior modification model, have gained in recognition and support. To investigate the effectiveness of Jean Illsley Clarke's parent education program, Self Esteem: A Family Affair, on self-esteem, conflict resolution, and family togetherness and flexibility, 27 intact families with a minimum of one adolescent child were assigned to either a control or treatment condition. In the treatment condition, the families attended eight, 2-hour class sessions in which Clarke's education program was implemented. The Family Adaptability and Cohesion Evaluation Scales (FACES II), the Inventory of Parent Adolescent Conflict, and the Tennessee Self Concept Scale were administered to all families as pre- and post-tests. An analysis of the results showed that the course was effective in producing significant changes in family members' perceptions. Fathers perceived the family system as more adaptable and were more satisfied with family cohesion. Average family empathy was increased, and mothers perceived less dissonance with fathers, increased empathy with fathers, and less total dissonance. Adolescents in the experimental group compared to those in the control group perceived less dissonance with their fathers. (BL)

Descriptors—*Adolescent Development, Adolescents, Case Studies, *Developmental Tasks, Emotional Problems, *Mother Attitudes, *Parent Child Relationship, *Parent Influence, *Parent Role, Personality, Secondary Education

Identifiers—*Individuation

The task of dissolving infantile dependency ties to the mother and family during adolescence has been frequently cited as a major developmental task of adolescence. The role of the mother in the resolution of the rapprochement crisis as it continues into adolescence was illustrated through a case analysis of a 14-year-old boy and his mother. The symptoms of the adolescent included anxiety, poor school performance, and drug abuse. The mother sought treatment for intense anxiety and overwhelming dread when contemplating her future and that of her son. The child's crisis and his mother's were connected and occurred sequentially. His anxiety revived her earlier unresolved feelings of abandonment, and she was unable to support his individuation. He turned to drugs as a substitute for his mother as well as for protection against his yearnings for her and her intrusion. The process of reworking separation and individuation in adolescence must be understood in the context of the parent child relationship. (JAC)

Identifiers—University of Massachusetts

This program description, written for psychology curriculum developers and faculty, addresses the design, problems, and benefits of incorporating a respecialization course of study into the existing psychology clinical training program at the University of Massachusetts. An example of the individualized curriculum designed to meet the clinical and theoretical program requirements over a 2-year, part-time period, is presented. Financial issues are presented next, both in regard to tuition costs and methods for returning the tuition monies directly to the program. A description of the program's applicants follows, with a rationale for selection criteria. The paper concludes with a review of the benefits and problems that respecialization has presented to both the clinical program and the respecialization student, e.g., enrichment, competition for limited resources, financial costs, and professional identity. Identifiers—University of Massachusetts Amherst

This paper describes a 2-year practicum in pediatric psychology at the Bay State Medical Center, as administered by the Psychology Department of the University of Massachusetts. An overview of the pediatric psychology program and its collaborative design between clinical and developmental psychology is given. The learning objectives, and the academic and clinical components of the program are outlined, all of which include joint coursework between psychologists and pediatric residents and case conferences with pediatric residents. Clinical casework further includes assessment and short-

term treatment of children with combined medical, developmental, and psychological problems. Two case studies are presented to illustrate the interdisciplinary nature of the program. Evaluation of the program's success is explored in the areas of benefits to the students, process, costs, and research efforts. Program areas needing improvement are addressed. The paper concludes with a list of collaborative research studies which were initiated in the first 2 years of the program. (BL)

Descriptors—Adults, *Competence, *Counseling Services, *Counselor Characteristics, Counselor Client Relationship, *Counselor Evaluation, *Counselor Qualifications, Paraprofessional Personnel, *Participant Satisfaction, Professional Personnel

Researchers have found differences in client perceptions of and judgments about experienced and inexperienced counselors. To investigate the correlates of client satisfaction in two counseling centers, one staffed primarily by trainees (CC-T) and one staffed primarily by professionals (CC-P), 464 questionnaires (107 or 26 percent at CC-T; 357 or 39 percent at CC-P) were completed by clients who used the centers' services during 1980-81. The questionnaire focused on counseling goals, counselor-client relationship, and reactions to the center and services. An analysis of the results showed that at the CC-P, clients were satisfied with all aspects of the services as opposed to CC-T clients who were less satisfied, particularly with the center itself. Satisfaction was strongly related to helpfulness, personal characteristics of the counselor (warmth, action orientation, understanding, and competence) and disposition to return to counseling. At the CC-T, overall satisfaction was more closely related to perceived counselor competence. Favorable disposition toward returning to the counseling center was higher for clients at the CC-P. (The questionnaire and table of correlations are appended.) (BL)

Descriptors—*Communication Skills, Family Relationship, *Interpersonal Communication, Interpersonal Competence, *Models, Program Descriptions, *Skill Development, *Training

The traditional model of communication (sender-message-channel-receiver, SMCR) treats communication as a product rather than a process of interrelated elements of interaction. The SMCR model identifies communication skills, attitudes, knowledge, and sociocultural positions as important factors affecting interactions. According to this model, the channel for transmission of messages is any of the five senses. By contrast, the Human Communication Model (HCM) uses a principles and skills approach to help individuals understand how they can influence their own lives and relationships while interacting with others. The HCM defines communication as the creation of meaning within a perceiver in response to internal and external stimuli, and the transmission of signals to others which represent personal meanings. The HCM assumes each individual is the center of his/her world, communication is an organizational function, human motivation is self-actualizing, and principles and skill influence the flow of stimuli within and between people. The second part of this paper describes a 10-week couples enrichment program in which the HCM model was implemented to help them understand communication processes

through: (1) discussion of major themes of communication, e.g., creating meaning, principles, process, superverbal communication, listening, understanding, speaking, relationships, and total encounter; and (2) skill development exercises, e.g., getting acquainted, sharing, creating meaning, dimensions of being, relationships, professional communication, and closure. Each of the discussion themes and skill exercises is described separately. Detailed diagrams of the two communication models are also provided. (BL)

Descriptors—Counseling Techniques, Counselor Characteristics, Divorce, Helping Relationship, *Lawyers, Leaders, Marital Instability, Marriage Counseling, *Professional Personnel, *Professional Services

Identifiers—*Helping Behavior, *Mental Health Workers

Although few people bring their psychological problems to mental health professionals, research in the area of "natural" help is rudimentary. To investigate the process and effectiveness of natural professional groups in helping individuals experiencing marital disruption, 42 helpers (14 mental health professionals, 14 divorce lawyers, and 14 leaders of self-help groups) participated in a 40-minute interaction with a woman trained to portray a separated woman considering divorce. Audiotapes of the interactions were coded for helper behaviors according to the Counselor Verbal Response Category System. An analysis of the results showed that mental health professionals used more Minimal Encouragers, Open Questions, and Reflections than both other groups, and more Restatements, Interpretations, and Confrontations than lawyers. Self-help leaders used more Self-Disclosures than both other groups, more information than professionals, and more Open Questions, Reflections, Interpretations, and Confrontation than lawyers. Lawyers used more Verbosity and Information than both other groups and more Closed Questions than self-help leaders. Lawyers were more effective with legal/financial problems and less effective with personal/emotional problems than both other groups. While the findings can be useful for helpers in various groups to improve their effectiveness, further research on the effects of different behaviors is needed. (Author/BL)

Descriptors—*Acoustical Environment, Behavior, Evaluative Thinking, Information Seeking, *Motion, Perception, Perspective Taking, *Social Cognition, State of the Art Reviews, *Stimulation Identifiers—Phenomenological Analysis, *Social Perception

The organization of behavioral episodes can be described at two levels: the physical level of movement and sound and the phenomenal level of action. Social perception theory and research generally operates at a phenomenal level of behavioral description. Movement and sound traditionally have been considered inadequately structured to provide much specific information to social perception. As a result of neglecting the relationship between the two descriptive levels of behavioral stimulation, social perception theory and research, until recently, have neglected the fundamental issue of behavior perception. In contrast, other research literatures have focused on structure in movement and sound and have identified invariant patterns that specify a variety of human characteristics and activities and that relate to the perception of causality and purposive behavior in certain interaction episodes. Here,

the various findings are integrated into a discussion of the relationship between phenomenal units and structure describable at a physical level. An expanded conception of dynamic stimulation is proposed in which the contribution of interpretation and inference is balanced against the information available in movement and sound. (Author)

Descriptors—Affective Behavior, *Attribution Theory, *Cognitive Processes, College Students, *Depression (Psychology), Helplessness, Higher Education, Negative Attitudes, Problem Solving, *Self Esteem, *Self Evaluation (Individuals)

Both cognitive and learned helplessness models of depression stress the importance of low self-esteem in the etiology of depression and depressive symptomatology. To investigate the correlations and causal relationship of low self-esteem to depressive cognition, equal groups of low, medium, and high self-esteem college students ($N=135$; 89 female, 46 male) as determined by the revised Janis-Field Feelings of Inadequacy Scale, participated in an experimental self-esteem manipulation in which subjects were given either positive, average, or negative self-esteem feedback on their performance on a bogus social skills test. Subjects completed a battery of measures assessing depressive cognition, self-esteem, and depression level before and after the self-esteem manipulation. An analysis of the results showed that low self-esteem was associated with more depressed-distorted cognition, more depressed, automatic thoughts, and greater depressive affect than was medium or high self-esteem. Tests to determine whether or not low self-esteem was causally related to the development or generality of such cognitions were nonsignificant. The findings only partially support the rationale for therapeutic practices based on a pseudo-causal sequence in which mental activity automatically results in changes of mood or behavior. (BL)

Educational seduction, in which a charismatic, entertaining instructor obtains favorable student ratings while presenting insufficient lecture content, threatens the validity of student ratings and teaching effectiveness research. To examine the effects of one educational seduction variable, instructor expressiveness, on student achievement attributions and affective reactions, four studies (2 in 1980-81; 2 in 1981-82) were conducted, in which 532, 229, 220, and 165 male and female college students viewed two 25-minute videotaped lectures, manipulated for high or low instructor expressiveness. Subsequently, the students took an achievement test on the material and completed two profiles assessing attributions, achievement responsibility, and emotional response. An analysis of the results showed that instructor expressiveness had a consistent and moderate to large effect on student achievement across all four studies. The high expressive instructor produced a greater internal mastery orientation in students and enhanced students' confidence in their performance. The findings raise important questions about whether expressiveness affects other cognitive processes such as expectations or

motivation. (BL)

Locational versus Featural Information in Adult Visual Memory.

Pub Date—Aug 83

Note—28p; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).
Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Age Differences, Aging (Individuals), *Cognitive Processes, Eidetic Imagery, Females, Maps, *Memory, Middle Aged Adults, Older Adults, *Spatial Ability, *Visual Discrimination, Visual Learning, Young Adults

Research on adult memory for nonverbal representations has found a significant age-related decrement in performance. To investigate age differences in adult locational versus featural information in visual memory, 90 adult women (29 young women with a mean age of 21; 30 middle aged women with a mean age of 43; and 31 older women with a mean age of 68.7) studied three stimulus maps for landmarks, location recognition, and landmark-location pairing over three trial blocks; they then completed cumulative retention tests following learning of each stimulus map. After the map exercise, subjects completed a questionnaire covering learning strategy use and demographic information. An analysis of the results showed that the young and the middle aged subjects did not differ significantly in performance. Both younger groups recognized significantly more landmarks and locations, and paired significantly more landmarks and locations than did the elderly subjects. Subjects generally recognized similar numbers of landmarks and locations, although the young subjects recognized significantly more landmarks than locations from the third stimulus map, apparently stemming from practice in using a verbal labelling learning strategy. Relative levels of performance on the two recognition tasks and the pairing task indicated that recognition of featural and locational information were generally tasks of comparable difficulty, and that both were less difficult than the task of integrating featural and locational information. The findings of age group differences in performance may indicate an age related decrement in visual memory ability, but may also reflect age group differences in response to specific features of the experimental task. Change and Diversity in Grandparenting Experience.

Pub Date—Aug 83

Note—25p; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Change, *Developmental Stages, *Grandchildren, *Grandparents, Interpersonal Relationship, Life Satisfaction, *Sex Differences, Sex Role, Socialization, Stress Variables, *Time Perspective

In this study, change over time in grandparenting experience, sex differences in grandparenting, and differences among relationships with different grandchildren were explored. Thirteen grandmothers and six grandfathers were interviewed; content analysis and thematic analysis of interview transcripts were performed. Grandparents described changes over time in activities with grandchildren, and in the satisfactions and stresses of grandparenting; in accounting for these changes, grandparents most often referred to age-related changes in grandchildren. Men and women differed in activities shared with grandchildren, in sources of satisfaction and stress in grandparenting, in the personal significance of grandparenting, and in changes over time in grandparenting experience. Finally, many grandparents behaved differently with grandsons and granddaughters, although most of these grandparents believed that boys and girls should be treated the same way. We conclude that grandparenting is most usefully viewed as a developmental process, that grandparents act as sex role socialization agents, and that the findings support a model of reciprocal structuring of the life cycle. Descriptors—*Attribution Theory, College Students, Drinking, Evaluation Criteria, Higher Education, *Responsibility, *Traffic Accidents
Identifiers—*Blame, Speeding

Considerable research has been directed at examining motivational bias in the attribution of responsibility for accidents. To assess the influence of unsafe actions on the attribution of responsibility for traffic accidents of varying severity, 96 college students read scenarios in which the level of unsafe driving behavior (none, drinking, drinking and speeding) and the severity of accident outcome were experimentally varied. Subjects were asked to evaluate the degree of responsibility of the perpetrator, the importance of chance, and other possible causes. The results indicated that both increasing levels of unsafe act and severity of outcome were associated with increased attribution of responsibility. Severity-dependent attribution of responsibility was apparent even in the absence of obvious unsafe acts by the perpetrator. The commission of unsafe acts produced a tendency in the observers to attribute greater responsibility to the actions and characteristics of the perpetrator rather than to chance or situational factors. A denial of personal similarity with the perpetrator was also found under such circumstances. (Author/JAC)

Descriptors—*Academic Achievement, *Attendance, Attribution Theory, *College Students, *Depression (Psychology), Educational Environment, Higher Education, Locus of Control, Performance Factors, *Stress Variables, Student Characteristics

The relationship between classroom absenteeism and academic performance has been well documented. To assess the relationship between absenteeism and traditional stress risk/buffer factors, depressogenic attributional style, depression and academic performance, 68 students completed the Internal-External Control Scale, two versions of life event changes scales, a student version of the Jenkins Type A Behavior Scale, the Beck Depression Inventory, and an attributional questionnaire. Absenteeism was assessed by the number of times a student was not present to turn in assignments or tests. Academic performance was determined by mid-term and final examination scores. The previously reported negative relationship between classroom absenteeism and academic performance was confirmed, although none of the stress or depressogenic factors were significantly related to absenteeism. The findings suggest that absenteeism as a reflection of stress-related issues poses problems and solutions very different from those present when absence behavior is part of a rational coping strategy or due to low interest. Cognitive Restructuring, Etiology, Individual Differences, Longitudinal Studies, Parent Influence, *Personality Traits, *Predictor Variables, Secondary Education, *Smoking, *Social Cognition, *Social Environment, Social Psychology

Research in the area of social cognition has suggested that actual stimuli don't predict later judgments and responses as well as cognitive representations of and cognitive responses to those stimuli, in the form of attitudes, impressions, or causal attributions. To identify the factors most important in predicting adolescent smoking, a 4-year longitudinal study was conducted using a sample of students in grades 6 through 12. Three major categories of factors were used: (1) proximal variables (attitudes, beliefs, intentions) from Ajzen and Fishbein's (1970) model of behavior prediction; (2) general personality and perceived environment factors from Jessor and Jessor's (1977) problem behavior theory; and (3) perceived smoking environment factors. These factors were assessed across sex, age, and stage of smoking. The results supported the utility of a cognitive social-psychological approach to understanding adolescent smoking behavior. For adolescents who had already experimented with cigarettes, increases to regular smoking were best predicted by attitudes and beliefs about smoking as well as behavioral intentions to smoke (i.e., the Ajzen and Fishbein variables). Those who tried smoking but did not become regular smokers placed higher values on independence and had higher expectations for actually attaining independence, which may have helped reduce peer influence. In contrast, initial experience with smoking was more dependent on the immediate situational context. Moreover, adolescents grossly overestimated the actual extent of smoking among adults and teenagers. Self-image and social image were also related to adolescents' smoking decisions. The findings should prove useful in designing more effective interventions for primary prevention of smoking among adolescents. (JAC)

Training Teachers to Identify and Intervene with Abused Children.

Spons Agency—Emory Univ., Atlanta, Ga.

Pub Date—Aug 83

Note—22p; Paper presented at the Annual Convention of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Attitude Change, *Child Abuse, Elementary Secondary Education, *Identification, *Inservice Teacher Education, Intervention, Research Reports, Teacher Improvement, *Teacher Role, Teachers, Teacher Workshops

Teachers are a potentially helpful resource for abused children, but generally lack training in child abuse identification and intervention. Elementary and junior high school teachers (N=104) were surveyed concerning their abuse-related experience, knowledge and attitudes. Sixty-eight percent of the teachers reported 3 or fewer hours of education about child abuse, and 62 percent reported no prior experience with abuse cases. Half of the teachers (N=51) were then randomly assigned to participate in a one-day training workshop on child abuse. Repeated measures analyses revealed that treatment teachers, compared to control teachers, increased in knowledge about child abuse and developed more sympathetic attitudes toward the abusive parent. A 6-month follow-up using self-report data revealed no significant differences between groups in the number of cases of child abuse identified or reported. However, treatment teachers were significantly: (1) more likely to talk with individual students to determine if abuse was occurring; (2) more likely to give a class presentation on child abuse; (3) less likely to report the use of physical punishment in the classroom; and (4) more likely to discuss child abuse with colleagues. Interestingly, the only reported and/or suspected cases of sexual abuse came from the treatment group. (Author)

Psychophysical Scaling of Attachment and Loss.

Pub Date—Apr 83

Note—15p; Paper presented at the Annual Meeting of the Western Psychological Association (63rd, San Francisco, CA, April 6-10, 1983).

Pub Type—Reports - Research (143) — Speeches/

Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Affective Behavior, *Attachment Behavior, College Students, Coping, Emotional Experience, *Emotional Response, Evaluative Thinking, Higher Education, *Interpersonal Relationship, Psychophysiology, *Scaling, *Stress Variables

Identifiers—*Loss, Magnitude Estimations

Few studies have attempted to measure the strength of attachment in personal relationships or the stress associated with the loss of those relationships. To measure the perceived strength of attachment and stress of loss of 20 typical relationships (e.g., wife or husband, father, son, daughter, brother, sister, friend, lover, grandparents, and casual acquaintance) and to determine how these scales correlate with the actual experience of relationship loss, 469 college students assigned numbers to relationships in proportion to their perceived magnitude of attachment or stress following a loss, in comparison to a standard modulus. In addition to making magnitude estimations, 117 subjects made magnitude judgments using a hand dynamometer. Subsequently, 352 college students from the original sample rated, on a 7-point scale, the degree to which they had experienced each of 26 emotional reactions (e.g., lonely, angry, depressed) and made each of 20 coping responses (confided in friends, formed new attachments, started to drink) to the loss of a relationship. An analysis of the results showed that subjects were able to provide consistent and reliable judgments of the strength of their attachments in these relationships, and of the stress associated with the loss of those relationships. The cross-modality matching validation was confirmed for both strength of attachment and stress of loss, indicating that subjects assigned the same magnitudes to the 20 relationships when they used numbers and when they used apparent force of handgrip. A high correlation was obtained between the stress of loss scale and the average ratings of emotional reactions and coping responses to loss. (Author/BL)

How to Flunk Out: A Paradoxical Approach to Study Skills.

Georgia Univ., Athens. Center for Counseling & Testing.

Pub Date—[82]

Note—48p.

Pub Type—Guides - Classroom - Learner (051)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Educational Strategies, Guidelines, Higher Education, *Humor, Instructional Materials, *Motivation Techniques, Notetaking, *Student Motivation, *Study Skills, Teaching Methods, Test Wiseness, Time Management

Identifiers—*Paradoxical Techniques, PF Project
Student handouts which are written "tongue-in-cheek" tell the student to do exactly the opposite of what should be done to improve study skills. Reasons given for using a paradoxical teaching approach are to create an element of surprise, to increase attention, to encourage identification with what is being taught, to increase awareness of choice, and to entertain. "Serious" handouts are provided to accompany the "tongue-in-cheek" materials. Topics covered in the handouts include getting along with the professor, taking good lecture notes, creating a good study environment, motivating oneself for study, managing one's time wisely, reading textbooks effectively, and using effective test-taking techniques. Hints for taking essay tests and objective tests are provided. The College Student Self-Rating Scale of Excellence which lists 35 characteristics of an excellent student is also included. (JW)

Identifiers—PF Project, Television Role, Youth Career Development Program

Originally intended to be used with a national television drama mini-series, the guidebook can be used alone to improve student attitudes toward education and career-oriented skills. It is targeted primarily to Black and Chicano junior and senior high school students. The project stresses that the development of oneself is most important to the development of a career. The guidebook can be copied and reassembled to accommodate specific program needs. In section 1, a summary is given of each television program, followed by discussion questions, suggested activities, problem situations, and a thought for the day. Section 2 provides worksheets to help students rate things of importance in their lives, examine the meaning of success, learn about the world of work, improve problem-solving skills, give an oral history, consider role models and mentors, and identify career goals, skills, and talents. The third section explains how the guidebook can be used for learning/work experience programs; business/community partnerships; school classrooms; summer youth, recreation, and camp programs; short, job-search workshops; and counseling workshops. In addition, the document provides a model for learning, a discussion of the role of television, additional skill building activities, and an annotated list of resources and model projects. (LH)

Identifiers—PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: Truancy sweeps, a cooperative effort of the high school district, Santa Maria Police Department, and Santa Barbara Sheriff's Department, gave us a valuable insight. The sweeps, unannounced to the public but coordinated by high school assistant principals and law enforcement agencies, were part of a concentrated effort to improve attendance. To our surprise, we found that the students who were picked up on these sweeps were not habitual trouble-makers or truants! Once we identified our students and found out why they were not in school that day, we discovered situations which could be alleviated through school or public service agency attention for several truant students.

There are 3,600 students attending our two major high schools. On the first sweep, conducted in October with both law enforcement agencies participating, 29 students were picked up and detained. The next sweep, in December, netted only 18 students. The word was out on the campus. According to one student, "When that jail door clanged shut, I KNEW I didn't want to be there." On the day of a sweep, assistant principals from each school are "on duty" at law enforcement agencies. Students are identified; their parents are telephoned and told to come and get their sons or daughters and return them to school. Granted, this is traumatic for both students and their parents. However, it IS working, as the last sweep brought in less than 10 students. Fred Miller, Santa Maria High School Assistant Principal, who works with discipline and attendance problems and participates in the sweep action, says: "There is no single program which keeps students in school." Truancy sweeps, along with parent contact, responsibility shared according to district policy and the student behavior code, and communication about all of these efforts, is paying off in improved attendance, better discipline, and a community which knows what's going on in its schools. A cooperative community-school district counseling program to reduce truancy and juvenile delinquency in Inglewood, California is described. Material, in the form of official memos, is divided into four sections. Section 1 describes project funding and target students. Section 2 contains statistics related to the numbers of students served, put on probation, and put on suspension. Section 3 outlines the project's mode of operation, procedures for suspended students, activities and counseling offered at the truancy counseling center, and procedures for truant students. The final section outlines relevant state and local laws and ordinances. Also included are a copy of a student record form, notification of truancy letter to parents, and a conference form. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community. This curriculum guide provides instruction in assertive skills, personality types, and relaxation techniques for sixth-, seventh-, and eighth-grade students. It is especially intended to increase the social skills of shy, withdrawn students; but it may be used with any students who demonstrate deficits in social skills. The guide contains 50 lessons which: (1) teach students how to deal with others in a successful, productive manner; (2) provide them with an awareness of personal differences; and (3) give them tools to reduce personal stress. Each lesson includes: title, goal, lesson overview, materials, procedure, transfer activity, behavioral objectives, and follow-up. The guide may be used in the classroom, in advisement groups, and/or in small-group counseling sessions. The lessons offer many experiential activities and role-playing situations. A glossary of terms used in the guide and a six-item bibliography of references are included. (DC)

ship, Primary Education, Program Implementation, Remarriage, Resource Materials, Units of Study

Identifiers—PF Project

This elementary school curriculum guide is intended to develop an understanding of the emotions involved in stressful changes in life and to teach coping skills for dealing with those changes. The focus is on changes caused by divorce, remarriage, or death of a parent. The first 38 lessons are designed for the classroom. The remaining 15 are designed for small counseling groups. Most of the classroom lessons are presented twice, once for primary students and again for intermediate students. They are organized into the following seven units based on different stages of the coping process: introduction, denial, anger, bargaining, depression, acceptance, and hope. These stages are also the subjects of the counseling group lessons. The lessons are presented with a theatrical theme and include the following components: stage (lesson title), scene (lesson objective), focus (behavioral objective), props (materials needed), script (teacher information and instructions), action (activity), finale (closure activity), encore (transfer activity), and epilogue (optional activity). Many experiential, role-playing, and imagery exercises are used. Also included in this document are a school implementation guide which provides guidelines for implementing the STAGES program, a media resource list which cites filmstrips, fiction and nonfiction books, and a seven-item reference bibliography. Identifiers—PF Project

This curriculum guide is designed to lower the dropout rate and improve the academic achievement of handicapped and nonhandicapped high school students by developing their personal and social skills. It may be used in a variety of classroom, special education, and guidance settings. The lessons use relevant experiences to stimulate learning through active participation and experiential activities such as plays, short stories, role-playing scripts, and stress management exercises. The lessons are organized into three components: social skills, problem solving, and stress management. The social skills component contains 26 lessons on passive, assertive, and aggressive behavior; assertive communication; social conversation; and dealing with criticism assertively. The problem-solving component presents 27 lessons on agreements; feelings; beliefs and their effects on emotions; and a six-step, problem-solving method. The stress management component includes 29 lessons which develop a variety of stress reduction techniques and provide reinforcement for the social skills and problem-solving lessons. The components may be taught separately, sequentially, or simultaneously; many of the social skills and problem-solving lessons are keyed to the stress management lessons. Each lesson includes: lesson objective, behavioral objective, materials, activity, closure, and transfer. An 18-item reference bibliography is included. (DC)

Practical advice for creating effective resumes, cover letters, and thank-you letters is provided in this guide for college students. Ten general characteristics of a good resume are enumerated and followed by a lengthy list of strong, action verbs to use when writing the resume. Guidelines for developing the following eight specific parts of a resume are given: job objective, education, employment experience, extracurricular activities, awards and honors, interests, and references. Seven cardinal rules of resume preparation are discussed and two pages of additional advice are given. Nine sample resumes provide an idea of what good resumes should be like. A six-page resume worksheet is included to aid in recalling and organizing the data. Guidelines and rules for writing cover letters (for resumes) and thank-you letters (as follow-up after job interviews) are provided along with examples of the following: a poor cover letter, a good cover letter, a letter requesting a job interview when a specific job is not advertised, and a thank-you letter. Identifiers—*New Zealand

Noting that the degree to which the concept of ethnicity is understood and taken into account at all levels of educational planning is the single most important factor in the success of programs designed for the education of ethnic and socioeconomic minorities, this paper discusses the concept in general, then outlines the components of an in-school program that was intended to meet the needs of students ethnically divergent from the mainstream of a society. The paper begins with a discussion of ethnic diversity within a nation or society, then addresses what a nation or society can do with that diversity. It next offers several approaches that teachers of language and literacy can use in dealing with ethnic diversity, noting that the attitudes these approaches represent range from ideals of uniformity to those of diversity. Following a discussion of the individual

and ethnicity, the paper presents a review of one school's efforts to develop a publication program to deal with its various ethnic groups. It examines the educational principles upon which the program was based, sets forth the essential ingredients of the publication program, describes the three types of publications prepared, and presents some of the problems the program encountered. Descriptors—*Adult Literacy, *Blacks, *Cooperation, Educational Improvement, Education Work Relationship, Foreign Countries, Government Role, Job Skills, *Literacy Education, *Organizations (Groups), *Program Development, School Business Relationship

Identifiers—Apartheid, *South Africa
According to a 1980 estimate, 5,678,000 black South African adults are illiterate. A large number of organizations has been created to address the problem—among them such private sector operations as the South African Committee for Higher Education, Operation TEACH (Teach Every African Child), the Bureau of Literacy and Literature, the Urban Foundation, and the government's Department of Education and Training—but their failure to coordinate activities has hampered the promotion of adult literacy. Obstacles to greater coordination include a lack of consensus on the criteria for literacy, disagreement over whether efforts should be concentrated on preventing or curing adult literacy, varied methods of teaching reading, limited government commitment to adult literacy programs, limited funding, and restricted opportunities for black workers even with good literacy skills. Reasons for optimism over improved coordination in the future, however, involve an increased flow of capital into the study of black literacy, signs of increased state involvement in literacy education, the establishment of a black university in a major urban area, and some relaxation of legal requirements for black admission to universities. Descriptors—Classroom Research, Decision Making, Educational Theories, *Instructional Improvement, *Models, *Reading Instruction, *Reading Research, *Research Methodology, Teacher Characteristics, *Teacher Effectiveness, Teaching Methods

Through an integration of teacher effectiveness and reading research, this paper proposes ways for improving classroom reading instruction. The first part of the paper reviews teacher effectiveness research, noting the shifts that have occurred in that area from the early efforts, which focused on identifying and describing teacher characteristics associated with high or low student outcomes, to more recent efforts that have looked at teachers' goals, judgments, and decision making processes. The second section discusses the idea of "bounded rationality," which posits that because they work in a complex environment and must make decisions immediately, teachers have to construct a simplified model of a real situation and behave according to that model. The third section looks at research relative to teacher thought, judgment, and decision making, concentrating on the cognitive model proposed by R. Shavelson and P. Stern. The fourth section considers research covering decision making during reading instruction, specifically in the areas of teacher planning, classroom practice, and teacher concepts of reading. The final section describes the Concerns-Based Adoption Model developed at the University of Texas and built on assumptions about school characteristics, adults as learners, and the change process—and discusses the implications of this model for classroom instruction.

Descriptors—Grade 9, Grade 10, High Schools, Learning Activities, Lesson Plans, Literary Devices, *Literature Appreciation, *Poetry, Symbols (Literary), Units of Study
Identifiers—PF Project

This four-week poetry unit, geared to ninth and tenth graders, contains plans for 20 days of lessons and activities designed to capture the students' interest and expose them to a wide variety of poems. The characteristics of poetry and the techniques used by poets are emphasized in the unit. Six general objectives are listed followed by an overview of the unit with suggestions and directions to the teacher. Organization of the lessons includes topic, objectives, materials needed, and procedures for teaching. Included in the first twelve lessons are poems about sports, black poetry, story poems, symbolism in poetry, poetry on tombstones, concrete poetry, haiku, and the poetry of rock music. Three "browsing" days are provided for the students to explore poetry books and find a favorite poem to present to the class. Four days of "poetry seminars" are planned for the presentations. A four-page written test is provided for the last day. References are listed for books, films, and filmstrips used in the unit. Included in the appendices are a vocabulary list to be completed by students as they proceed through the lessons, some examples of concrete and haiku poetry, and student guidelines for preparing the poetry presentations. This document is part of a collection of materials from the Iowa Area Education Agency 7 Teacher Center project. (JW)

Thacher, Jean Louise N., Comp.
An Annotated Partial Bibliography of Contemporary Middle Eastern and North African Poets, Novelists, Dramatists and Short Story Writers with Some Background Titles and Folk Tales.

Pub Date—[1 Feb 84]
Note—43p.
Pub Type—Reference Materials - Bibliographies (131)

EDRS Price - MF01/PC02 Plus Postage.
Descriptors—African Culture, African Literature, Annotated Bibliographies, Anthologies, Cultural Background, *Drama, Folk Culture, Islamic Culture, Literary Genres, *Literature, *Novels, *Poetry, Resources, *Short Stories
Identifiers—*Africa (North), *Middle East, PF Project

Titles of 152 books of Middle Eastern and North African literature are listed in this annotated bibliography. Contents of the bibliography include: (1) 3 anthologies; (2) 24 collections of poetry; (3) 31 contemporary novels; (4) 23 collections of contemporary short stories; (5) 3 collections of plays and 3 single plays; (6) 10 collections of folktales and 6 single folktales; and (7) titles of 49 books which provide background material and information on the Middle East and North Africa. Approximately two-thirds of the entries were published between 1970 and 1983. All books listed are in print unless otherwise noted in the annotations. For each citation, information on author, publisher, publication date, number of pages, and price is provided along with a brief annotation. A list of names and addresses of the publishers of the titles is provided. The final page of this document lists a few selections from the literature of the bibliography in the categories of poetry, novels, plays, and short stories. (JW)

More effective reading, writing, and communication courseware can be promoted through clearer guidelines in courseware development, stronger incentives for courseware developers, and greater motivation for teachers to seek out and use the courseware. In reading and writing, software guidelines must reflect traditional instructional objectives or functional domains—needed information processing skills, and courseware implications. Incentives for developers include assurance of a large and stable educational market and more effective measures to control software piracy. Teacher resistance, a major obstacle to the successful implementation of computer assisted instruction, can be countered through improved teacher training, inclusion of positive teacher roles in the lessons, user friendly materials, and the establishment of courseware evaluation standards. Recommendations for software developers, schools, and state and federal policy makers include creating computer literacy standards in preservice teacher education; establishing local teams of teachers, programmers, publishers, and researchers to generate high quality courseware; and promoting strong school positions against software piracy. The product of a comprehensive project aimed at identifying reading, writing, and communication courseware needs, this report first discusses the benefits of computer assisted instruction and obstacles to its implementation in the communications area. It then describes procedures used to gather information and presents a detailed review of the study's results. The report suggests that progress in reading, writing, and communication courseware will be facilitated by clearer guidelines for the design of good courseware, increased incentives for software development, and stronger motivations for teachers to seek out and use the courseware. After discussing these three points, the report makes recommendations concerning the roles of the federal and state governments, the local community, and business and industry in supporting research and development of high quality courseware, in ensuring that teachers can use these materials effectively, and in developing adequate standards for evaluating computer software. Its appendices include a partial list of study participants, a classification of courseware according to the language skills area, a school microevaluation form, and sample evaluation questions. Mikulecky, Larry
Developing Job Literacy Training Programs for Business and Industry: A Case Study of Literacy Training to Prepare CETA Eligible Workers as Competitive Word-Processor Operators.
Pub Date—1 Dec 83

Note—13p; Paper presented at the Annual Meeting of the National Reading Conference (33rd, Austin, TX, November 29-December 3, 1983).

Pub Type—Reports - Descriptive (141) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Business Correspondence, Business Education, Business Skills, Education Work Relationship, *Job Skills, *Job Training, *Literacy, Program Descriptions, *Program Effectiveness, Training Methods, Vocational Education, *Word Processing

Identifiers—Comprehensive Employment and Training Act, *Job Literacy

A Chicago area private consulting firm worked in cooperation with the Comprehensive Employment and Training Act (CETA) program to train applicants in word processing operations. Careful task analyses of on-the-job word processing were used to develop a curriculum based on realistic goals and expectations. Small groups of CETA eligible applicants received information on word processing careers and on the training program, as well as some "hands on" experience with the equipment and the kind of work that would be required. Interested applicants were then screened through a series of comprehension and literacy tests. One hundred trainees were selected to enter the program in three groups—approximately 70% female, 30% male, 80% black, and all between the ages of 22 and 44. Trainees were paid to attend 40 hours of training per week in language skills, typing and word processing, work habits, and individual study time. Specialists in word processing, reading, and business planned assignments integrating language and machine skills, and provided classwork simulating actual job demands. The average time needed for the trainees to reach the preset standard was 20 weeks, with a few requiring only 14 weeks and a few as many as 28. The principles behind the success of this program include (1) application level reading and problem solving tasks, (2) materials and performance criteria reflecting real world expectations, (3) maximum student time-on-task, and (4) screening applicants to select those most likely to benefit from the program.(HTH)

Steps in the Child's Grasp of Ambiguities through Word Play.

Pub Date—29 Apr 82

Note—38p; Expanded version of a paper presented at the Annual Meeting of the International Reading Association (27th, Chicago, IL, April 26-30, 1982).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Age Differences, *Child Development, *Cognitive Processes, Elementary Education, *Figurative Language, *Language Research, Language Skills, Language Usage, Phoneme Grapheme Correspondence, Reading Comprehension, *Semantics

Identifiers—*Lexical Ambiguity, *Word Games

A study examined the differences in the appreciation of language ambiguity as represented in the word play of children aged 6 through 11 years. In six weekly play sessions, students were read stories containing many lexical ambiguities and pictures and were invited to verbalize and to draw similar ambiguities. Criteria necessary to the construction of an adequate response were the definition of two incongruously related meanings for a single phonetic sequence and the juxtaposition of these meanings in words and pictures to suggest that each is a legitimate interpretation of the other. The results indicated that appreciation of ambiguity in this age range develops from a clarification of sound/meaning relations of potentially ambiguous words or phrases to the exploitation of these relations through play. Moreover, in later years the shift to play with ambiguities represented by literal interpretations of figurative expressions has implications for children's development of metaphorical competencies. Finally, the study's design suggests that word play is a potential contributor to program development in language education. (Several drawings produced by the subjects are appended.) (HTH)

Mangano, Nancy G.

The Effects of Teacher Explanation and Questioning Patterns on Fourth Grade Students during Basal Reading Instruction.

Pub Date—Dec 83

Note—18p; Paper presented at the Annual Meeting of the National Reading Conference (33rd, Austin, TX, November 29-December 3, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Basal Reading, *Classroom Communication, Feedback, Grade 4, Intermediate Grades, *Questioning Techniques, *Reading Instruction, *Reading Research, *Student Reaction, *Teacher Effectiveness, Teacher Response, Teacher Role

A study examined the questioning behavior of teachers following the reading of a basal reader story. The four teachers who served as subjects were chosen from a pool of 18 fourth grade teachers, and were selected because their classes produced the two highest and two lowest mean scores on a standardized reading comprehension measure. Each classroom was audiotaped three times and the tapes were analyzed for questioning behavior exhibited by the teacher and for student behavior when responding. A quantitative analysis of the results revealed that students in the high mean (HM) groups tended to ask fewer questions per session and fewer different questions than did low mean (LM) group students; however, the HM teachers asked more text-based questions than did LM teachers. Both HM and LM teachers incorporated reader-based questions into their lessons, with the HM teachers asking more reader-based questions that were related to the text and the LM teachers deviating from the text during such questioning. In addition, the LM teachers used more questions relating to management, student responses, and other language arts subjects than did HM teachers. Qualitative analysis of data showed that effective teacher questioning (1) focuses on depth rather than breadth of response, (2) is explicit, (3) reflects cohesiveness within multiple question asking as well as throughout the questioning period, and (4) clarifies misconceptions following incorrect responses. (FL)

Strategic Activity in Story Comprehension at Two Levels of Reader Proficiency.

Pub Date—2 Dec 83

Note—15p; Paper presented at the Annual Meeting of the National Reading Conference (33rd, Austin, TX, November 29-December 3, 1983).

Pub Type—Speeches/Meeting Papers (150) — Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Age Differences, *Basal Reading, Comparative Analysis, Grade 4, Grade 6, Intermediate Grades, Learning Strategies, Metacognition, *Reader Response, *Reading Comprehension, Reading Habits, *Reading Research, *Reading Strategies

Identifiers—*Comprehension Monitoring

To investigate the higher level comprehension strategies used by children reading basal reader stories, a study compared the results of an earlier investigation of 50 fourth grade level readers' comprehension strategies with findings gained from 30 subjects using a sixth grade basal reader. Subjects were asked to read aloud from a basal and stop after each sentence to tell what they had been thinking or doing while reading the material. Results showed that similar strategies were used at both reading levels. Inference, personal identification, reference to previous experience, image, evaluation, stated failure to understand, hypothesis, and self-correction were used in both samples, while self-interrogation, back reference, and definition were found among the younger group. An analysis of the responses showed considerable variability in the strategies students chose. Strategy use appeared to vary more as a function of individual reader preference and text than of developmental stage or reader proficiency. (MM)

Decoding Acquisition: A Study of First Grade Readers.

Pub Date—83

Note—20p; Paper presented at the Annual Meeting of the National Reading Conference (33rd, Austin, TX, November 29-December 3, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Academic Aptitude, Age, *Decoding

(Reading), Grade 1, Learning Strategies, Phonemes, *Predictor Variables, Primary Education, *Reading Ability, Reading Comprehension, Reading Instruction, Reading Materials, Reading Readiness, *Reading Research, *Reading Skills, Sex, *Student Characteristics, Textbook Evaluation

Identifiers—*Phonemic Awareness

To determine the factors accounting for children's growth in decoding skill, a study examined school entering characteristics—age, sex, ethnicity, and developmental abilities and school-influenced skills and characteristics—phonemic awareness, letter-name knowledge, basal text, and place in series—of approximately 100 grade one students. Decoding ability was measured by asking the children to read regular or decodable but nonsense words. Intercorrelation analysis of the variables and student performance on three administrations of the decoding test revealed that age and sex were not significant factors in decoding ability, but that language and auditory readiness skills as measured by the Metropolitan Readiness Tests—and all school-influenced variables were significant, with phonemic awareness showing the greatest predictive value. Children with strong phonemic awareness, whether at, above, or below grade level in reading ability, generally performed best on the third decoding measure, although 15 students with above-average phonemic awareness did have below-average scores. Those findings indicated that phonemic awareness is a necessary but not sufficient prerequisite for learning decoding skills. Other factors might be the need to read decodable words in text and the ability to reason and form generalizations. (Extensive tables of test results are included.) (MM)

Mediated (Emergent) Reading Levels: The Construct.

Pub Date—83

Note—13p; Paper presented at the Annual Meeting of the National Reading Conference (33rd, Austin, TX, November 29-December 3, 1983).

Pub Type—Speeches/Meeting Papers (150) — Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Educational Innovation, Elementary Education, Readability, *Reading Achievement, *Reading Diagnosis, *Reading Tests, *Student Evaluation, *Student Teacher Relationship

Identifiers—*Emergent Reading Level

Theory indicates that a fourth, the emergent, reading level may be even more important in understanding the process of reading development than the three previously designated levels: the independent level, at which students have no difficulty reading on their own; the instructional level, at which students need assistance; and the frustration level, at which students cannot gain information from the material even with assistance. The emergent level is the level of highest performance within the zone of proximal development, the area created by the difference between students' unaided performance and the level that could be achieved with aid. To determine students' emergent reading levels, dynamic reading assessment sessions rather than static testing procedures must be used. The level at which students gain information with assistance can be established if teachers provide needed demonstrations, modeling, and coaching during the evaluation session. With adult mediation, students are more likely to be placed at the reading level where growth takes place. (MM)

Descriptors—*Definitions, *Diachronic Linguistics, Etymology, Language Classification, Language Role, Language Universals, *Linguistic Theory, *Semantics

Identifiers—Rigid Designators

Most of the ordinary words in a language do not mean; rather, they act as rigid designators, referring to the same object in all possible worlds in which the object exists. Most words are names that are used as rigid designators of kinds—natural kinds (species, genre, and so forth), artifacts, physical and social magnitudes, and sorts of activities, states, properties, situations, and events. As they designate kinds, it does not make sense to speak of them as having senses or meanings. Although it is appropriate to say that some words (e.g., orphan, kill, or pediatrician) have a sense of meaning that might change with time, kind-name references change, apparently, because the kind has changed, not the term. A few words seem to lack not only sense, but also reference. Some (e.g., all or and) have this property because they are syncategorematic, but contribute to the semantics of an expression according to logical rules. Others (e.g., yikes, damn, or the) do not contribute to the sense at all, but only to the pragmatics, that is what is to be inferred from what was said by reference to the conditions governing the use of such words. It is therefore folly to assume that the reference of most words is determined by their sense of intention. (HOD)

Identifying Main Ideas in Picture Stories and Text.

Wisconsin Center for Education Research, Madison.

Spons Agency—National Inst. of Education (ED), Washington, DC.

Pub Date—[83]

Grant—NIE-G-81-0009

Note—33p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Adults, Age Differences, *Cognitive Processes, Developmental Stages, Educational Research, Elementary Education, *Language Processing, *Reading Comprehension, *Reading Research, Visual Literacy, Visual Perception

Identifiers—*Main Idea, *Picture Stories

A developmental study investigated the pictorial and linguistic main idea identification skills of 104 students in second, fifth, and eighth grades. In the pictorial task, the subjects studied a complete picture story and ranked the effectiveness of four separate main idea alternatives at capturing the meaning of the story. Following the same procedures with a verbal story, subjects chose the most appropriate sentence alternative. The second and fifth grade students performed the tasks individually, and the eighth graders performed them in small groups. Compared with similar studies of adult subjects, the results of the verbal task indicated that children had more difficulty distinguishing between important superordinate and subordinate statements in a main idea identification task than did older students. They also indicated that 11 of the elementary school students had more difficulty distinguishing between subordinate action statements and subordinate setting statements than did adults, although older students appeared better at it than younger ones. The results of the pictorial task indicated that elementary school children of all ages had more difficulty distinguishing between important superordinate and subordinate statements than did adults, with the older students more proficient than the younger ones. These results suggest that both similarities and differences may exist between the processes of verbal and pictorial main idea identification. (HTH)

Lindeman, Mary L.
An Investigation of Eye Movement Patterns in Relation to Cognitive Mapping Style.

Pub Date—Oct 81

Note—26p.; Paper presented at the Annual Meeting of the Texas Personnel and Guidance Association (Corpus Christi, TX, October 1981).

Pub Type—Reports - Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Adults, *Auditory Perception, Cognitive Processes, *Cognitive Style, *Eye Movements, Higher Education, *Learning Modalities, Measurement Techniques, Predictive Validity, *Reading Research, Research Methodology, *Visual Perception

Identifiers—*Cognitive Mapping, Cognitive Style Mapping Instrument

A study was conducted to determine the degree of

relationship between eye movement patterns and cognitive mapping as determined by the Cognitive Style Mapping Instrument (CSMI). It was hypothesized that a high correlation exists between a predominance of visual and auditory eye movement patterns and the visual and auditory cognitive mapping styles determined by the CSMI—visual language (VL), auditory language (AL), and auditory quantitative (AQ) scores. Subjects were 20 students, staff members, or alumni of a large southwestern university. Each completed the CSMI and an individual interview in which they were asked to perform a memorization task by means of a tape recorded message and a written handout. The results of a discriminant analysis procedure were significant at the .095 level of confidence. The findings indicated that AL was the best predictor of visual eye movements, and that the CSMI measured learning modalities the subject was aware of and could report on, whereas eye movements often measured what the subject was not consciously aware of—often different modalities. (Appendix contains a discussion of information processing and cognitive style, the reading passage, and the instructions for the tape recorded message used in the study.) (Author/FL)

Descriptors—Child Language, *Classroom Communication, *Computer Assisted Instruction, Computer Oriented Programs, Computer Programs, Elementary Secondary Education, English Instruction, Family Environment, Integrated Activities, *Language Enrichment, *Microcomputers, *Parent Influence, *Writing Instruction

Identifiers—*Reading Writing Relationship

The home's supportive setting, which has the potential to encourage children to share their thoughts and feelings through spoken language, is the basis of the home's strength as a communicative context. Teachers can help extend this sharing of meaning by creating classroom environments in which written language experiences and microcomputer-based writing and reading activities are surrounded by familiar spoken language. One example of interactive software, Story Maker, enhances the classroom's communicative context by helping children concentrate on the structure and content of narratives rather than on the mechanical aspects of writing. A child using Story Maker has an opportunity to simultaneously play the roles of writer and reader as stories are created from structural branches of a story tree. A second example of interactive software, QUILL, provides activities that encompass the prewriting/planning, composing/drafting, revising/editing, and publishing components of the writing process. Another type of communicative environment can be created by electronic mail systems in which children must attend to their audience by sending messages to peers and adults. Revisions of messages occur with the help of a child-oriented text editor. Parent-child dialogue, integrated spoken and written language experiences at school, and the inclusion of interactive microcomputer activities within the classroom all contribute to the creation of meaningful communicative contexts. Descriptors—*Coherence, Content Area Reading, Content Area Writing, *Expository Writing, *Readability, *Reading Research, Revolutionary War (United States), Rhetorical Criticism, Secondary Education, Textbook Evaluation, *Textbook Preparation, *United States History, Writing Evaluation

Identifiers—*Reader Text Relationship, *Text Structure

In an investigation of the characteristics of "considerate" text, defined as informative, content area text that promotes student comprehension, learning and remembering, this report presents a prototypical chapter of considerate text on American history following the Revolutionary War and a commentary on the writing. Beginning with the commentary, the report first briefly presents a rationale for the topic and identifies the audience—grade 11 students. Stating that theory and research both point out the importance of text coherence in promoting reader comprehension, the report then describes strategies used to develop global, or overall, coherence in the chapter: creating a clear, defensible structure for the text (in this case, goal-action-outcome frames); using an introduction, headings, subheadings, and tables to emphasize the text's organization and content; and relegating the information that might detract from global coherence to an inconspicuous place in the text. To increase local, or phrase, clause and sentence coherence, the chapter uses cohesive ties such as pronoun reference, substitution, and conjunctions or connectives. The second part of the report includes the actual chapter of history text and concludes with reactions by three educators. (MM)

Descriptors—*Classification, *Content Analysis, Content Area Reading, Intermediate Grades, *Questioning Techniques, Reading Comprehension, Reading Instruction, *Reading Research, *Study Skills, Textbook Content, *United States History

The lack of systematic instruction in understanding and answering questions prompted the development of a taxonomy of 300 American history questions sampled from four current and commonly used intermediate grade level history textbooks. Each category of the classification includes a description of the information the question type provides the respondent and the information required in the response. The description is followed by a few representative questions in the interrogative form and a description also includes a target question, an excerpt of text that contains information needed to answer the question, a general format for answers to the question type, and an instantiation of the general format with the answer to the target question. Categories of question types include time, location, quantity, name, concept identification, explanation, description, and comparison. The taxonomy is followed by discussions on the profile of question types; the difficulty of answering questions; lexical, syntactic, and logical structures in questions; the complexity of the concepts contained in questions; the complexity of the relationships linking concepts; the availability of answers in text materials; textual clarity; requirements for answering questions; and student characteristics. Descriptors—*Age Differences, *Cognitive Development, *Cognitive Processes, Literature Reviews, Reading Ability, *Reading Comprehension, *Reading Research, *Reading Skills, Research Methodology

Identifiers—*Inferences, Theory Development
 Since E.L. Thorndike's landmark 1917 study of the complexity of reading comprehension, inferential research has generally focused on either inference as a developmental process or the nature of inferences made during reading. In his 1930 study, R. W. Tyler established that inference could be objectively measured. S. G. Paris conducted several studies in the 1970s showing that readers' age and ability level influenced their inferring skills, and indicating that young children are capable of producing inferences but usually do not do so spontaneously. Examinations of the nature of inferences have not been as conclusive as developmental studies. E. T. Goetz's 1977 study of high school students found no main effects for the importance or salience of the reading material. A 1979 study by P. D. Pearson, J. Hansen, and C. Gordon revealed that prior knowledge has a simple effect for inferable questions but no effect for explicitly stated questions. In a major contribution on the nature of inferring, R. Tierney, C. A. Bridge, and M. Cera discovered that good readers made more causal and conditional connections between propositions while poor readers more often overgeneralized. One point of unanimity in reading research is that inferential ability is vital to mature readers. (MM)

The Specification of High Frequency Words as a Function of Word Shape and Contextual Restriction.

Pub Date—5 Jan 84

Note—17p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Cloze Procedure, *Context Clues, Higher Education, Reading Comprehension, *Reading Research, Vocabulary Development, *Word Frequency, *Word Recognition, Word Study Skills

Identifiers—*Word Length, *Word Shape

A study investigated the hypothesis that high frequency words can be effectively specified when word shape data are combined with available contextual clues. To test this hypothesis, an augmented contextual restriction task similar to one used by R. N. and L. R. Haber was employed. The task differed in terms of increased passage difficulty and the provision of length alternatives. Subjects, 20 college students, rated the appropriateness of each alternative word choice for each of 46 items. They were told to circle all of the words from the total list of alternatives that could be used to construct a reasonable sentence in English, then to underline the single word that they felt had been actually used in the reading passage. Results showed that while word shape exerted significantly more constraint than word length, word length still contributed markedly to high frequency word specification. (Excerpts from the restriction task are appended. (Author/FL)

Descriptors—Cognitive Development, Creative Thinking, English Instruction, Enrichment Activities, *Literature Appreciation, *Low Achievement, *Motivation Techniques, *Paperback Books, Reading Comprehension, Reading Skills, Resource Materials, Secondary Education, *Student Attitudes, *Student Improvement, Study Guides, Teaching Methods, Writing Improvement

A literature teacher used high interest paperback books to develop the educational skills and improve the attitudes of unmotivated students. By introducing new books with guides stressing personal reasoning and values clarification over correct answers, the teacher helped build students' confidence in

their own thinking ability. She pushed students to recognize relationships in print through further study guides and increased student interest with enrichment activities. When reading "Secrets of the Shopping Mall," for example, students studied the feasibility of teenagers being able to survive undetected in their own local mall. The instructor guided students through composition assignments with carefully considered prewriting exercises. Relying heavily on peer tutoring, group work, and school resources, and permitting oral or taped as well as written reports, the teacher developed a course that made reluctant students into more interested readers, thinkers, and writers. Inferential Comprehension: The Effects of Text Source, Decoding Ability, and Mode.

Pub Date—5 May 83

Note—31p.; Paper presented at the Annual Meeting of the International Reading Association (28th, Anaheim, CA, May 2-6, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage. PC Not Available from EDRS.

Descriptors—Academic Aptitude, Cognitive Processes, Decoding (Reading), *Language Experience Approach, Primary Education, *Reading Comprehension, *Reading Research, *Reading Skills

Identifiers—*Inferences, *Reader Text Relationship

First, second, and third grade students were asked to draw inferences after reading stories written by themselves, by peers, and by adults. The 70 subjects were divided into groups of slow-inaccurate, slow-accurate, and fast-accurate readers. After reading each type of story, they responded to six questions requiring text-based inferences. Analysis of both the number of correct responses and the number of erroneous inferences revealed significant decoding ability by story-source interactions. Fast-accurate readers showed similar inferential abilities across all stories, whereas slow-inaccurate readers showed significant story-source effects and slow-accurate readers showed an intermediate trend. All readers demonstrated equivalent inferential abilities for their own stories, but the less skilled readers showed increasing deficits in correct inference making for stories written by peers and adults. There were no significant differences for silent or oral reading conditions. (Author/FL)

Descriptors—*Computer Assisted Instruction, *Computer Programs, Curriculum Development, Elementary Education, English Curriculum, Intermediate Grades, Language Arts, *Microcomputers, *Reading Instruction, Student Educational Objectives, Writing Exercises, *Writing Instruction, Writing Processes

Identifiers—Reading Writing Relationship

Most educational computer software currently available severely restricts the kinds of interaction that can take place between the student and the computer. In fact, an examination of 317 language arts programs listed in a directory of educational software shows that 60% of the programs were of the drill and practice type. In response to this problem, a microcomputer-based writing curriculum was developed for upper elementary students. Entitled QUILL, the curriculum consists of six programs, each of which addresses a pedagogical goal in the teaching of writing. The first program, Planner, helps children to develop planning and critical thinking skills by encouraging children to take notes, write down ideas, and structure thoughts that will later develop into a piece of writing. The second goal of reading and writing integration is incorpo-

rated into the program called Library. With this program students can enter text, assign keywords, and read each other's texts. The program Publisher facilitates the third goal of making writing public by formatting written text for publication. The fourth goal, to support meaningful communication with real audiences, is handled by the electronic message systems or Mailbag. Story Maker, a story construction program, supports the fifth goal of writing with and for peers. Finally, the sixth goal of revision is facilitated by the Writer's Assistant, a text editor that helps with spelling, punctuation, and subject-verb agreement. (HOD)

Descriptors—College Students, Higher Education, Long Term Memory, Measurement Techniques, Predictive Measurement, *Predictive Validity, *Reading Comprehension, Reading Research, *Recall (Psychology), *Research Methodology, Test Reviews, Test Validity, Time Factors (Learning)

Identifiers—Comprehension Tests, *Posner Task, *Retrieval (Memory)

To determine whether the Posner task, which measures the speed at which information is retrieved from the long term memory, improves prediction of reading comprehension, 121 students from reading and study skills and teacher education courses were administered the Posner task and listening comprehension, reading comprehension, and SAT verbal tests. For the Posner task, students were asked to identify pairs of letters as identical, related, or dissimilar. A comparison of test results indicated that findings from the Posner task cannot be generalized to all reading tests. The retrieval speed measure appeared to add to the prediction of reading comprehension only when the reading measure was closely matched to that of listening comprehension. The varying correlations among the reading comprehension measures suggested that different reading tests tapped different verbal and visual processes. While the Posner task was not always useful in improving prediction of reading comprehension, it does contribute to current efforts to design and develop information processing measurements related to reading comprehension. (Tables of correlation results are included.) (MM)

Theoretical Models of Reading: Implications for the Beginning Reader.

Pub Date—[83]

Note—14p.

Pub Type—Reports - Research (143) — Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage. PC Not Available from EDRS.

Descriptors—Basal Reading, *Beginning Reading, Case Studies, Context Clues, Language Experience Approach, *Learning Theories, Miscue Analysis, *Models, Phonics, Primary Education, Reading Comprehension, *Reading Instruction, Reading Research, *Reading Skills, *Reading Strategies, Teaching Methods

To provide the most effective instruction, materials, and support for beginning readers, teachers need to know if young children are more likely to process from print to meaning—bottom-up or text-driven processing—or to interpret print to follow meaning-top-down or concept-driven processing. While some studies reveal a correlation between beginning reading instruction and reading strategies used by students, others indicate that, irrespective of the strategies taught, good readers combine top-down and bottom-up processing. In a case study focusing on reading development, a four-year-old child learned to read from the words and meaning in her own repertoire. Miscue analysis of her tape-recorded reading of basal texts showed that she was processing unfamiliar texts using an effective interaction of concept-driven and text-driven strategies. The study suggested that if children are too dependent either on expectations they bring to the text or

on print as the sole source of meaning, they will be poorly equipped to handle the complexities of unfamiliar passages. Teachers therefore need to make children aware of the different reading strategies available to them. (MM)

Descriptors—*Abstract Reasoning, Child Language, *Cognitive Processes, Elementary Education, *Language Acquisition, Language Handicaps, Problem Solving, *Reading Comprehension, Reading Difficulties, Reading Improvement, *Reading Instruction, Reading Programs, Reading Research

Identifiers—*Cause Effect Relationship, *Language Delayed

Hypothesizing that severely language delayed children lack sufficient understanding of causal structure to comprehend stories, a reading program concentrated on developing the causal reasoning of 10 children between the ages of 10 and 12 with a verbal intelligence quotient two to three years below average. Instructional activities in the eight-week program stressed (1) identifying story information categories and causal relationships in simple and more complex stories, (2) completing macro-closure exercises, (3) creating story trees or graphs, and (4) initiating and responding to inferential questions about causal relationships in stories. Comparing the instructional group's pretest and posttest causal reasoning and recall scores with those of six students of similar age and aptitude indicated that the instructional group did make progress but that the progress varied across tasks and across children. The results showed no significant improvement in student recall. The data demonstrated the importance of matching the instruction to children's readiness level and indicated that global effects of new instruction are unlikely. It also indicated that causal relationships among elements within and between story episodes are important aspects of reading skill. (Extensive tables are appended.) (MM)

Descriptors—Bibliographies, *Core Curriculum, Curriculum Development, Graduate Study, Higher Education, Information Dissemination, Literature Reviews, Publications, *Reading Instruction, *Reading Research, *Teacher Education

Because the core curriculum for reading education evolved in an unsystematic manner, it has no "official sanction" and is thus very difficult to challenge or to supplement. The traditional "publish and wait" means of challenging existing conventions or submitting alternative propositions has changed without notice, largely due to increased political activism and information inflation. One approach to combating these two factors is to establish a core literature that would provide a body of commonly known facts that could be alluded to in discourse among members of the field. Developing a core literature would necessarily involve ranking the most frequently cited articles, studies, and books; critically annotating the most highly ranked citations; and maintaining a committee responsible for recommendations and revisions. The list developed by Nancy Wilcox contains 43 ranked citations, but none of the logical refinements to which this list lends itself diminishes the value of a departmentally sanctioned list. A sanctioned core literature would be very much like a "controlled substance" in pharmacy; it could be powerful when appropriately governed and used by ethical, well trained, practicing professionals, although dangerous where any one of these elements were absent. The Wilcox list is appended. (HTH)

Meeting Students' Need to Understand Structure in Expository Text.

Pub Date—Jul 83

Note—28p.; Paper presented at the Annual Meeting of the United Kingdom Reading Association (Worcester, England, July 25-29, 1983).

Pub Type—Information Analyses (070)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.
Descriptors—Classification, Cognitive Processes, Content Area Reading, *Reading Comprehension, *Reading Instruction, Relationship, Schemata (Cognition), Secondary Education, Skill Development, Teaching Methods, Vertical Organization

Identifiers—Expository Text, *Reader Text Relationship, *Text Structure, Visual Cues

The intended significance of text conventions must be understood if reasonably convergent text interpretation is to occur. If students can learn to recognize structural cues or signals, then they can group words into units with particular inner relationships. Expository text comprehension consists of integrating at least three structures: the written text, the concepts underlying the text, and the concepts or schemata already in the mind of the reader to which unfamiliar ideas can be related. These three structures are related through the categorizing process, which, in expository text, usually takes the classical form. This form defines attributes and sees items in a group as equivalent in some way. This implies the need to bring into the students' consciousness range their own strength as categorizers in daily life, and then help them use this ability to perceive categories in text. Expository text as a hierarchy is visually signalled by such devices as headings, typefaces, and spacing on the page, as well as by punctuation and by relation and transitions words. A plan encouraging the automatic search for structure when reading involves presenting students with a text page typed only with "Xs," relating it to known conventions of expository text, and showing how to predict text from headings. EDRS Price - MF01/PC01 Plus Postage.
Descriptors—College Students, *Computer Assisted Instruction, *Computer Programs, Higher Education, Independent Study, Reading Comprehension, *Reading Skills, *Study Skills, Teaching Methods, *Test Wiseness

Test wiseness programs and computer assisted study skills instruction (CASSI) were found to be valuable resources for college reading and study skills instructors and students at St. Cloud State University (Minnesota). Two booklets on test wiseness cues were reorganized and used as computer programs to allow the information to be presented outside class time, to encourage student involvement in the exercise, and to provide more variety in the instructional format. Written in an outline format, the first program explained each test wiseness cue and followed it with test items. A second program was added that included more cues and forced students to indicate the principle they were using to answer test questions. The CASSI program, which was included as an independent study module to the reading and study skills course, contained 12 lessons: (1) introduction to study skills, (2) motivation and achievement, (3) time management, (4) reading textbooks, (5) effective note taking, (6) concentration, (7) improving the memory, (8) procrastination, (9) studying for exams, (10) taking exams, (11) reducing test anxiety, and (12) writing papers. (Instructions for using CASSI are appended.) (MM)

Identifiers—*Soviet Education, *USSR

An examination of the Russian reading program, this report first describes the nature of American interest in Soviet education. Sections 3, 4, and 5 then present overviews of the Soviet cultural context, the structure of the Russian language, and the organization of the Soviet school system. Section 6 discusses the course of language study from grade 1 through grade 10, and section 7 suggests that Soviet teaching methods are guided by efforts to consolidate and test knowledge and to promote practical skills and habits. In discussing the theoretical and methodological foundations of reading instruction, section 8 indicates the importance of phonetic analysis in elementary school reading and writing instruction. Section 9 advances the view that the goal of the Soviet reading program is to create talented readers, and sections 10 and 11 present Soviet instructional strategies for teaching reading and describe the bukvar, or Russian primer. Section 12 examines the literature and grammar texts in the system and section 13 attempts to evaluate the reading achievement of Soviet students. In the final 2 sections it is concluded that Soviet schools offer children quality education, and that schools in the United States cannot afford to offer their students any less. (MM)

An Analysis of Narratives: Scoring Manual.
Pittsburgh Univ., Pa. Learning Research and Development Center.

Spons Agency—National Inst. of Education (ED), Washington, DC

Report No.—LRDC-1983/17

Pub Date—83

Note—106p.

Pub Type—Reports - Research (143)—Guides - Non-Classroom (055)

EDRS Price - MF01/PC05 Plus Postage.

Descriptors—*Content Analysis, Narration, Reading Comprehension, Reading Research, *Research Methodology, *Structural Analysis (Linguistics)

Contributing to current research in narrative comprehension, this booklet describes three steps in content analysis of texts: dividing text into content units, identifying the connections between each content unit, and classifying each content unit as central, supportive, or distracting. The first section of the report presents an overview of the materials covered, the second section discusses the procedure for dividing text into content units, and the third section outlines the method of identifying relationships. The fourth section examines additional complexities in identifying these relationships and the fifth describes the procedure for classifying content units. The sixth section discusses an additional step in content analysis—distinguishing between content subunits that describe the gist of an event or state or that further modify the content unit. The final section presents an extended example of the entire analysis. (MM)

Identifiers—National Commission on Excellence in Education

Intended to assist educational leaders by identifying recommendations from the report, "A Nation at Risk," that are relevant to reading and literacy and by suggesting instructional guidelines consistent with both the report and current reading research, this booklet presents policy guidelines in the following areas: (1) literacy processes, (2) curriculum content, (3) teacher effectiveness, (4) textbook quality, and (5) parent involvement. The first section discusses instructional objectives for reading, writing, and study skills while the second briefly touches on methods of implementing English instruction, reading across the curriculum, and the United States' literary heritage. The third section examines the impact of time use, organization, and teacher preparation on teacher effectiveness, and the fourth considers the selection and use of textbooks. The final section discusses the importance of parental involvement in children's education. (MM)

Identifiers—Inference Skills, Parsing, *Text Structure

A contract deliverable on the NIE Communication Skills Project, this report consists of three separate documents describing the instructional implications of the analytic and empirical work carried out for the "Classroom Instruction in Reading Comprehension" part of the project: (1) Guidelines for Phrasal Segmentation; (2) Parsing Tasks in Reading Comprehension Research; (3) Reading Comprehension: Definitions and Instructional Methods. All three papers are designed to give practical guidelines to teachers or training personnel in the use of innovative instructional methods helpful for poor readers. The first paper presents guidelines for producing segmented text for students with moderate skills in single word recognition but problems in reading connected text. The guidelines, which give technical and syntactic criteria for locating appropriate phrasal units, are illustrated by a text sample used in an experimental study. The second paper deals with parsing tasks, which represent a second stage of training in phrase and clause boundary reading and are designed to show students how to use intuitive notions of sound and meaning to parse sentences and locate groups of words that "go together." The third paper describes some classroom techniques and methods that will help students develop inferential comprehension skills on higher levels of text structure. (HOD)

Reading as an Interactive Process.

Pub Date—8 Oct 83

Note—66p.; Paper presented at the Annual Meeting of the Boston University Conference on Language Development (8th, Boston, MA, October 7-9, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Academic Aptitude, *Cognitive Processes, Elementary Education, Grade 3, Grade 6, Language Usage, *Linguistics, Models, Predictive Validity, Reading Processes, *Reading Research, Reading Strategies, *Research Methodology, Semantics, Syntax

Identifiers—Interactive Reading, Protocol Analysis

A study examined the linguistic strategies of strong and weak readers in grades three and six within the context of D. E. Rumelhart's interactive model of the reading process. A linguistic prediction task was set up to investigate students' use of ortho-

graphic constraints, syntactic redundancy, and syntactic and semantic knowledge. A program was written for a computer so the prediction task could be presented as a progressive cloze activity. The data were examined using inferential and descriptive statistics and detailed protocols of individual performances. Contrary to prediction, inferential analyses of the data revealed no significant differences between the groups of readers. Descriptive statistics showed some of the problems underlying the application of inferential analyses. Protocol examination, comparing the performance of ideal readers with real ones, was the most revealing form of analysis as it showed the individual differences of children in using interactive processes to carry out language tasks. A Theory of Graphs for Reading Comprehension and Writing Communication.

Pub Date—[83]

Note—51p.

Pub Type—Reports - Evaluative (142) — Opinion Papers (120)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Charts, *Classification, Definitions, Elementary Secondary Education, *Graphs, *Nonprint Media, *Reading Comprehension, Reading Instruction, *Theories, Writing (Composition), Writing for Publication, Writing Instruction

Graphs are increasingly being used in written communication and writers expect readers to understand them. One definition of graphs—information transmitted by position of point, line or area on a two dimensional surface—excludes displays composed chiefly of numbers or words such as tables or outlines. However, it does include time lines, flow charts, curve (line) graphs, bar graphs, scattergrams, pie graphs, dials, maps, pictures, and abstract drawings because they all transmit information nonsymbolically on a two dimensional surface. Fundamental to comprehending (reading) or writing a graph is knowing the types of underlying coordinates, the scaling, and other factors. The underlying theory is that all graphs are basically one dimensional, two dimensional, or three dimensional. A taxonomy of graphs can help elucidate this theory with numerous categories and examples. Together, the definition, theory, and taxonomy can be useful for teaching and testing graph knowledge in the public schools and in helping writers and readers in many communication media, including journals, textbooks, popular press, computer graphics, and television. (Appended is a taxonomy of graphs.) (Author/HOD)

Descriptors—Classroom Techniques, *Feedback, Grade 1, Models, Primary Education, *Questioning Techniques, *Reading Instruction, *Small Group Instruction, Student Teacher Relationship

Designed to present a workable system for first grade reading group sessions, this report contains a detailed explanation of 22 principles for managing small group instruction. The principles it describes reflect experience and research involving teachers and young children in small groups and fall into two major categories: organizing and managing the sessions and responding to children's answers. Under the first heading, the report discusses principles concerned with getting children's attention, introducing the lesson, calling on children, and meeting individual learning needs within the group. Under the second heading, the report examines what to do when children fail to respond or respond incorrectly, how to acknowledge correct answers, and how to give praise and criticism. (MM)

Descriptors—Correlation, Elementary Education, *Elementary School Teachers, Feedback, Pretests, Posttests, Questioning Techniques, Reading Achievement, Reading Improvement, *Reading Instruction, *Reading Research, *Teacher Education, *Teacher Effectiveness, Teacher Improvement, Teaching Methods

A study investigated the effect of research-based instructional strategies on the reading achievement of students in grades two through five. Instructional process variables were assembled into a manual used to train 24 experimental teachers. The five categories of variables were (1) classroom environment, (2) lesson introduction, (3) lesson presentation, (4) questioning, and (5) feedback. The teachers were randomly assigned, stratified by grade level, to observed or unobserved experimental groups or to a control group. The experimental treatment was designed to enhance teachers' use of reading instructional strategies associated with reading achievement. Pupils were pretested and posttested with the McGraw-Hill Prescriptive Reading Inventory. Observational data gathered on teachers' use of instructional process variables were correlated with adjusted pupil reading achievement scores to specify the strengths of associations between the two. No significant differences were found among treatment and control groups, so data were examined for differences among teachers. Significant positive correlations for "more effective" teachers were found between pupils' total reading achievement and the instructional process variables of engaging students in learning and asking direct questions. Significant negative correlations were found between achievement and the instructional variables of asking rhetorical questions and giving nonacademic commands. (HTH)

Descriptors—College Students, *Eye Fixations, *Eye Movements, Higher Education, *Reading Processes, *Reading Research, Word Recognition

To examine the nature of forward saccadic eye movements in reading, eye movement records were collected from college students as they read a short passage. Forward saccades from this data set were analyzed to determine factors influencing the likelihood of any given letter in the text being the recipient of the next fixation. Data indicated that the likelihood of forward saccades taking the eyes to a particular letter position is a function not only of the distance of that position from the prior fixation, but also of the word length and the letter position in the word being read. The analysis suggests that in reading the eyes are simply sent to the next unidentified word with location preferences in the word being a complex function of length and distance. (Graphs of the data are included.) (MM)

Descriptors—Content Area Reading, Grade 4, Grade 6, Intermediate Grades, Questioning Techniques, *Reading Comprehension, *Reading Instruction, *Reading Research, Reading Skills, Skill Development, *Social Studies, Teaching Methods, Textbook Research, *Textbooks

Five social studies programs at the fourth and sixth grade levels were examined to determine how much and what kind of reading comprehension instruction was provided in both the students' and teachers' editions of the texts. Programs studied were those published by Follett; Harcourt, Brace, Jovanovich; Laidlaw; Macmillan; and Scott, Foresman. Results showed that publishers of four of the five programs acknowledged the importance of reading in the social studies curriculum and purported to teach reading-related skills. However, there was little direct instruction of these skills, and what little instruction there was often seemed inadequate. The programs relied primarily on having students practice or apply skills without the benefit of instruction in how to do this. This situation may stem from (1) the confusion regarding what "reading skills" really are, (2) the fact that what is known about teaching reading comprehension is not finding its way into the social studies programs, and (3) the fact that really good instruction in content area reading takes time to develop and time to practice, and publishers seem to be unwilling to invest a large amount of their resources in developing reading instruction. (Excerpts from the teachers' editions and charts of reading skills covered in the textbooks are appended.) (FL)

Descriptors—Cognitive Style, College Students, Decoding (Reading), Language Processing, Oral Reading, *Phonology, Pronunciation, *Reading Comprehension, *Reading Processes, *Reading Research, *Silent Reading, *Visual Perception Identifiers—*Tongue Twisters

The assumption that phonological processes support comprehension guided two experiments in manipulating the similarity of the consonant code both within silently read sentences and between these sentences and concurrently vocalized phrases. The first experiment examined whether tongue-twisters would take longer to read than phonetically "neutral" sentences (those containing a natural mix of phonemes). The second experiment examined whether the phonological activation that occurs in reading is shared by vocalization. For example, reading a tongue-twister with many initial "t"s and "d"s might be additionally impaired by vocalizing phrases with alveolar consonants, "/d/" or "/t/." Results support the assumption that phonological processes are involved in at least some of the tasks of silent reading. However, the lack of a consistent interaction between consonant vocalization and specific tongue-twister sentences did not support the hypothesis that vocalization suppresses phonological codes used in reading. The lack of specific interference between concurrent vocalization and the reading task suggests that these automatically activated phonetic representations are not subvocal motor programs. In reading, concurrent vocalization may play a role similar to its role in memory. That is, it may impair reading not because it interferes with phonological activation, but because it requires capacity within a limited capacity cognitive system. (HOD)

Descriptors—Age Differences, *Cognitive Processes, Concept Formation, *Decoding (Reading), *Individual Differences, Reading Ability, Reading Comprehension, Reading Processes, Reading Research, Research Needs, *Verbal Ability, *Verbal Learning, *Word Recognition Identifiers—*Verbal Processes

Reading encompasses a wide range of verbal processes, among them such simple verbal processes as word decoding, letter recognition, name retrieval, and semantic access. The question is whether simple verbal processing differences are adequate to account for general reading ability differences. Across different verbal domains and different ages, the hallmark of skilled verbal processing is efficient word retrieval from inactive memory. What varies across different verbal domains and verbal skill levels is the extent to which one or the other of these simple processes is rate limiting for an individual. Research studies have shown that among children, the rate limiting process is word decoding, whereas among college students it is name retrieval. However, verbal knowledge also makes a contribution to general verbal ability that cannot be easily reduced to simple verbal processes. Simple verbal processes cannot account for either differences in the ability to compose a text or to appreciate distinctions between semantically related words. The former entails a number of complex verbal abilities producing wide individual talents while the latter implies fairly simple but powerful semantic and morphological knowledge. Such abilities suggest cognitive components beyond simple verbal processes. (HOD)

Descriptors—Comparative Analysis, *Context Clues, Decoding (Reading), *Models, *Reading Ability, Reading Difficulties, *Reading Rate, Reading Research, Reading Skills, *Word Recognition, *Word Study Skills

One model of interactive processing useful in describing word identification processes in discourse context is of a weakly interactive type. This type assumes that the time to identify a word in context is an activation function, whereas the time to activate a word in memory beyond some critical identification threshold is a multiplicative function of context plus the individual's basic word processing rate. Studies confirm this model's predictions for individual differences in the time to read a word in context: skilled readers identify words more quickly and are affected less either by context or by stimulus degrading than unskilled readers. Conversely, while less skilled readers are more dependent on context to compensate for less efficient word identification skills, they are less able to use context to predict words. (HOD)

nitive Measurement, *Cognitive Processes, *Epistemology, *Models, Perception, Research Methodology, Spatial Ability, Visualization Identifiers—*Analogue Models

Considerable discussion and debate have been devoted to the extent and nature of structural or functional correspondence between internal representations and their external visual counterparts. An analogue representation or process is one in which the relational structure of external events is preserved in the corresponding internal representations. A great deal of experimental evidence purporting to demonstrate the existence of analogue internal representations and processes has accumulated during the past decade. These experimental efforts have the use of a powerful psychophysical technique—mental chronometry—in common, thus permitting inferences about internal mental events and processes from purely observable data. However, analogue models for visual/spatial representations and transformations have recently been challenged on both empirical and theoretical grounds. The empirical challenges can be shown to be inconclusive, and further experimental work is needed to resolve inconsistencies. The theoretical challenges have taken the form of proposing nonanalogue models that may account for at least some of the findings generally regarded as supporting the need for positing analogue representations and transformations. An internal process can qualify as analogue if it can be shown that the intermediate stage in the processing has a one-to-one relation to the intermediate stage of the corresponding external process. Conceived in this fashion, the nature of analogue representations can be assessed in behavioral experiments that have the potential of elucidating the way in which mental processes simulate or model external operations and events. Descriptors—*Cognitive Ability, Comparative Analysis, Elementary Secondary Education, Expository Writing, Grade 3, Junior High Schools, *Mild Mental Retardation, Narration, *Reading Ability, Reading Comprehension, *Reading Research, *Reading Skills, *Recall (Psychology), Remedial Reading, Schemata (Cognition) Identifiers—*Inferences

The inferential operations of mildly retarded students reading at the intermediate level were investigated using methods based on discourse comprehension theory. It was hypothesized that problems encountered in reading by these students were related to difficulties in generating logical inferences. Mildly retarded junior high school students and average third grade students of the same reading comprehension level read and recalled one descriptive expository and one narrative passage. On the expository passage, mildly retarded students generated the same quantity of inferences as average third grade students, but the inferences were of inferior quality. On the narrative passage the differences between the two groups were not significant. Differences in inferences generated by mildly retarded students may have been prompted by problems with schema mobilization, maintenance, and refinement in the context of dealing with descriptive expository text. ment, *Reading Research, Reading Skills, *Regression (Statistics)

Identifiers—*Reading Expectancy

To determine the most accurate means of estimating the expected grade or reading level of 51 sixth grade students, three expectancy formulas were compared to a custom regression equation from a user friendly microcomputer program. The expectancy formulas, based in part on student I.Q. and chronological age, and the regression equations were compared with students' actual achievement level as measured by the California Achievement Test. Results indicated that the regression equation had twice the predictive power of the generalized expectancy formulas and could easily be developed by teachers for their own classes. (MM)

The Effects of Learning Style on Reading and Language Arts and Differences in Learning Style among Groups of Eighth Grade Students.

Pub Date—Feb 84

Note—24p.; Paper presented at the Annual Meeting of the Texas Joint Council of Teachers of English (19th, Dallas, TX, February 2-4, 1984).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—Academic Achievement, *Cognitive Style, Educational Environment, Grade 8, Junior High Schools, *Language Arts, Learning Motivation, *Learning Processes, Racial Factors, *Reading Research, *Reading Skills, Sex Differences, Socioeconomic Influences, Student Attitudes

Over 1,000 eighth grade students participated in a study to determine the relationships between learning style and reading/language arts skills as demonstrated by standardized testing. It was hypothesized that (1) individual learning style contributes significantly to reading and communication skills, (2) specific learning style elements acting together account for a significant amount of variance in reading and communication skills, and (3) no significant differences exist between sexes, races, and socioeconomic levels in preferences for learning style elements. Subjects were administered the Learning Style Inventory (LSI) and the Comprehensive Test of Basic Skills (CTBS). Demographic data were gathered from the subjects' school enrollment records. The results supported the first and second hypotheses. Levels indicated that individual learning style accounts for 16% of the variance in reading and language arts skills. For reading skills, the most critical elements were persistence, adult motivation, authority figures not present, and intake. For language arts skills, the same four elements were identified as the most critical, but in a slightly different order. Hypothesis three was not supported: significant differences appeared in learning styles between boys and girls, among White, Black, and Hispanic students, and among the three predetermined socioeconomic levels. (Appendix contains a chart of learning style elements, a description of the LSI, and a sample profile.) (HTH)

Metaphor: The Heart of Reading and Writing.

Pub Date—Nov 83

Note—30p.; Paper presented at the Annual Meeting of the New York State Reading Association (Kiamasha Lake, NY, November 8-13, 1983).

Pub Type—Speeches/Meeting Papers (150)—Opinion Papers (120)—Information Analyses (070)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—Abstract Reasoning, *Child Language, *Cognitive Processes, Context Clues, *Developmental Stages, Elementary Education, Language Arts, *Language Usage, *Metaphors, Reading Comprehension, Reading Instruction, Sentence Structure, *Teaching Methods, Writing Instruction, Writing Skills

As human understanding is largely metaphorical, what metaphor is, how children use it, and how they can be taught to use it more effectively are important educational concerns. A direct or indirect comparison between two apparently unlike things, metaphor consists of a topic, a vehicle of comparison, and ground—or traits—linking the topic and the vehicle. When the metaphor is interpreted, tension created by the comparison is resolved. A metaphor may be either context independent (a part sentence metaphor that is meaningless when interpreted literally) or context dependent (a whole sentence meta-

phor that may have a literal meaning in another context). Metaphors are evident in children's earliest speech and increase in frequency until the early elementary school years. With adolescence, metaphor usage again increases. Children's success at interpreting a metaphor seems to depend on the developmental cognitive stage controlling their thinking. First basing comparisons on physical similarities, children gradually begin to compare psychological and abstract qualities. Instructional procedures for developing student skill with metaphors include naming and classifying exercises, work with situational ambiguities, use of metonymy, and attention to the affect that a word's function in a sentence has on its meaning. Descriptors—Academic Aptitude, Elementary Education, Learning Theories, *Placement, Readability, *Reading Achievement, Reading Comprehension, *Reading Diagnosis, *Reading Instruction, *Reading Tests, *Testing

Identifiers—*Emergent Reading Levels, Expository Text, Narrative Text, Vygotsky (Levs)

Two experiments were conducted to determine the emergent reading levels of elementary school students. In the first experiment, 27 third grade and 27 sixth grade students of average reading ability from rural schools in central Florida were given pretest and posttest cloze passages on science materials two readability levels above their grade placement. Between the tests, one half of the students (the experimental group) received instruction on the material covered. The significant effect for treatment of both third and sixth grade cloze posttest data supported the construct of emergent reading levels based on the zone of proximal development. L. S. Vygotsky (1978) defined the zone of proximal development as the difference between students' actual and potential developmental level. Students' zone of proximal development appeared to be two levels above their instructional reading level. In the second experiment, baseline data were collected on the reading and vocabulary development of 23 fifth grade students from an urban north Florida school, comprehension pretests based on narrative passages were administered to all students, the experimental group received adult mediation, and all students completed comprehension posttests. Results indicated that students would be independent at reading level seven and instructional at level eight and above. The experiments suggested that emergent reading levels are a viable alternative to instructional reading level for placement in reading materials. (MM)

What Happens to Writing Apprehension in a Reading Class?

Pub Date—Oct 83

Note—15p.; Paper presented at the Annual Meeting of the South Central Modern Language Association (Fort Worth, TX, October 27-29, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—Academic Aptitude, College Freshmen, Higher Education, Integrated Activities, *Reading Ability, *Reading Instruction, *Reading Research, Reading Skills, Student Needs, Teaching Methods, *Writing Apprehension, *Writing Research, Writing Skills

A study investigated whether reading ability is a significant factor in the level of student writing apprehension and whether writing apprehension is reduced as reading skills improve. Subjects were 49 college freshmen enrolled in a reading improvement course that was directed toward learning in three domains: (1) cognitive-knowledge, synthesis, and application of reading skills; (2) psychomotor-actual reading; and (3) affective-reading as an enjoyable, nonthreatening experience. Instruments used in the study were the Nelson-Denny Reading Test, which was administered both at the beginning and

at the end of the course, and the writing Apprehension Test, which was administered during freshmen orientation experiences before enrollment. Results indicated that reading ability contributed to low apprehension and lack of reading ability to high writing apprehension, which, in turn, kept anxious writers from effective reading. The findings suggest that improvement in one area will lead to improvement in the other, and that any experience with language that brings a student to a more intimate, comfortable station with words will transfer skill to the entire spectrum of language. (A copy of the Writing Apprehension Test is appended.) (FL)

Identifiers—*Aliteracy

Defining aliteracy as the problem of persons who are able to read but choose not to, the conference papers in this compilation focus on whether aliteracy is a significant and growing problem, whether literacy is an important value, and how the survival of literacy can be ensured. Following an introduction to the purpose of the conference, the eight papers discuss the following topics: (1) the nonreading culture, (2) aliteracy and the newspaper industry, (3) television and literacy, (4) the "reading to learn" approach, (5) books in an electronic age, (6) aliteracy and the decline of the language, (7) the magazine industry in a time of change, and (8) the role of the schools in teaching reading. The compilation includes two discussions of questions relative to these topics. (HTH)

Descriptors—Content Analysis, Curriculum Development, Curriculum Guides, *Educational Needs, Educational Trends, Elementary Secondary Education, *English Curriculum, Instructional Materials, Language Arts, *Listening, *Listening Skills, *Literature Reviews, Reading Comprehension, Research Needs, Textbook Content

Identifiers—Theory Practice Relationship

An overview of the literature of listening illustrates the lack of sufficient research in this area. A 1955 survey of curriculum guidebooks and bulletins for the inclusion of listening demonstrates the effect of limited research: most documents devoted anywhere from two to six pages to listening in elementary through secondary school levels. In another survey of 7,762 curriculum documents included in the ERIC datafiles, only 4.5% mentioned listening for various grade level clusters, and a close inspection of curricular materials housed at the 1980 Curriculum Development Library reveals considerable differences between the treatment of listening and the treatment of the other language arts. The attitudes underlying these differences may be reflected in the documents themselves. For example, the inclusion of listening appeared to be an afterthought

in some of the material. Many documents also treated listening in vaguer terms than other language arts. In a final example of the lack of attention given to listening, several documents included the significance of listening in their philosophy statement, but few visibly reinforced this goal. Because research indicates that listening comprehension augments reading comprehension, it is becoming increasingly important for professional educators to incorporate listening skill development into the curriculum. Descriptors—Attitude Measures, *Content Area Reading, Elementary Secondary Education, In-service Teacher Education, *Methods Courses, Preservice Teacher Education, *Reading Instruction, *Reading Research, Reading Strategies, *Teacher Attitudes, *Teaching Experience, Teaching Methods

To determine if subject matter taught or years of teaching experience after taking methods courses influenced teacher attitudes toward teaching reading in the content areas, questionnaires were completed by 105 middle, junior, and senior high school teachers who had completed methods classes in content area reading. Results of four subscales on teacher attitudes toward content area reading issues, benefits, use, and significance indicated that teacher attitudes, while positive, were not strong enough to initiate use of reading strategies in their classrooms. A comparison of teacher groups showed that teachers whose subject matter demanded more reading, such as English or social studies, placed the most value on content area reading strategies. Results also revealed that less experienced teachers had better attitudes than the more experienced group, indicating the need for more widespread implementation of the inservice model developed by Dupuis, Aakov, and Lee (1978). Computers and Composition: An Overview.

Pub Date—[83]

Note—16p.

Pub Type—Opinion Papers (120)—Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Computer Assisted Instruction, *Educational Change, Elementary Secondary Education, Futures (of Society), *Microcomputers, Revision (Written Composition), *Technological Advancement, Word Processing, *Writing Instruction, Writing Processes

The tools of writing have changed as technology has become more advanced. In fact, the contributions of the microcomputer are already beginning to make print and paper technology appear primitive. The book is at a disadvantage since it stores and displays the information, whereas the microchip stores while the computer displays. Because of this basic difference, interaction with the information stored is possible with the computer, while the book in and of itself is essentially passive. Word processing is also changing the ways in which writing and the writing process are perceived. Nearly all comments by writers who actively use word processors indicate that processing's great advantage is speed. Beyond this important consideration is that writers can start to see revision as part of the process of moving from writer to reader based prose. The microcomputer has also influenced the teaching of writing. Already, experimental and developmental programs in the use of computers to teach writing are being developed all over the world and at all levels of education. Despite the microcomputer's potential for writing and composition, however, humanists should be warned against the possible economic, social, racial, and sexual differences that may surface as part of the computer culture. (A bibliography on computers and composition is appended). (HOD)

Identifiers—Reader Text Relationship, Reading Writing Relationship, *Textual Analysis, Theory Practice Relationship, *Voice (Rhetoric)

Given critical theory's current focus on the interaction between writers and readers over the surface of a text, it seems appropriate to examine the semantic component concerned with how writers anticipate that interaction—the interpersonal component. The relevance of the interpersonal component is apparent in traditional instruction on point of view and tone. Most composition texts encourage students to maintain a consistent point of view through consistent lexical and grammatical choices of a certain formality and purpose; many texts also encourage students to think of these choices within an initially determined rhetorical stance incorporating attitudes toward the reader and the subject matter. But the scalar nature of these choices reveals interesting information about why some shifts in point of view and tone are considered acceptable and others are identified as performance errors. An analysis of several text samples reveals that certain shifts do occur in "professional" texts, but that such shifts must be modulated in order to be acceptable; unmodulated, abrupt shifts will still be perceived as mistakes. Further, such shifts must occur within the limits of variation established at the beginning of a text. The treatment of point of view and tone as part of the interpersonal component of texts permits a more accurate description of shifts and a more precise explanation of the difference between acceptable and unacceptable shifts in point of view and tone. (Three text samples are appended). (HOD)

Descriptors—Content Analysis, *Intellectual History, Media Research, *Newspapers, *News Reporting, *Periodicals, Press Opinion, *Rhetoric, Rhetorical Criticism, *Social History, United States History

Identifiers—*Journalism History, *Radical Press
Through an analysis of the products of the radical press, this paper presents the rhetorical outlines of a cultural history of the 1930s. Following an overview of the "reportage" of the radical press, the paper focuses on that medium's rhetoric, specifically its conscious and unconscious use of religious symbolism. Among the publications analyzed in the paper are "Social Justice," the newspaper of Father Charles Coughlin; "Modern Quarterly"; "Ken"; "The Daily Worker"; "The Silvershirt Weekly"; "The Harlem Liberator"; "The New Militant"; and "People's World"; as well as pamphlets, manifestos, and other irregularly published materials. In addition, it draws upon materials from biographies, autobiographies, and histories—particularly those written by members of the radical left—and on data from more reformist publications such as "The Nation." The paper concludes that there were clear similarities between the problems identified by each of the radical groups—fascists, communists, socialists, and technocrats—of the 1930s. It notes that the villains and sins they identified were identical, and that the solutions they advocated had one thing in common—they were radical departures from the reformist tendencies in the American tradition. A Study of Interviewing, Personality and Bias: The Assessment of a Political Incident by High School Journalists.

Pub Date—Aug 83

Note—36p; Paper presented at the Annual Meeting of the Association for Education in Journalism and Mass Communication (66th, Corvallis, OR, August 6-9, 1983).

Pub Type—Reports - Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Attribution Theory, *Bias, Communication Skills, Human Relations, Interpersonal Communication, *Interviews, *Journalism Education, Media Research, *Personality Traits, Secondary Education, Student Attitudes

Identifiers—Self Monitoring

If greater self-monitoring can lead to greater awareness of the characteristics of others, self-monitoring should be positively related to personality attributions and negatively related to situational attributions. To compare the relationship between self-monitoring and attributions when gaining information through social interactions and through reading only, high school journalism students were asked to complete a self-monitoring scale and were assigned to either a control or an experimental group. Control students received printed information from three sources on an incident occurring at another high school, and experimental students were instructed to interview these sources about the incident. After writing stories on the incident, students from both groups filled out questionnaires designed to determine the extent to which they saw personality attributes or situational factors as causing the incident. Results indicated that students who were higher in self-monitoring were generally better interviewers but were more likely to make attributions that were biased. (Appendices include questions used to make up the self-monitoring scale and handouts given to the control group.) (HOD)

Descriptors—*Advertising, Comparative Analysis, Institutions, *Job Satisfaction, *Job Skills, Media Research, Occupational Mobility, *Occupational Surveys, Organizational Communication, *Organizational Effectiveness, Socialization

Identifiers—*Account Executives, *Advertising Industry

Qualitative interviews and field observation were used in a study that examined the duties, satisfaction, organizational constraints, and career pathways of advertising agency account executives. In addition, the study compared the personnel functions of two different agencies—one large and one small. Results showed that the functions of account executives varied with agencies. In the small agency, the executive was likely to perform many functions, while in the large agency the executive performed more specialized duties. Executives in both agencies tended to be the more mature members of the staff and to possess a high level of knowledge of advertising in its processes. They often had been trained carefully by the agencies in the areas of media, research, and other fields before becoming executives. The executives tended to credit "luck" with getting jobs, the luck including having the right contact at the right place. There seemed to be no way of getting into the field without a college degree, and most agency personnel were hired directly upon college graduation. In general, the findings support the notion that the organizational system is important for adult socialization and career mobility. Furthermore, the complexity of the organization tends to lead the individual workers to be more competitive, constrained, and impersonal in their relationships with other workers. (FL)

Identifiers—*Journal Writing

In order to give students an opportunity to personalize their learning through writing, two teachers of a high school American civilization class designed a biographical scrapbook project. The project objectives were to have students read about one person significant in the development of United States history and literature of the Revolutionary era, to collect specific information necessary to a biographical understanding of that person, to recognize and summarize the contributions of that person to United States history and literature, to convey information through various methods within a scrapbook format, to write both creative and expository articles, and to compile a bibliography. The following types of scrapbook entries had to be included: a birth certificate; diary entries or letters; newspaper articles; sermons, speeches, or essays on a specific topic; an obituary and epitaph; a time-line; a Who's Who entry; and a lead to a speech introducing the historical figure. An interview with one of the students revealed that the student had to think like the character in order to write like him. The student also wrote the least complex entries first. For other entries, the student had to imagine herself in a different time and place and assume the roles of authors different from herself. Clearly, writing history rather than writing about history can help students learn about both writing and history. (HOD)

Identifiers—*Britton (James), *Speaking Writing Relationship

According to James Britton, too much emphasis is being placed currently on revision. In his essay, "Shaping at the Point of Utterance," Britton notes that (1) concentrating on the reader in teaching writing can disturb the writer's ability to formulate what he or she wants to say; (2) the essence of the writing process is not writing something to be cleaned up later, but rather creating connections between ideas; (3) a precise and explicit mastery of the rules of writing can obstruct effective writing; and (4) writing develops in a complex relationship to speech and not by a process of differentiating between spoken and written discourse. This information conflicts directly with some of the basic principles that underly many composition texts and teaching models. Britton also states that the basic force of writing comes less from the effort to persuade a reader and more from the effort to articulate the writer's experience. This suggests the great value in writing instruction of using very frequent short writings, emphasizing validation through the writer's experiential knowledge, and staying aware of the close relationships between writing and speaking and between writing and learning. Identifiers—PF Project

During a visit to a local library archives, many old photographs were discovered which turned out to be useful teaching tools for an English class. Copies of a few of them were brought to class where students were asked to choose one and write about it. The responses were exceptional. Students were writing about their town; some of them were writing about their ancestors. Digging around for useful archives became a hobby. Students were brought along on these archival searches which included viewing old newspapers preserved on microfilm. A variety of activities were developed from the news stories and pictures that were found. Students began to discover themselves, their town, and the past. The variety of things available in city, university, or state archives is phenomenal. Although the news stories and pictures were used on an occasional basis, they could have been grouped together into a unit. Archival materials can be a positive and enjoyable alternative to published textbooks. (DC)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Higher Education, High Schools, Learning Activities, *Paragraph Composition, Puzzles, Sentences, *Sentence Structure, *Writing (Composition), Writing Exercises

Identifiers—PF Project

This exercise is intended to teach the sense of sentences and their place in the larger fabric of paragraphs as they are woven into organized papers. Based on the five-paragraph theme (introduction, three body paragraphs, and conclusion), the exercise divides "What I Have Lived For," the prologue to "The Autobiography of Bertrand Russell, 1872-1914," into 18 sentences which are presented to students in random order. The goal is to have students put the sentences into their proper order

which includes grouping them into five paragraphs. The summary states that, in order for students to successfully solve the puzzle, they must pay more attention than usual to key words on which sentences and paragraphs turn and to structural elements in sentences. The correct order of the sentences and a copy of "What I Have Lived For" are included. (DC)

Journal Cit—Exercise Exchange; v28 n2 p21-22 Spr 1983

Pub Type—Guides - Classroom - Teacher (052) — Journal Articles (080)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Higher Education, High Schools, Learning Activities, Rhetoric, Teaching Methods, Writing Exercises, *Writing Instruction

Identifiers—*Free Writing, *Persons, PF Project

Freewriting is an effective means of teaching students how to develop persons in writing. One approach is to have students imagine that they are inanimate objects or nonhuman creatures, provide them with a specific situation or environment, and ask them to freewrite for five to ten minutes. Another slant is to have them become famous historical figures facing a famous historical event. If it is accepted that the personal appeal of the speaker/writer is the strongest means of persuasion, then it is important to teach students how to create such appeals. After letting students experiment with persons through freewriting, it is easy to plug the concept of persons into an overall rhetorical scheme. This can be done by requiring students to establish in one of their essays a persona that is something other than themselves. Freewriting is no rhetorical panacea; however, it is a way to give students "hands on" practice. (DC)

Identifiers—PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: LEVEL: High school and college. AUTHOR'S COMMENT: Many would like to abandon the distinction between "lay" and "lie," but I still receive enough questions about it to continue teaching it. Finding that students did not believe me when I taught them to substitute "recline" for "lie," because "The rug reclines on the floor" sounds silly, I decided to work out a new lesson. The verb "to be" is a perfect substitute for "to lie" and even saves words: "The book is lying (being) on the table" shortens to "The book is on the table." "Lying" like "being" is often superfluous. FIRST LESSON: Of course, I start with the easier "lay" and use "place" for its substitute because the "d" is a perfect clue: "laid" must always mean "placed." Thus the principal parts: present tense-lay (place); past tense-laid (placed); past participle-laid (placed); present participle-laying (placing). Substituting "be" for "lie" is more complicated because "be" has many forms: (1) Present tense-I lie (am); you, we, they lie (are); she, he, it lies (is); and (2) Past tense-I, she, he, it lay (was); you, we, they lay (were). The past participle is easy because "lain" always equals "been" with the "n" for a perfect clue. The present participle "lying" always equals "being." SECOND LESSON: I warn against clichés and slang. Instead of "lay off," they must use "avoid"; instead of "laid back," they must choose "relaxed." The only ambiguous usage is that with land: dictionaries allow both "lay of the land" and "lie of the land"; but I can explain both. "Lay of the land" refers to nature's having placed it, and "lie of the land" means the way the land is. Although I usually complain about sports language, golfers are good here: the ball has a good or bad "lie." I caution students not to think about whether a sentence discusses placing or reclining; rather the secret is to

this junior high level activity involves students in creating a dream person using magazine or catalog pictures and then writing a biography of this person. Materials include teacher notes, follow-up suggestions, evaluation procedure, and a four-step student direction sheet. (LP)

Identifiers—PF Project

Developed for teachers of elementary and junior high school students, the "Literature at Home" program is designed to stimulate recreational reading and to enrich the regular classroom reading curriculum. Lesson plans include synopses, vocabulary lists, short-answer questions, activities (including many writing activities), and projects for 36 books chosen for their high literary quality and interest to students. It is suggested that one book may be read by the entire class or that individual titles may be selected by student groups according to reading abilities. The program is divided into two sections. The first section, for elementary grades, contains lessons for 12 books with reading levels for grades three to nine. The second section, for junior high school grades, has lessons for 24 books with reading levels for grades four to nine. (EM)

Identifiers—*National Conference on Research in English

Spanning the years 1932-1982, this book details the history of the National Conference on Research in English (NCRE) in terms of members' activities, research directions taken, and accomplishments. The first section of the book, "The Founding," reviews the initial efforts to establish the organization; examines its early programs; discusses the role of C. C. Certain in promoting the organization; describes its first publication, "A Handbook of English for Boys and Girls," published in 1939; and traces the evolution of the journal "The Elementary English Review," later "Elementary English." The second section, "The 1940s," continues the history from the death of Certain in 1940, discussing the activities of the organization during the years of World War II, its proposals for its merger with the National Council of Teachers of English (NCTE), and the publications of its bulletins. The third section, "The 1950s and 1960s," covers the "heyday" of the organization, reviewing its important meetings and large research efforts, The First Grade Reading Studies and The Teacher Effectiveness Study. The fourth section, "The 1970s," describes NCRE's efforts to engage the membership in cooperative research, discusses the Cooperative Research Committee, and examines attempts to expand membership, while the final section "And Now, What Next?" takes a look at the future of NCRE and offers comments from various past and present members of the organization. Identifiers—*Freshman Composition

The six evaluation instruments recommended by the Committee on Teaching and Its Evaluation of the Conference on College Composition and Communication (CCCC) were modified to evaluate a large freshman writing program taught by inexperienced instructors. As course goals were clearly stated in the instructor's guide and repeated in orientation and training sessions, one instrument—the determination of standards for judging writing—was eliminated. The program's large size and the instructors' apprehension over being evaluated also militated against three other instruments—the evaluation of teacher commentary on papers, classroom observation, and assessment of writing assignments. The program evaluation, therefore, consisted of revised versions of teacher and student questionnaires. Results revealed some divergence between stated program goals and actual practice, with less time being given to prewriting, invention, and revision than was recommended. The greater stress placed on the writing process by teachers trained in the new apprenticeship program, however, indicated that the apprenticeship approach helped in the course's transition from product to process orientation. A disparity between student and teacher assessments of writing improvement indicated the need for fuller communication of goals. Although using only two instruments, the evaluation did produce significant new information on the program's effectiveness. (Evaluation instruments are appended.) (MM)

Descriptors—Academic Achievement, Age Differences, Comparative Analysis, Distinctive Features (Language), High Schools, *Linguistic Theory, *Research Methodology, *Sentence Structure, *Structural Analysis (Linguistics), Writing Instruction, *Writing Research, Writing Skills

Identifiers—T Units, *Writing Functions

Microresearch of the type performed by W. Loban and K. Hunt was used to describe two functions of macroresearch methodology—reporting and classifying—the type conducted by J. Britton. This was done by contrasting the use of nine linguistic features of writing produced by four groups of students in each of the functions. The features were t-units, adverbial clauses, adjectival clauses, markers of tentativeness, abstract nouns, and four categories of "free modification" (words or phrases set off from the rest of the t-unit by commas). In addition, the study also examined differences between students at different achievement and grade levels. Subjects were borderline-pass and very successful students in grades 10 and 12. The writing was first draft and the audience was the teacher. The results showed that students felt more free to modify loosely, by adding or interrupting or prefacing, the core of their writing when reporting than when classifying. The latter function seemed to call for closer concentration and tighter statements. On the other hand, students tended to limit their cognitive involvement as measured by the linguistic features in that they used shorter t-units, less tentativeness, fewer abstract nouns, and fewer clauses of concession and condition. (Excerpts from two students')

writing efforts are included in the paper.) (FL)

Style in Rhetorical Context: Aristotle's Four Virtues of Style and Stylistic Theory and Practice.

Pub Date—Mar 83

Note—19p; Paper presented at the Annual Meeting of the Conference on College Composition and Communication (34th, Detroit, MI, March 17-19, 1983).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Language Styles, Language Variation, *Literary Devices, *Models, *Rhetoric, Rhetorical Criticism, Writing Instruction, Writing Processes, Writing Research

Identifiers—*Aristotle, *Rhetorical Theory

Aristotle's four virtues of style—clarity, propriety, dignity, and purity—can serve as a useful model for teaching and for research in linguistic style. These virtues reflect the writer's careful consideration of the subject, the audience, the writer's voice, and the linguistic community for the writing. Unfortunately, these virtues have fallen out of favor because their applications throughout history have been uneven and their uses have at times become abuses. In different periods of rhetorical history, over-zealous enthusiasm has elevated one characteristic of style to the virtual neglect of the others. However, the very fact that this framework can be used as a way of understanding the shifting tides of taste in the history of style demonstrates its value for identifying the emphases of particular theorists. If one examines the most persistent stylistic abuse of the twentieth century, the "official style," and the virtue of style most frequently cited in defense against it—clarity—one can see the value of the four virtues as correctives to the tendency to define stylistic focus too narrowly. Brain Research and the Language Arts.

Pub Date—[83]

Note—36p.

Pub Type—Information Analyses (070)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Cerebral Dominance, Cognitive Ability, *Cognitive Processes, Cognitive Style, *Creative Activities, Elementary Secondary Education, *Epistemology, *Language Arts, *Learning Modalities, Literature Appreciation, Reading Instruction, Writing Instruction

Basic research into the mechanisms and functions of the brain carried out in the past 25 years has provided evidence that humans do, indeed, experience two ways of knowing. More recent research has explored the nature of the apparent perceptual bias—or way of knowing—of each brain hemisphere, and this information, which has changed thinking about the brain, has profound implications for all educators. A review of research confined to the procedures applied by the brain in processing materials specific to the language arts yields a number of implications for teachers in that field, including the following: (1) all materials should be presented as a whole and as parts of a whole; (2) less material should be covered, allowing students to approach the concepts using as many modalities as possible; (3) students should be allowed to explore new processes and ideas and to play with ideas; (4) reading and writing activities should be extended to include informal conversation, rhythmic and physical interpretations, and creative dramatics activities; (5) new associations between ideas should be encouraged, and their expression rewarded; and (6) literature rather than basal readers, should be the choice of materials for all language arts activities. (FL)

Identifiers—Reading Writing Relationship, Theory Practice Relationship

Twenty countries are participating in the IEA International Study of Written Composition, for which this is a background report. school-based writing in particular, this report discusses the functions of writing from the point of view of culture, cognition, and child development. It also presents a usable model for constructing and evaluating writing curricula, writing tasks, writing instruction, and textbooks. Covering the domain of writing in its first section, the report discusses the following topics: (1) the origins of writing, (2) the cultural and cognitive impact of writing, (3) the functional relationship between spoken and written language, (4) differences between conversational interactivity and written composition, (5) writing as an act of communication, (6) writing as a cognitive process, (7) the development of writing, and (8) writing in a cultural context. The second section presents a general approach to school-based writing and a model of written discourse and then discusses factors related to school writing: educational objectives, the progression of writing tasks, and rating criteria. Following a conclusion, the report lists extensive references. An abstract and a price list of previous IEA reports are appended (in Finnish); there is also a Finnish version of the Introduction. Descriptors—Age Differences, Cognitive Processes, Elementary Education, Evaluation Methods, Research Methodology, Revision (Written Composition), Self Evaluation (Individuals), Writing Evaluation, *Writing Processes, *Writing Research

Identifiers—Audience Awareness, *Protocol Analysis

A study investigated differences in writing processes among second year (age 10) and fourth year (age 12) English school children using a modified protocol procedure thought to be less distracting to the writing process. Four children from each grade level wrote a descriptive paper, and their spontaneous comments during the writing period were tape recorded. Each utterance was then placed into one or more of 22 categories, and each paper was rated on a 5-point scale for content, organization, and surface elements. Results indicated that students from the two age levels wrote passages of roughly equal length and averaged the same number of comments (23). The most frequent comment category was "reviewing own experience," followed by "immediate planning." The children did not often engage in major revision of their writing; however, changes in the children's thinking process from age 10 to age 12 may play an "enabling" role in revision. Specifically, comments appeared in the 12-year-old student's protocols suggesting an awareness of paper characteristics or qualities, including effect on audience. The results suggest that protocol procedures are an effective tool for investigating children's writing, and that detailed scoring categories may make the technique effective for testing hypotheses as well as generating them. Kelly, Kathleen

We Have Met the Audience and It Is Us: Teachers as Audience in the Composition Class.

Pub Date—Mar 82

Note—18p; Paper presented at the Conference on College Composition and Communication (33rd, San Francisco, CA, March 18-20, 1982).

Pub Type—Opinion Papers (120) — Guides - Classroom - Teacher (052) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Audience Analysis, Higher Education, Prewriting, Revision (Written Composition), Rhetoric, Rhetorical Criticism, Secondary Education, Student Teacher Relationship, *Teacher Role, *Writing Instruction, Writing Processes

Identifiers—*Audience Awareness

Teachers' role as primary audience has important implications for writing instruction. Teachers represent a combination of two audiences: a literal audience—a specific person or group of people implied in a writing assignment—and an ideal audience shaped by the writers themselves. As these two general types of audiences imply, writers both create and are created by their audience. Their choice of genre also reflects the internal and external pressures at work during the writing process. By providing direction in writing assignments and offering help in invention and revision, teachers can aid students in establishing a hypothetical dialogue with the audi-

ence. When teachers ask questions that help students to define their audience, for example, they ensure more successful revisions of papers. In helping to define what are acceptable and significant audiences, teachers determine how engaging students' writing will be. (MM)

Bolz, Sigmund A. Loughrin, Patricia L.
Teaching Writing is More Complicated than Handing Out the Paper.

Pub Date—[83]

Note—17p.

Pub Type—Opinion Papers (120) — Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Assignments, Elementary Secondary Education, *Interaction, *Models, *Performance Factors, Student Responsibility, *Student Teacher Relationship, Teacher Effectiveness, Teacher Responsibility, *Writing Instruction, *Writing Processes

One proposed model of the writing process describes writing as a dynamic, three dimensional, interactive process. It is dynamic in that it changes in intensity proportionate to the sophistication of the student and the teacher. It is three dimensional and interactive because, similar to the gears within a clock, it is composed of a number of smaller, dependent processes that continuously interact with and support one another. These dependent processes are the teacher, the teacher's responsibilities, the student, and the students' responsibilities, all of whose interactions are facilitated through the assignment. If the instructor's teaching style is affected by positive elements, then the teacher will most likely be effective in implementing the responsibilities of organizing, stimulating, focusing, conferencing, assessing, and diagnosing. Unlike teacher responsibilities, student responsibilities do not represent clearly defined, distinct stages but encompass rehearsing, drafting, evaluating, revising, editing, producing, and presenting. The last major component in the writing process model is the assignment, the communicative link between teacher expectations and student performance. When students know the objectives, receive direct instruction concerning the objectives, understand how the assignment will be evaluated, and have the prerequisite skills to handle the new challenge, teachers can expect positive results. Descriptors—Audience Analysis, Education Work Relationship, Elementary Secondary Education, Higher Education, Teaching Methods, Textbook Evaluation, Writing (Composition), *Writing Exercises, *Writing Instruction, *Writing Processes

Identifiers—*Audience Awareness, *Persona
In the "real" world of writing, people make writing decisions based in part on their analyses of audience expectations and their own purposes. Yet, composition teachers at all levels assign general or abstract topics for essays rather than create writing tasks that require students to reflect on target audiences. Even students are aware of the kinds of audiences and purposes they are likely to encounter beyond the classroom: the audience, purpose, and persona are essential parts of any writing task. Although many traditional textbooks offer little guidance to students or teachers as to how these elements figure within the writing process, a number of new books view the problem as central, including "Successful Writing" by Maxine Hairston and "Writing to Communicate" by Maureen Taylor. It is possible to create classroom writing tasks that force students to consider audience, purpose, and persona. However, helping students learn to invent and intervening in their writing process to promote invention and development are also part of teaching audience awareness. (A sample assignment that allows students to choose from lists of topics or purposes and audiences is included.) (HTH)

Descriptors—Assignments, *Creativity, Discussion (Teaching Technique), Pictorial Stimuli, *Poetry, Resource Materials, Secondary Education, Teaching Methods

Identifiers—*Concrete Poetry, PF Project, *Word Formation

Teaching suggestions and questions on which to build a class discussion are presented regarding concrete poetry. An example of a poem about a bird's feather in which the words are arranged in the shape of a feather is included and is intended as a student handout. In addition to suggestions for student assignments, five sources of concrete poetry conclude this brief article. (JH)

Descriptors—Check Lists, *Competition, Elementary Education, Guidelines, Intermediate Grades, *Planning, Regional Programs, *Spelling, State Programs, *Word Lists

Identifiers—California, *Contests, PF Project, Rules and Regulations, *Spelling Bees

This two-part document contains a spelling word list compiled by the Sonoma County Superintendent of Schools (California) for use in the California State Elementary Spelling Championship competition, along with information for planning and conducting spelling bees. The spelling word list (also intended for use in the regional competitions) is a compilation from various sources such as "Word Wealth," "Gateways to Correct Spelling," "Spelling and Word Power," "The 365 New-Words-a-Year Calendar," and several magazines. The spelling bee planning material includes contest rules and regulations; additional explanations of applications of some of the rules for the judges' information; guidelines for conducting a spelling bee with a suggested agenda; a model for planning including obtaining sponsors, scheduling the preliminary and final events, and selecting the judging team; planning room "psychology" (room layout); a sample news release; and a four-page checklist for organizing the contest. Identifiers—*Theory Practice Relationship

The first volume of a three-volume study on the relationship between writing research and instruction, this report is divided into three sections covering discussions among researchers, practitioners, and instructional experts; studies of writing research; and instructional applications. The first section describes a series of five research/practice conferences on the following topics: (1) the major

areas of writing research, (2) the relationship between language and writing among nonstandard English speakers, (3) communicating writing research to interested audiences, (4) computers in composition instruction, and (5) writing as a job skill. The second section presents an annotated bibliography of literature studies, summaries of research on the composing process and on research methodology, and a paper on applying writing research. The final section describes two instructional components: a filmstrip on helping students improve the quantity and quality of their writing and two prototype composition units suitable for use at the beginning of the third grade. Identifiers—*Theory Practice Relationship

The second of three volumes on the relationship between writing research and instruction, this report first describes a 1982 conference on writing policies and problems sponsored by the Educational Research and Development division of the Southwest Regional Laboratory (SWRL) and the California State University, Long Beach. The second section reports on a series of staff development workshops in written composition which reviewed the results of a student writing skill survey, presented a general view of the composing process and of writing instruction, and discussed specific writing problems among students in grades 2 and 3 and grades 5 and 6. The third section contains three issues of SWRL's "Instructional Improvement Digest" on teaching students to revise, teaching sentence structure and versatility, and increasing student writing quality and quantity without increasing the teacher's paper load. The final section contains four reports on the following spelling-related topics: regularity and irregularity in spelling and spelling instruction, the occurrence of selected features in elementary school spelling texts, the relative frequency of homophones in children's writing, and the use of the Proficiency Verification System (PVS) to assess students' regular spelling development. This last report includes copies of the prototype materials. (MM)

Identifiers—Theory Practice Relationship

The last of three volumes studying the relationship between writing research and instruction, this four-part report focuses on writing assessment. The first section details specifications for an instrument assessing student writing samples and the following composition skills: word processing, sentence processing, paragraph development, organizational

skill, use of dictionary and reference sources, spelling, and writing mechanics. It also reports on the administration of such an assessment instrument to students from grades 1 to 6 in the Los Angeles Unified School District. The second section discusses specifications for competency based assessment of the following language arts skills: (1) listening, (2) grammar usage, (3) sentence structure, (4) capitalization and punctuation, (5) language expression, (6) spelling, (7) literature, and (8) study skills, media literacy, and nonverbal communication. The third section briefly describes the reading, mathematics, and language proficiency surveys and review exercises administered to entering high school students in the Sacramento City Unified School District, and the final section presents an annotated bibliography of assessment reports. Intended to help elementary school language arts

teachers provide students with opportunities for unprescribed writing according to a natural writing process, this booklet discusses research and practice in the writing process and creating a supportive classroom environment. The first part of the booklet examines theory and research on the stages and fluctuations of the writing process, the use of memory in invention, the rewriting process, and writing interests and attitudes. The second half of the booklet explores ideas and suggestions for discovering when extra writing time is needed and by which students, and ideas for incorporating more off-stage thinking time into the language arts curriculum. Identifiers—Reading Writing Relationship, Teacher Student Conferences, *Writing Programs

The seven chapters of this book describe the process conference approach to writing instruction. The first chapter presents four principles used in this approach: adequate daily practice time, student control over and responsibility for writing, emphasis on the writing process, and frequent brief conferences between teacher and students and among peers. The second and third chapters discuss frequent problems in implementing the program and effective classroom management strategies, while the fourth describes different types of conferences. The fifth chapter discusses the different parts of the writing process, suggests how to incorporate work with punctuation and spelling into the program, and evaluates publishing aims and methods. The sixth chapter considers the impact of the writing program on other areas of the curriculum, citing improved student reading skills, a greater integration of the language, and increased student responsibility for

learning. The final chapter discusses various methods of evaluating the writing program and suggests ways of keeping parents informed. (MM)

Identifiers—Reading Writing Relationship, *Saint George Writing Project (Australia), Teacher Student Conferences, *Writing Programs

Divided into a major kindergarten to second grade section and a smaller primary school section, this book uses the comments of the elementary school teachers involved to describe the St. George (Australia) Writing Project's conference approach to teaching writing. Following a brief description of this approach as featuring adequate daily practice time, student control over and responsibility for writing, emphasis on the writing process, and frequent brief conferences between teachers and students and among peers, the two sections each cover the following topics: (1) developing the project; (2) early classroom experiences with the new approach; (3) classroom organization; (4) using the writing conference effectively; (5) accommodating different activities—choosing topics, drawing, inventing spelling, creating drafts, and preparing for publication—during the writing time; (6) publishing the writing; (7) programing and evaluating the process writing approach; and (8) discovering additional benefits of the conference approach such as greater student involvement in learning, fewer behavior problems, and improved reading skills. Identifiers—*Journal Writing, *Writing Programs

An Oregon school implemented a program of journal writing in grades 5 to 8 and evaluated its effects upon the language arts curriculum and students' writing ability. Each of the 11 teachers in the project decided the amount of time to allocate to journal writing and the routines to establish, although all followed certain guidelines on confidentiality, daily feedback, and students' choice of topic. Questionnaires and interviews with the teachers at the end of the school year indicated that most attempted to respond in writing to students' journals regularly, but only two teachers responded daily; many found the task of responding to be a very heavy burden. Teachers reported obtaining useful diagnostic information from students' journals but very few used this information for establishing instructional priorities or teaching needed skills. Over the period of nine months every journal writing class showed gains in spelling performance ranging from slight to almost two years. Over the nine months, the total group also made modest gains in general writing ability, and the lower ability groups

made substantial gains. In addition, the journal writing program positively influenced student scores on language usage tests. (HTH)

Descriptors—*Administrator Attitudes, *College Faculty, Educational Research, Higher Education, Occupational Surveys, *Part Time Faculty, *Shared Services, Teacher Administrator Relationship, Teacher Employment, *Teaching (Occupation), *Writing Instruction

The English department administrators for five colleges and universities in a midwestern metropolitan area were surveyed for information on the hiring of part-time faculty. The survey determined the proportion of part-time composition instruction to the total hours of composition instruction for each institution and the proportion of "cross-town" instruction (part-time teaching at more than one institution during a term) to the total part-time composition instruction. Contrary to the researchers' predictions, the results indicated the following: (1) the phenomenon of cross-town teaching was not widespread; (2) most cross-town adjunct faculty taught at only two institutions; (3) there were several distinct pools of faculty members from which specific schools hired, rather than one large pool; (4) the administrators surveyed were extremely cooperative in supplying the names of their part-time faculty; and (5) the administrators did not place constraints on their part-time faculty by limiting the number of institutions at which they could teach in any given term. The results suggest that cross-town teaching poses no problem for administrators. (HTH)

Descriptors—*Computer Assisted Instruction, Computer Programs, Consumer Education, Higher Education, *Microcomputers, Teaching Methods, *Word Processing, *Writing (Composition), *Writing Instruction, Writing Processes

With the advent of composition software, the microcomputer has become a valuable writing and teaching tool. In "Writing with a Word Processor" (Harper, 1983), William Zinsner details the trauma he experienced in the shift from being a pencil and paper writer to being a computer writer. However, those accustomed to composing at a typewriter will have less difficulty. When buying a personal computer for home or school use, the teacher should shop around and talk with other computer owners to find the machine and software best suited to the writers' needs. There are five steps to becoming a "computer expert" before buying: (1) sit down and become familiar with the computer, (2) meet with people who know that model of computer well, (3) learn computer jargon and lingo, (4) read computer related articles in computer magazines and professional journals, and (5) ask what the computer can do for specific writing needs. Descriptors—*Advertising, Audience Analysis, Content Analysis, *Critical Thinking, Mass Media, *Mass Media Effects, *Persuasive Discourse, *Propaganda
Intended for any consumer who wishes to be informed and on guard against the persuasive tactics of the media, this book presents a method for analyzing and understanding the basic pattern of persuasion in commercial advertisements. The first chapter explains why it is important and useful to develop this critical skill. The next five chapters explain the five-part superstructure of an advertisement: attention-getting, confidence-building, desire-stimulating, urgency-stressing, and response-seeking. These are followed by a 30-second spot quiz applicable to advertisements, and an explanation of the intensify/downplay schema. The remaining three chapters contain questions to ask about any ad, a reference guide for common products and services based on the intensify/downplay schema, and a brief list of advertising expenditures for some well-known companies. Identifiers—*Speaking Writing Relationship

One hundred college remedial writing students participated in a study designed to (1) demonstrate some of the differences between speaking and writing in a controlled situation; (2) test the hypothesis that the writing of subjects who have spoken about a particular topic will be qualitatively superior to the writing of those who have not; and (3) determine the degree of semantic transfer from prior speaking to subsequent writing on the same topic. Divided evenly into experimental (speak/write) and control (write only) groups, all subjects watched a film as stimulus for writing. The experimental subjects were interviewed individually on the subject of the film, the conversations were tape recorded, and students were asked to write a 30-minute essay on a general

topic generated by the film. The control subjects were given the same instruction but were asked only to write the 30-minute essay. Essays were evaluated for quantifiable variables (words, T-units, subordinate clauses, and propositions) and judged holistically. Results indicated that the speak/write technique proved beneficial to the writing of the experimental subjects. Not only did their fluency in the use of certain quantifiable variables prove to be greater than that of the control group, but judged holistically their essays were of higher quality in terms of sophistication and number of ideas expressed, development, and organization. In addition, the prior oral exposition stimulated thinking and facilitated organization. (Appendix contains instructions for evaluators and extensive excerpts from oral transcripts and corresponding essays.) (HOD)

Descriptors—Higher Education, *Individualized Instruction, Learning Modules, *Literature Reviews, Models, Peer Teaching, Program Descriptions, *Program Effectiveness, *Research Needs, Research Problems, *Writing Instruction, *Writing Processes

Identifiers—*Writing Laboratories
A review of the literature on individualized instruction in writing centers and other places reveals several histories, theories, and rationales for such instruction. Suggested models of instruction emphasize the progress of the individual through conferences, individualized assignments, high levels of peer interaction, and grade negotiation. The best programs are identified as those that offer an eclectic, inductive, team-designed approach to teaching composition, focusing on writing as an ongoing learning process. The worst programs are considered to be those focused on grammar and mechanics and those that are machine or program centered. Despite the many advantages that have been credited to individualized instruction, a number of objections have also been raised, including isolation from peers, superficial individualization and a fragmented presentation of modules. The number of studies that have examined the effectiveness of individualized instruction yield no consensus since many of the studies are flawed in design and inconsistent in their results. In fact, the bulk of the literature concerning individualized, self-paced or auto-instructional writing courses is subjective and highly interpretive, suggesting a need for further studies of the effectiveness of individualized and classroom modes of instruction. Descriptors—Classroom Techniques, *English Instruction, *Group Discussion, Literary Criticism, *Literature Appreciation, Peer Evaluation, *Questioning Techniques, *Reader Response, Revision (Written Composition), Secondary Education, *Writing Exercises

Identifiers—Coup de Grace (Bierce), Death of the Ball Turret Gunner (Jarry), Reader Text Relationship, Red Badge of Courage

Reflecting the reader-response theory of literature—a theory suggesting that literature is made dynamic through interaction between reader and text—this report presents ways of extending high school students' imaginative grasp of human experience. Using three works—Randall Jarrell's poem, "The Death of the Ball Turret Gunner," Ambrose Bierce' short story, "The Coup de Grace," and Stephen Crane's novel, "The Red Badge of Courage"—this report shows how reading, discussing, and writing on these works can help students connect literary and personal experiences. It suggests that discussion should begin only after the entire work is read and that teacher questions, whether aimed at comprehension or personal reactions, should serve as starters for exploration rather than occasions for

testing recall or attentiveness. Furthermore, the report suggests that student writing, from initial draft, to sharing with peers, to final revision, should help students relate experiences in the novel with their own lives. (MM)

Descriptors—Acculturation, *Communication Problems, *Culture Conflict, *English (Second Language), Foreign Students, Higher Education, *Intercultural Communication, Professional Associations, Standard Spoken Usage, *Student Teacher Relationship, Teacher Effectiveness, *Teacher Role, Teaching Methods, Workshops
Identifiers—*Nonnative Speakers

Teaching native and nonnative English speakers together in the same classroom can be accomplished well only by a teacher who is sensitive to the concerns of the nonnative students. Personal interviews conducted with nonnative speakers indicated that the most recurrent out-of-class problems include separation from friends and family, distinctions between British and American English, and telephone conversations. Classroom problems include teachers who fail to articulate, have nonstandard accents, or neglect to emphasize the main points. Differences between textbook English and spoken usage, as well, in some instances, as the culture shock of seeing women in a position of authority in the classroom, can also provide interference. Teacher efforts to resolve these problems include articulating clearly and clarifying material, being aware of the difficulties posed by slang, and recognizing the differences between British and American dialects. Workshops for nonnative speakers and teacher involvement with professional societies can also be of great help. (HTH)

Identifiers—National Commission on Excellence in Education

Containing 13 essays selected from teachers at many levels and from specialists in various branches of the English profession, this journal issue provides English teachers with the opportunity to answer the many charges currently being levelled at education. The opening article highlights the issues raised by the report of the National Commission on Excellence in Education. This is followed by two commentaries on excellence in education, its goals and obstacles. The next essay urges teachers to make the public aware of the importance of their task and the centrality of their role as humanitarians. An essay on basic education questions whether the three R's are sufficient for the survival and full-growth potential of individuals in today's society. Another article warns English teachers against spreading themselves too thin. One contributor suggests that the educational priorities of our nation must be reevaluated.

ated, and states that education should be a privilege earned through capability and a desire to excel. Overcoming roadblocks in the composition classroom is the topic of another article and the responses of some college freshmen to "A Nation at Risk: The Imperative for Educational Reform" are summarized by one educator. The remaining articles survey a variety of obstacles that stand in the way of English teachers' performance—from an unresponsive American public to unreasonable class sizes. (HTH)

Descriptors—Attitude Measures, *Educational Research, *Inservice Teacher Education, Locus of Control, Models, *Program Evaluation, *Role Playing, Self Concept, Self Concept Measures, Staff Development, *Teacher Attitudes, Teaching Experience, Training Methods, Writing Apprehension, *Writing Instruction

A study investigated the effect of two staff development models—role playing and open instruction—upon teachers' self-awareness and attitudes toward inservice education. In a 2x2x2 design for analysis of variance, 27 composition teachers were randomly assigned, stratified by years of experience, to two parallel but contrasting summer workshops. In assessing self-awareness, teachers rated themselves on 18 variables of group interaction. These self ratings were then correlated with those of the course instructor and a randomly selected anonymous peer, and the mean ratings of the peer evaluation. A 33-item, three scale program evaluation was administered to assess attitudes toward inservice manner or presentation, usefulness to teaching, and usefulness to consulting. Among the findings were the following: (1) role playing as a technique for training agents of change appeared to be more effective than the open instruction method, except that it may have caused participants and instructors to have similar perceptions of group process; (2) more experienced teachers tended to benefit more from inservice education than did teachers with less experience; (3) teachers of low writing apprehension tended to benefit more from inservice education than did teachers of high apprehension; and (4) teachers with an internal locus of control appeared to benefit more from inservice education than did teachers with an external sense of control. Descriptors—Child Development, Child Language, *Cohesion (Written Composition), *Developmental Stages, Grade 1, Grade 2, Kindergarten, *Language Acquisition, Longitudinal Studies, Primary Education, *Story Telling, Syntax, *Writing Readiness, *Writing Research

Identifiers—*Story Structure
Presenting a longitudinal study of factors influencing the text-forming strategies children employ in early stages of writing development, this report focuses on the differences between children's oral and written texts and the development of writing ability. The first two chapters present cohesion results, with the first chapter providing dictation and writing data for the grades 1 and 2 population and the second chapter presenting replication results comparing kindergarten-grade one and older population (grades 1-2) groups' cohesion in both dictation and writing. The third chapter discusses story structure results in terms of their theoretical significance and implications for writing development, while a fourth chapter integrates cohesion and story structure conclusions into an analysis of the transition to writing emphasizing patterns of development. Finally, the fifth chapter presents a case study

of the development of a kindergarten child's writing abilities. Appendices include (1) a description of study procedures, (2) cohesion MANOVAs by mode and grade for urban and suburban schools, (3) cohesion MANOVAs for school, mode and observation, (4) story structure MANOVAs in retelling dictation and writing at urban and suburban schools, and (5) a discussion of text length and syntactic complexity. Books Make Social Studies and Science Come Alive.

Pub Date—[82]

Note—16p.

Pub Type—Information Analyses (070)—Collected Works—General (020)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—*Books, *Children's Literature, *Content Area Reading, Elementary Education, Enrichment Activities, *Instructional Materials, *Reading Material Selection, Reading Research, Teaching Methods, Units of Study

Children's books can be used to expand knowledge and increase interest in the content areas. The social understanding that first and second grade students gain from a unit on family relationships and friendships will be richer if literature is an integral part of the instruction. Titles for such a unit might include "Charlotte's Web," by E.B. White, or Charlotte Zolotow's "Big Sister and Little Sister." For third grade students, books such as "Here Come the Dolphins," by Alice Goudy, or "The Frightened Horse," by Franklin Fussell can be used in a unit on the life cycles of animals. An excellent reference source for this science unit is the "Science and Children" journal, which contains annotated references of children's books on science. A unit on oceanography was used in a fourth grade classroom to evaluate the effectiveness of literature in a content area. After all students completed a unit based on the science textbook, the experimental group participated in literature-based supplemental activities, including slide-tape presentations based on the literature, developing murals, and participating in a panel discussion. The results indicated that just having access to the books, as did the control students, is not enough. The study underscored the value of using both fiction and nonfiction materials in a structured unit and planning activities that develop students' interest in books. (HTH)

Bertrand, Carol V.

Factors in Holistic Ratings of Children's Writing.

Pub Date—83

Note—12p; Paper presented at the Annual Meeting of the National Reading Conference (33rd, Austin, TX, November 29-December 3, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—*Cohesion (Written Composition), Correlation, Elementary Education, Grade 2, Grade 5, *Holistic Evaluation, *Predictor Variables, *Writing Evaluation, *Writing Skills

To investigate factors influencing holistic writing evaluations, writing samples from children in grades two and five were evaluated holistically by a team of teachers. Papers were rated from one, for a poorly written paper, to four, for an excellent paper at that grade level. Correlations were run between holistic ratings and both traditional variables—ideas, form, creativity, mechanics, and wording—and two new variables—expressiveness of language and cohesive harmony. Holistic ratings correlated significantly with student reading and language scores on the Metropolitan Achievement Test, the number of words in the student samples, and the number of errors per 100 words. The use of expressive language, measured by the number of unique modifiers, emerged as a significant variable. No significant correlation, however, was found between holistic ratings and cohesion harmony, indicating that chain interactions were not the best measure of overall writing quality. (MM)

Trends and Issues in English Instruction,

1984—Four Summaries.

Pub Date—83

Note—16p.

Pub Type—Information Analyses (070)—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Academic Achievement, Censorship, Computer Assisted Instruction, Computer Programs, *Educational Needs, *Educational Trends, Elementary Secondary Education, *English Curriculum, *English Instruction, English Teacher Education, Humanistic Education, Language Arts, Literature Appreciation, Mass Media, *Professional Associations, Teacher Effectiveness, Visual Literacy, Writing Instruction

Identifiers—Theory Practice Relationship

Summaries of trends and issues in the teaching of English that have been identified by four commissions of the National Council of Teachers of English are presented in this report. The first summary in the report, by P. Bryant of the Commission on Composition, stresses the need for prospective English teachers to be well-grounded in the techniques of writing as well as in a current knowledge of how students learn, raises the question of teaching academic discourse, stresses the role of writing in a core curriculum, and raises the need for quality software used with microcomputers in the teaching of writing. The second summary presented is by D. England of the Commission on Media and identifies the following concerns and issues: new ways of integrating media into the teaching of English, computer use skills relevant to English and the language arts, declining visualization ability as a result of visual media, and the effect of computers on student thinking skills. In the third summary, by E. Lundy, members of the Commission on Curriculum express concern over the role of the humanities in a healthy technological society, the need to support the development of sound writing instruction at all levels, and the need to support curricula built on the best of current theory and practice. The final summary offered is by D. Turner of the Commission on Literature and identifies eight trends and issues, among them the decline of student exposure to literature, school board insistence on the use of anthologies, growing censorship, and inadequate teacher training in literature. Newspaper Uses of Satellite Technology.

Freedom of Information Center, Columbia, Mo.
Report No.—FOI-487
Pub Date—Jan 84
Note—9p.

Available from—Freedom of Information Center, Box 858, Columbia, Missouri 65205 (\$1.00; quantity discounts available).

Pub Type—Information Analyses (070)**EDRS Price - MF01/PC01 Plus Postage.**

Descriptors—*Communications Satellites, Facsimile Transmission, Mass Media, *Newspapers, News Reporting, *Technological Advancement, *Telecommunications, Teleconferencing

Identifiers—Associated Press, Federal Communications Commission, New York Times, United Press International, USA Today, Wall Street Journal

Replacing slower mail service, satellite transmission now gives the newspaper industry a practical and almost spontaneous method for sending all kinds of information to any newspaper across the country. Unlike other communication industries, newspapers did not begin to make widespread use of satellite technology until 1979, when government regulation requiring expensive licensure for receive-only satellite dishes was lifted. "The Wall Street Journal," "The New York Times," and "USA Today" are three major newspapers employing satellite technology, the latter being a "national daily" newspaper—a format virtually impossible without satellite transmission. The two major news wire services, The Associated Press and United Press International, have moved rapidly to install receiving stations since deregulation of receive-only dishes, thus allowing them independence from and considerable savings over transmission through telephone facilities. This technology has also made possible the concept of transmitting newspapers into subscribers' homes through television. More efficient communication within franchise businesses and "videoconferencing" are also possibilities. The most significant advantages of using satellites for news gathering will be realized if technology continues to make satellite communications more portable and less expensive, although clarity of reception is no longer guaranteed since frequency coordination of signals is no longer under regulation. Descriptors—Academic Aptitude, *Cognitive Processes, College Students, Expository Writing, Higher Education, Models, Planning, *Research Methodology, Writing Improvement, *Writing Processes, *Writing Research, *Writing Skills

Identifiers—*Protocol Analysis

A research project was undertaken to (1) identify the major cognitive processes involved in expository writing, (2) test a model of the organization of those processes, and (3) identify teachable aids that could be used by poor and average adult writers to improve their writing skills. Subjects were expert and novice student writers at Carnegie-Mellon University in Pittsburgh, Pennsylvania. The research method employed was that of protocol analysis, with each student being asked to think aloud as he or she performed writing tasks. The resulting tapes were analyzed to discover the cognitive processes involved in writing and to develop a model of composition. The findings suggest the following: (1) there are important differences in the ways expert and novice writers handle the writing process, (2) many of the strategies employed by expert writers are teachable, and (3) one of the most promising areas for improving students' writing is in the art of planning. (Charts, tables of data, and excerpts from student protocols are appended.) (FL)

Coding the Composing Process: A Guide for Teachers and Researchers.

Spons Agency—National Inst. of Education (ED), Washington, DC.

Pub Date—84

Contract—NIE-P-79-0170

Note—103p.; Best copy available.

Pub Type—Guides - Non-Classroom (055)

EDRS Price - MF01/PC05 Plus Postage.

Descriptors—Behavioral Science Research, Behavior Rating Scales, Classification, *Classroom Observation Techniques, *Data Analysis, Data Collection, Elementary Secondary Education, Guides, *Research Methodology, *Research Tools, *Writing Processes, *Writing Research

Designed for teachers and researchers interested in the study of the composing process, this guide introduces a method of analysis that can be applied to data from a range of different cases. Specifically, the guide offers a simple, direct coding scheme for describing the movements occurring during composing that involves four procedures: teaching writers how to compose aloud, taping the composing aloud sessions, coding the tapes onto the composing style sheets, and analyzing the composing style sheet. The guide describes the style sheet as a tool to (1) reduce a lengthy composing tape to a chart; (2) introduce a coding system that can be replicated; (3) sort specific, observable behaviors into defined categories that make it possible to discern regularities and patterns within and across cases; (4) provide a way of determining how parts of the process relate to the whole; and (5) present the sequences of movements that occur during composing as they unfold. The first chapter of the guide provides a background of the writing process and discusses the purpose of the coding scheme, while the second chapter examines various methods and techniques of observing the writing process. The coding scheme is explained in the third chapter and applied to the composing process of one writer in the fourth chapter, and the final chapter examines some of the questions that guide research efforts to study the writing process. Current Trends: Writing Methods Courses for Prospective English Teachers.

Pub Date—[81]

Note—19p.

Pub Type—Reports - Research (143) — Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Course Content, Curriculum Evaluation, Educational Improvement, Educational Needs, *Educational Trends, *English Teacher Education, Higher Education, *Methods Courses, *School Surveys, *Teacher Education Curriculum, *Writing Instruction, Writing Processes, Writing Research

Forty-eight professors of English or education at state universities throughout the United States were surveyed to discover what concepts state institutions were emphasizing in English writing. The survey asked 10 preliminary questions about what writing courses were offered or required for prospective undergraduate English teachers and 13 questions about the writing methods courses. Responses, obtained from 32 professors (a 67% response rate), indicate that all but two of the institutions require two or more courses in writing or language for prospective teachers, and 15 universities require four to six courses in composition or language. However, only 20 institutions require a methods course on how to teach writing. Of those writing methods courses, 84% emphasize the process of writing including prewriting, writing, revision, and different methods of evaluation. The three areas treated least extensively in these courses are writing fiction, developing plans to teach writing in the classroom, and weekly writing assignments. These results suggest that at a time when colleges, universities, and employers are complaining about writing illiteracy, a thorough course to prepare teachers to teach their students writing skills is imperative. (Appended is a table summarizing the concepts most frequently emphasized in writing methods courses.) (HOD)

Incorporating the Microcomputer into the Traditional English Classroom.

Pub Date—Oct 83

Note—14p.; Paper presented at the Annual Meeting of the Northeast Regional Conference on English in the Two-Year College (18th, Atlantic City, NJ, October 13-15, 1983).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Computer Assisted Instruction, Educational Trends, Elementary Secondary Education, *English Instruction, Higher Education, *Microcomputers, Prewriting, Revision (Written Composition), Teaching Methods, Word Processing, Writing Exercises, *Writing Instruction

Identifiers—Invention (Rhetorical)

The incorporation of microcomputers into the traditional English classroom is currently in a transitional phase. Each new use of the computer affords teachers new possibilities for teaching approaches, and the succession of uses already employed suggests that each experiment increases the distance from traditional methods. This can be illustrated by describing the five major uses of the computer in English: drill, tutorial, prewriting or invention, word

processing, and revision. The latter three are obvious departures from conventional learning techniques. Important advantages of computer assisted instruction are that it engages all students in the work, allows more individual attention from both peers and instructor, and lends itself to a calm and positive atmosphere. Most importantly, computers eliminate one of the more annoying problems of revision-messiness. Computer assisted instruction also has disadvantages, however, including problems both for students who cannot type and for teachers unaccustomed to the physically exhausting routine of monitoring students individually. The microcomputer is not a passing fad, but a functional tool that has been effectively integrated into many educational disciplines, including English. Teachers should take advantage of the technology that has aroused the interest and attention of students and direct its use to their advantage. (HTH)

Intended for the junior high school or secondary school English teacher, the articles and features in this journal focus on young adult literature and the adolescent audience. The first article, Zibby Oneal's "Writing for Adolescents: Pleasures and Problems," describes the responsibilities of authors of adolescent fiction, while the second article, "YA Detective Fiction: Nancy Drew and the Age of Technology," by Anita Fisher, explains how the genre of Drew mysteries have adjusted to the computer world. The third article, Lin Buswell's "Rural Youth: The Forgotten Minority," offers a brief discussion and bibliography of novels portraying rural adolescents, and the fourth article by Margaret Sacco presents ways of teaching students to use the "Essay and General Literature Index." Specific pre-reading, reading, and postreading strategies are suggested in Gerrit W. Bleeker's "Using Young Adult Fiction to Reintegrate the Language Arts." The sixth article, Patricia P. Kelly's "Before Teaching" a Novel: Some Considerations," discusses selecting novels for class reading, and the final article, Tom Finn's "A Tale of Two Cities: American Young Adult Fiction in London and Paris," discusses the popularity of American adolescent fiction abroad. Other features include notes from the editor, ALAN's news highlights, and an interview with Gloria Miklowitz. (MM)

Descriptors—*Cognitive Development, *Cognitive Processes, *Critical Thinking, Expository Writing, Higher Education, Persuasive Discourse, *Sequential Learning, *Writing Exercises, Writing Instruction, *Writing Research, Writing Skills Identifiers—Reading Writing Relationship, *Summary Writing

An examination of student papers from three universities on the same tasks revealed that expository writing tasks were less demanding cognitively than argumentative writing tasks and that argumentative writing tasks were less demanding than speculative tasks. Another finding was that when students were able to translate a generalized task into personally meaningful problems, they used more sophisticated strategies. These findings suggest that writing tasks should be designed sequentially to stimulate students to operate on cognitive levels that challenge

their thinking and engage their interest so that they will be motivated to draw upon the resources they possess. Summary writing offers such potential. Students can be shown that summaries have "cognitive levels" that can be related to the use of reading materials as sources for developing their ideas. Summaries at the restatement level, which draw on the text's actual language, are analogous to the use of direct quotations in their writing. Summaries at the descriptive level, which follow sequentially the text's main arguments, are related to the use of paraphrase in their writing. And summary writing at the analytic level, which requires students to take arguments apart to see how they are constructed, prepares them to view the reading texts critically and to use them as take-off points in exploring their own thinking. (HOD)

Descriptors—*Cognitive Processes, *Coherence, *Cohesion (Written Composition), College Freshmen, Higher Education, Influences, *Locus of Control, *Writing Processes, *Writing Research In order to evaluate writer control of global coherence under various contexts, writer texts produced by 13 college freshmen enrolled in a basic skills section of a composition course were collected as a natural part of the ongoing instruction. The texts examined were written on five different topics: misuse of power, a personal experience of the writer, schooling, a writer-selected topic, and discrimination. Each assignment required different types of cognitive, linguistic, and textual manipulations on the part of the students; demanded the use of different background knowledge; and were produced under various time constraints. The written texts were then given to three readers and ranked in terms of their overall or global coherence. Results showed that as ranking conditions varied for the students, so did their ability to control global coherence. For almost all writers, rank within one writing condition was not predictive of rank within another. Furthermore, different writers were affected differently by different tasks and sensitive to different aspects of each writing condition. Just as a writer's control of coherence within one writing condition was not predictive of control within another, overall writer control of coherence was not always predictive of control from one task to another. These results suggest that growth in writing is a process that involves the writer's ability to use and control strategies within an ever widening range of contexts. (HOD)

Descriptors—Aggression, *Characterization, Child Development, Child Psychology, *Children's Literature, *Evaluation Criteria, Hostility, *Literary Criticism, Literature Appreciation, *Moral Values, *Value Judgment

Adults must be willing to accept attitudes of criticism and rebellion as serious and valuable components of children's literature, but they should also expect a good children's book to make some sort of moral evaluation of those attitudes. For example, while one may respect the candor with which "Hansel and Gretel" depicts the struggle of children against adults, one must also question its indulgence in moral over-simplification. The wicked witch or evil stepmother, as the incarnation of all those aspects of the mother that the child finds threatening, is a figure of absolute evil, utterly devoid of all human goodness. Stevenson in "Treasure Island" permits the supreme act of rebellion against adult aggression to occur only as a mechanical act, not as one deliberately and rationally chosen by the child. J. M. Barrie, on the other hand, in "Peter Pan"

makes a moral judgment about Peter Pan's behavior. Since Peter refuses to leave the island—a paradise of childhood—he cannot find a heart; and to the extent that Peter fails to find a heart, the novel judges his rebellion a failure. One should have reservations about endorsing the moral implications of any work that encourages children to think in terms of absolute good and evil to the detriment of such qualities as sympathy and compassion. Literature should be judged not only by the complexity and sophistication with which it presents moral issues, but also by its display of humanity. (HOD)

The logic and the benefits of requiring college students in basic speech communication classes to tape-record oral journals are set forth along with a detailed description of the assignment. Instructions to the students explain the mechanics of the assignment as follows: (1) obtain and properly label a quality cassette tape; (2) make seven extemporaneous, three-minute entries during the semester; (3) listen to the instructor's critique of the first two entries so that the final five entries can be improved; and (4) include observation, analysis, and application as parts of each entry. The difficulty of establishing criteria for grading is discussed as are the benefits of the oral journal to the professor as well as to the student. (EM)

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: Prior to the persuasion unit, students have spent several weeks in class utilizing library research techniques, public speaking skills, and their writing processes. The unit has been devised to give students practical experience using critical thinking and decision-making skills, persuasive language, writing and speaking abilities, and critiquing techniques. Students first brainstorm as a class for ideas on possible issues with which they are concerned (e.g., national security, abortion, drug abuse), each choosing five possible topics for their own research. One day in the library helps students peruse available materials for their possible issues. We then discuss how to state, defend, and argue an opinion fairly. Returning to the library, they limit their topics to one, decide which side of the issue they will take, and find at least two sources of information. After taking notes, they make a skeletal outline, slotting in facts where appropriate. The students write rough drafts of their persuasive papers after deciding on a specific audience (e.g., the President or an anti-abortion group). I read papers anonymously in class and students critique the form, arguments, and persuasiveness of each other's papers. Students rewrite their papers for a grade; they are later given an option to rewrite their papers for a higher grade. Finally, the class role-plays the specified audiences while students read their papers as speeches. After this experience, students are given a chance to use "unfair" persuasive arguments (bandwagon, testimonial, name-calling, card stacking, and glittering generality)—see "Scholastic

Voice," November 12, 1982, page 17)—by writing and performing commercials singly, in pairs, or in trios. In class, students brainstorm for products' names, write out dialogues, prepare props, and practice their commercials. Then commercials are videotaped and played back to the class while students critique commercials verbally and in writing, commenting on what students have done effectively and how commercials could be even better. [This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community.] (Author)

"The Play's the Thing"—In Which One Finds Himself and Others.

Corono-Norco Unified School District, Corono, CA.

Pub Date—84

Note—3p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Acting, *Community Involvement, Demonstration Programs, *Drama, *Dramatics, Junior High Schools, Objectives, Parent Participation, *Playwriting, Program Descriptions, Student Interests, *Student Participation, *Teacher Developed Materials, Teacher Participation, Teacher Role

Identifiers—PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: Two-semester program: The working center of the program is the production of two original plays, written by the drama teacher of Raney Junior High and based on ideas or interests researched by teacher and drama students. Four goals direct the writing of each play: (1) to have the original play do what the professional plays do not do—have the typical turnout for a school play (thirty hopeful girls for every ten boys); (2) to present diverse aspects of specific historical events or movements; (3) to illustrate ethical or moral predicaments and struggles of individuals and/or groups; (4) to provide a structure in which the creative, practical, and technical talents and skills can come together in a broad and various learning experience for each participant; i.e., the "actor" must also become the "carpenter"; the leader in one phase of the production must become the follower in another phase. Subject matter of plays reflects the goals: USO girls stranded during World War II; the reactions of the women of New Orleans to Andrew Jackson and his "dixie shirts"; the boom and bust of the "Roaring Twenties"; an Irish village in conflict with its English overlords; a futuristic flight into a world where the images of the "idiot box" are no longer what one watches but what one lives; an old woman's fight with the Right of Public Domain; a Saxon keep's struggle against its Norman conquerors; a group of women "libbers" setting up a co-op farm; a southern family split by differing views of the approaching Civil War, etc. Seventh, eighth, and ninth graders form the acting nucleus. Elementary and high school students, as well as faculty members, serve as guest actors. Work and technical crews come from everywhere: students, faculty, administration, parents, and community people. Involvement is broad—from set construction to costuming; from program printing to technical problem solving. A retired coal miner, a Ph.D., a finance consultant, and a wildcat oil man have been very important parts of a very important support system. An award-winning photographer has sold tickets for us; a football coach has cooked chili for the work crew. By the simple process of asking for it, we have received help from the biggest and the best: when a bagpipe was needed, an antique collector provided one; when fifty crackerjack uniforms were needed, the United States Navy provided them. [This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community.] (Author)

Descriptors—*Audience Participation, Audiences, *Mass Media Effects, *Media Research, Models, Personal Autonomy, Political Power, Research Needs, Research Problems, *Speech Communication, *Theories

Identifiers—*Audience Response, *Uses and Gratifications Research

The uses and gratifications paradigm, like the initial conceptions of media effects, can be viewed as a compatible elaboration of contemporary social and political theory. The fundamental assumptions of the uses and gratifications approach, particularly the assumptions regarding the nature and extent of audience activity and the ability of the audience to recognize and act in their own best interest, implicitly bind the approach to a limited conception of the distribution and maintenance of political power. Just as the strictly behavioral orientation of the pluralist theory promotes an overly narrow conception of the exercise of power, so the behavioral orientation of the uses and gratifications paradigm, by placing so much faith in the audience's ability to self-report the immediate as well as larger implications of their media orientations, over-emphasizes the degree of audience autonomy. If the uses and gratifications paradigm is to truly reflect the audience's media experience, it must reject the optimistic and simplistic notion that an active audience implies a powerful audience. Descriptors—*Communication (Thought Transfer), *Communication Research, Developed Nations, *Developing Nations, Economic Development, Intellectual History, *Intercultural Communication, International Relations, *Social Change, *Technological Advancement

Identifiers—*Development Communication, Theory Development, Theory Practice Relationship
Through a review of development literature, this paper examines the changes that have occurred in thinking about the role of communication in developing nations. The first section of the paper surveys the theories of the past, including those of the neo-classical and Marxist scholars. The section also looks at the emergence of the dependency theory, examines paradigms as research complexes, and discusses theory and practice gaps in communications. The second section of the paper looks to the future and to an integration of theory and practice. Among the topics discussed in this section are (1) the meaning of communication in development; (2) development priorities of the 1980s; (3) Third World communication priorities and expectations in the 1980s, including the role of the new technologies in development, new communication and cultural policies, and alternatives for democratization and participation; (4) potential areas of change in communication, including the organization of people, areas of rural need, and communication technologies and rural development; and (5) new paradigms and practices in the 1980s. Descriptors—Attitude Change, Consumer Economics, *Futures (of Society), *Information Systems, *Information Utilization, Media Research, Research Problems, *Technological Advancement, *User Satisfaction (Information), *Video-text

Identifiers—Media Role

Today the majority of the United States work force is employed in the production, processing, and dissemination of information. However, the situation with regard to videotex, the medium that served as the basis for predicting an information society, is far from settled. The statistics concerning videotex are impressive, the technology fascinating, and the promise tantalizing. However, there is good reason to doubt that the medium is on the verge of universal availability, much less adoption, and certainly much less dominance. At this time, after all the marketing hyperbole is stripped away, the facts remain that most videotex systems are in the testing stage, are not two-way, and have not yet proven their attractiveness. Many of these alternative ways of gathering information or of conducting transactions are not perceived overwhelmingly by consumers as having advantages over tried and proven methods. While an impressive percentage of potential consumers seem predisposed to adopt videotex, some 40 years of mass media research has shown the difficulty in linking experimental predispositions or attitudes to ultimate behavior in field studies. Despite the failure to link attitudes and behavior, predictions are still being made of a "wired nation," but the information available indicates that this is more charming mythology than fact. (Summaries of videotex usage in Europe, Canada, and the United States are appended.) (HOD)

Pickett, Terry A. Sorenson, Ritch L.

An Exploratory Investigation of the Relationships among Organizational Cultures, Organizational Communication Systems, and Member Satisfaction and Commitment.

Pub Date—May 83

Note—70p.; Paper presented at the Annual Meeting of the International Communication Association (33rd, Dallas, TX, May 26-30, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Communication Research, Communication Skills, *Culture, Decision Making, Higher Education, *Job Satisfaction, *Organizational Climate, *Organizational Communication, Organizational Effectiveness, Simulation

Identifiers—*Organization as Culture

A study examined the relationship between organizational communication systems and organizational culture and between culture and two human relations-based outcomes—satisfaction and commitment. Subjects were 26 college students who were assigned positions in one of two simulated, bureaucratic organizations that functioned for four class periods. Each organization consisted of upper management, production, and supply and delivery personnel. The goal of the organizations was to make profits from the sale of a product. Each subject completed a number of questionnaires and scales to measure the various aspects of organizational culture (image, coorientation, and coordination), organizational communication, and satisfaction and commitment. General findings indicated a clear communication-culture relationship such that communication created culture. Less clear was the impact of the communication-created culture on member satisfaction and commitment. The results also suggested that communication and culture affected member satisfaction in general and direct ways, and that satisfaction served to induce member commitment to the organization. (Copies of the scales and questionnaires used in the study, along with extensive tables of data are appended.) (FL)

Descriptors—*Authors, *Drama, Literary Criticism, Literary History, Production Techniques, *Professional Recognition, Scholarship, *Speech Communication, *Theater Arts

Identifiers—*Gorelik (Mordecai)

The author pays tribute to Mordecai Gorelik, a noted critic and scholar of the theatre, by reflecting

on the man's critical and dramatic writing. Turning first to his critical writing, the author makes special mention of Gorelik's essays in newspapers and notable journals, his book and production reviews, his articles on theatre appearing in both the "Encyclopedia Britannica" and the "Encyclopedia Americana," his contributions to other books, and his classic 1940 work, "New Theaters for Old," which synthesized a century of modern drama and theatre. In his mention of Gorelik's dramatic writing, the author reflects on the following works: "Herr Biedermann and the Firebugs," "The Annotated Hamlet," "The Big Day," "Paul Thompson Forever," "Rainbow Terrace," "Andrus, or the Vision," "United We Stand," and "Yes and No." (HOD)

Descriptors—Careers, College Faculty, Higher Education, Liberal Arts, *Professional Recognition, Public Speaking, *Scholarship, School Support, *Speech Communication, Writing for Publication Identifiers—Brigrance (William Norwood), Wabash College IN

Tribute is given to William Norwood Brigrance, who for 38 years—until his death in January 1960—taught speech primarily at Wabash College, Indiana. In his accolade of Brigrance, the author presents five reasons Brigrance served his speech profession in a small liberal arts college: (1) he needed freedom to write his articles and textbooks, (2) he and his family felt ties with the area, (3) he had developed an extensive range of speaking opportunities, (4) Wabash College met his demands for both philosophical and financial support, and (5) he was devoted to the role of colleges such as Wabash in training students to participate effectively as both professionals and citizens in a democratic society. Descriptors—*Communication (Thought Transfer), *Communication Research, Debate, *Discourse Analysis, Higher Education, *Persuasive Discourse, *Research Methodology, *Speech Communication, Speech Instruction, Speech Skills

Identifiers—*Theory Development

A review of literature in the speech communication field from 1978 to 1983 reveals developments emerging in the area of forensics, while a review of the contributions to theories of debate analysis reveals advances in both policy systems theory and in hypothesis testing. Although much of the research is directed toward forensics educators, it is closely tied to argumentation and decision theory, thereby offering the potential for making a significant contribution to knowledge in the wider scholarly discipline. The research in individual events shows a few qualitative studies, a number of essays devoted to a coherent and in-depth analysis of a specific theme (argument in individual events), and some critiques and proposals for future research. The literature related to nonpolicy debating is still in its early stages of development and can be characterized as anecdotal, subjective, and exhortatory. (HOD)

Pantomime: Developing Imaginative Performance Skills.

Pub Date—10 Aug 83

Note—32p.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Body Language, Characterization,

Creative Dramatics, *Exercise, Higher Education, Human Posture, Interpretive Skills, *Movement Education, *Nonverbal Communication, *Pantomime, Relaxation Training, Self Expression, *Theater Arts

Having defined pantomime as the art of communicating ideas and emotions without dialogue, this report stresses the role of the body in suggesting an idea, impression, sensation, or character and offers a series of exercises to help develop the muscular coordination and graceful movement characteristic of good pantomime technique. The first series of exercises presented reviews the principles of relaxation and concentration necessary to visualize the size, weight, and texture of imaginary objects while the next set stresses the role of posture in suggesting a character's mood and attitude. Other exercises that help develop the precise hand gestures necessary to convey significant moods and attitudes and suggest specific forms are offered. The report further develops the art of gesture with exercises emphasizing the importance of facial expression and bodily actions and enhances movement awareness with exercises requiring a bodily response to a suggested mood or attitude. Finally, characterization, which involves placing a well-defined character in a specific situation or environment, is developed by a series of exercises intended as models for imitation. The report also provides a series of supplementary exercises useful for developing the skills of handling props and working in group pantomimes. (HOD)

Descriptors—Communication (Thought Transfer), Communication Research, *Educational Change, Educational Trends, Futures (of Society), Higher Education, Intellectual History, Intercultural Communication, Interdisciplinary Approach, Organizational Communication, *Professional Development, *Professional Recognition, Professional Services, Scholarship, *Speech Communication

Over the past fifty years, the speech communication discipline has confronted more frontiers than most. Earlier frontiers involved a preoccupation with physiology and an application of electricity to speech communication in a myriad of ways. Another reliable source of frontiers and one that led to fragmentation or a speech department of unified diversities is the seeking of specializations within speech communication. Later frontiers revolved around a fascination with intercultural communication and the necessity to deal with communication across cultures. A more recent and more rapidly advancing frontier concerns organizational communication. Both of these frontiers—organizational communication and intercultural communication—are of equal importance. Both are joint ventures with other disciplines and as such they reflect the continuing frontier of working out satisfactory relationships with related fields of study. A divisive frontier that challenges the profession is one of interaction, of fitting metaphoric and experientially derived notions that are useful and operationally valid into a statistical world. Descriptors—*Civil Rights, *Civil Rights Legislation, *Employer Employee Relationship, Employment Practices, Federal Legislation, *Freedom of Speech, *Labor Legislation, Labor Relations, Self Expression, *Speech Communication, State Legislation

Most employees in the United States are employees at will—they can be fired for any or no reason. In one exception to this rule, however, federal or state statutes protect employee expression, most significantly in the area of private employee testimony. The protective schemes developed by Congress and the state legislatures are of two types: those designed to protect employees testifying before courts, labor commissions, or legislatures and those designed to protect employees testifying about specific statutes concerning air pollution, wages and hours, coal mine health and safety, and so forth. Another major category of statutes protecting employee communication are those that protect political activities such as expressing political opinion, supporting a particular party or candidates, and running for and serving in political office. Thus far, legislative protection seems to be more common either when the communication is far removed from the job or when a narrow, tightly developed statute exists to avert some grave danger. Even in the present fragmented statutory approach, legislation protecting employee communication has been passed during the past decade at a rate far greater than at any other time in history. Legislatures face the basic question of whether or not organizations can operate efficiently if their employees are free to communicate. (HOD)

Teaching Implications: Components of a Unit on Interpersonal Communication and Aging.

Pub Date—Nov 83

Note—28p; Paper presented at the Annual Meeting of the Speech Communication Association (69th, Washington, DC, November 10-13, 1983).

Pub Type—Guides - Classroom - Teacher (052) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Aging (Individuals), Course Descriptions, *Course Objectives, Family Relationship, *Gerontology, Higher Education, Human Services, Interpersonal Attraction, *Interpersonal Communication, *Interpersonal Relationship, Marriage, Speech Communication, Units of Study One possible unit on interpersonal communication and aging consists of five components: interpersonal attraction, talk with friends and neighbors, marital communication, family communication, and personal communication with service providers. The component on interpersonal attraction explains the complex relationship of age to attraction, while the component on talk with friends and neighbors shows that the elderly live in a social world very similar to the college student—both see friends and neighbors come and go and must replace friends to avoid isolation. The component on marital communication presents a realistic picture of romantic communication through the life cycle, acquaints students with theory relevant to marital communication, and reviews extant research on communication between older partners. The component on family communication and aging presents communication theory relevant to family interactions that include older members and reviews research on

communication within the older family. Finally, the component on personal communication with service providers addresses two issues: (1) to what extent do social programs for the elderly facilitate meaningful social interaction? and (2) how can practitioners and clients communicate so that the goals of each will be accomplished with minimal discomfort? (Appendixes provide bibliographies for each component.) (HOD)

Schnell, Jim Wagner, Ray
The Symbolic Interactionist Use of Participant Observation: A Study of Conflict Resolution Communication in a Countercultural Setting.

Pub Date—[83]

Note—37p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Communication Research, Comparative Analysis, Conflict Resolution, Cooperatives, Fraternities, Group Dynamics, Organizational Communication, Philosophy, Research Methodology

Identifiers—Counter Culture, Participant Observation

The conflict resolution communication attempts practiced by a food cooperative were studied to determine if they revealed the primary ideals of the counterculture philosophy. To highlight the findings, the study also examined the conflict resolution communication attempts of a fraternity—a representative of the dominant culture philosophy. Data were gathered through participant observation, interviews, surveys, and reviews of the literature written by and about the organizations. Results showed that the conflict resolution communication attempts of the food cooperative were based on a counterculture philosophy on the organizational level (ritual, procedures, clothing styles, jargon, and norms), but were essentially the same as the fraternity conflict resolution communication attempts on the core philosophy level. The findings indicate that while the formal conflict resolution formats of the two groups differed, the power bases were the same, with power usually based on who had information and position. While the cooperative generally used a form of voting within the consensus process framework instead of the actual process consensus itself, the fraternity simply discussed an issue and then voted on it. The egalitarian ideals advocated by the cooperative were only superficially evident in its attempts to resolve conflicts. (FL)

Descriptors—Code Switching (Language), Communication (Thought Transfer), Communication Research, Cultural Interrelationships, Ethnography, Intercultural Communication, Language Research, Language Role, Language Usage, Literary Criticism, Research Methodology, Research Needs

While language switching among multilinguals has been studied in a wide variety of contexts, few attempts have been made to generalize or to integrate findings into useful communication theory. Since language switching is an important part of personal as well as group identity and since issues surrounding language identity are often a focal point of interethnic conflict, the speech act of switching language merits a more concentrated study. This can be accomplished through such techniques as ethnographic description, consisting of participant observation, interviewing, and breaching experiments; conversation analysis of bilingual interaction; and examination of communication behavior through literature. Such diverse methods of study, however, are only a first step. An approach is needed that can integrate research findings into a useful intercultural theory and that may also be incorporated into education training in the field. Such a research direction can be provided by frame analysis, which offers a set of terms that describe meta-communication through language and code switching, and by multiple analysis research which

approaches a communication event from several diverse perspectives simultaneously. (HOD)

The Definition and Delimitation of Intrapersonal Communication: A Physiological Perspective.

Pub Date—Nov 83

Note—19p.; Paper presented at the Annual Meeting of the Speech Communication Association (69th, Washington, DC, November 10-13, 1983).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Cognitive Processes, Communication (Thought Transfer), Communication Research, Definitions, Interpersonal Communication, Physiology, Psychological Studies, Research Methodology, Research Needs, Speech Communication, Theories

Identifiers—Intrapersonal Communication

A definition of intrapersonal communication is needed that will encompass noncognitive elements and thus allow for a broader range of research methodologies. One possible definition is the physiological and psychological decoding, processing, storing, and encoding of messages that happen within individuals at conscious and nonconscious levels whenever they communicate with themselves or others for the purposes of defining, maintaining, or developing their social, psychological, or physical selves. Such a definition differs from other conceptualizations in several ways. First, it considers both physiological and psychological processes. Second, it includes conscious and nonconscious communication processes. Third, it specifies functions that frame the intrapersonal domain. Finally, it extends the situations in which intrapersonal communication can be considered by focusing on the functions of intrapersonal communication rather than on the situations in which people find themselves. Broadening the definitional boundaries of intrapersonal communication to include physiological processes can give impetus to new research techniques and allow for additional insights into how and why various communication processes function. Descriptors—Citizen Participation, Communication Skills, Cooperation, Coping, Decision Making, Democratic Values, Futures (of Society), Innovation, Interpersonal Communication, Models, Problem Solving, Speech Communication, Speech Instruction, Teaching Methods

Identifiers—National Issues Forum

The National Issues Forum model, a series of community based public discussions on key domestic issues, may be a partial solution to the "human gap" between growing complexity and a capacity to deal with it, by exemplifying "innovative learning." To engage in innovative learning, characterized by anticipation and participation, individuals must be able to enrich their contexts, keep up with the rapid appearance of new situations, and communicate the variety of contexts through dialogue with other individuals. The goal of this innovative learning enrichment process would be to prepare people for citizen participation in democracy, through a problem/possibility orientation toward those domestic issues likely to occur in the communications era. Teaching this problem/possibility style requires (1) involving and enlisting the cooperation of people with divergent views of a problem, (2) teaching people to state the overall issue so that all viewpoints are fairly represented, (3) challenging people with divergent views to work together to define the relevant questions and issues requiring attention, and (4) developing a network to bring together competent people for long-term involvement in the decision-making process. Adapted to the speech communication classroom, the forum model would enable students to develop a style of learning and decision-making that is appropriate for the "communications era" of the future. Through personal reminiscences, the author chronicles his involvement with the Speech Communication Association and the Central States Speech Association beginning with his attendance at the twentieth annual convention of the National Association of Teachers of Speech in 1933. The author concludes with a recollection and summation of five problems he had identified in a keynote address to the Central States convention in 1978: the lack of attention that the discipline is paying to language; the need to promote freedom of speech as well as ethical communicative behavior; the necessity for constant review of what is being done in the discipline; the need to maintain concern for contemporary communication and criticism; and the urgency for strong commitment in the discipline to the cause of freedom of speech. Identifiers—Buehler (Ezra Christian), University of Kansas

The name of Ezra Christian Buehler deserves to be added to the list of significant contributors to speech communication education. As an instructor at the University of Kansas, Professor Buehler has distinguished himself through his contributions to basic speech students, graduate students in speech education, and his colleagues. He expressed his belief in the discipline of speech and in speech students in a 1960 essay entitled "Credo—A Declaration of Faith Concerning Speech Education," and in his book, "Speech: A First Course." And he has practiced three basic principles he himself advanced for teachers of the basic speech course: (1) know the students, (2) motivate them, and (3) maintain a congenial classroom. Further showing his dedication to the basic speech course and his desire to recognize and encourage outstanding teachers, Buehler was instrumental in establishing a teaching award for first-year basic speech teachers. Buehler also organized the "Conference of Directors of Basic Speech Courses of Midwestern Universities." Intended as a single meeting in 1961, the conference has agreed unanimously to meet every year since. The learning he encouraged at that first conference has spread to a second and third generation of course directors. (HTH)

Identifiers—Audience Awareness, *Speech Writing
Developing a conference presentation involves both assembling and delivering the materials. In selecting a topic, speakers should consider their own prior knowledge and experience, the topic's interest and significance for them as well as for the audience, and the amount of information available. They can research materials on the chosen topic efficiently through a database computer search and can then construct an outline to insure that the ideas will be organized and sufficiently supported or amplified to meet the needs of the presentation. They should connect the three main parts to a presentation—introduction, body, and conclusion—with clear transitions, and create a brief, clear, and provocative title. The materials may be presented in any of four ways: impromptu, extemporaneously, by reading, or from memory. Whichever format they choose, speakers should concentrate on meanings, talk with rather than at the audience, and punctuate and support ideas with voice and body. They can relieve stage-fright by remembering that such feelings are normal and by being thoroughly prepared with both information and practice. Audiovisual aids can give clarity and justification to the presentation, so long as speakers keep their attention on the audience and use the simplest, most direct audiovisual format. (HTH)

Identifiers—*Theory Practice Relationship

A comparison of several major learning taxonomies produced a three dimensional taxonomy of learner involvement on the mental, social, and physical dimensions. The six hierarchical levels of the mental dimension—recording, reacting, interpreting, analyzing, evaluating and applying, and synthesizing—indicate a synthesis of cognitive, affective, and some psychomotor elements. The social levels—aggregate, individual, and group—are further subdivided into silent or vocal/verbal interactions with others. The physical dimension, indicating the extent of muscle use during learning activities, moves from (1) the small muscles like the eyes and lips to (2) motion focused in the extremity of the body, then (3) movement located in a part of the body, and finally to (4) activities requiring coordination of total body movement. By providing a clearer understanding of what various assignments demand of students, the cubic taxonomy assists in the designing, sequencing, and assessment of teaching activities. Preliminary research indicates that the three dimensions are valid in classroom and job interview situations. (Appended is a table comparing various taxonomies, graphs of the cubic taxonomy, and an exercise in using the taxonomy to evaluate classroom speech assignments.) (MM)

Descriptors—College Students, Communication Research, Cultural Images, Higher Education, *Medical Services, *Occupations, Readability, Reader Response, Reading Comprehension, *Recall (Psychology), *Sex Bias, Social Attitudes, *Social Bias

To determine the influence of the health care pro-

vider's gender and profession on readers' memory for health information, 48 university students were asked to read a three page article on heart attacks that was attributed to either (1) a female nurse, (2) a male nurse, (3) a female physician, or (4) a male physician. After reading the article, the subjects were asked to recall the author's name and profession, to rate author competence and article informativeness, and to complete a recognition memory task. Analysis revealed a higher recall rate among subjects who believed they had read an article by a male or female nurse; no significant main effects were found for gender. While "gender effects" were not observed, it is noteworthy that earlier projects that reported gender effects used videotapes or audiotapes, rather than written stimuli as in the present study. Reasons for the higher recall among subjects assigned to nurses could include expectations that articles written by doctors would be too difficult to understand and increased attentiveness to articles written by people who go counter to the reader's expectations about the type of health care professional who would author such an article. (MM)

Identifiers—*Christian College Consortium

Efforts by Christian colleges to integrate faith and learning in communication courses through conscious and direct planning are based on several questionable assumptions: that faith must be learned through the intellect, that all evangelical Christians share the same theological roots, and that interpersonal communication can be taught like any other subject. Faith can be viewed, however, in two ways—as a series of propositions or as an intuitive experience. The validity of both approaches is substantiated by current research in cerebral dominance. Injecting preplanned, conscious faith/learning integration into courses might destroy the possibility for more spontaneous, incidental learning. The Christian College Consortium represents not a uniform view of faith, but a variety of approaches reflecting different theological roots, and although the cognitive/propositional approach appears to dominate, Quaker writings offer support for incidental faith/learning integration through their emphasis on immediate revelation. While some teachers may prefer preplanned and conscious approaches, other teachers are by nature, personality, or philosophical commitment more at ease with the incidental mode. The communication classroom itself appears particularly suited for this mode. A valid means of integrating faith and learning, the incidental method should not be eliminated from the interpersonal communications classroom. (MM)

A Structuralist Approach to Television Criticism.

Pub Date—11 Nov 83

Note—23p.; Paper presented at the Annual Meeting of the Speech Communication Association (69th, Washington, DC, November 10-13, 1983). Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Aesthetic Values, Characterization, *Programming (Broadcast), Research Methodology, *Research Needs, Research Problems, *Semiotics, Serial Ordering, *Structural Analysis (Linguistics), *Television Research, Television Viewing, *Time Perspective

Identifiers—*Television Criticism

Although television is highly dependent on language and semiotic analysis, its form can best be analyzed through the structural notion of transfor-

mation. The critic's task becomes the articulation of structural laws intrinsic to television. One such law has to do with how television structures time. Television programming transforms action into half-hour or hour-long episodes that can continue over several nights, weeks, months or years, sometimes in a simple sequence of recurrent patterns, sometimes incrementally, and sometimes even by repeating individual segments. The structural coherence of the individual episodes allows the audience closure, the ability to put together the parts of a greater whole. Instead of a compression, in a literary sense, of character development, usually unfolding over a period of two hours, serialization demands repetition and expansion. It diminishes the need for resolution and shifts the emphasis to process. The use of temporal structure also helps build a web of connections that enlarges and complicates characters and allows for sustained thematic treatment. Given the current linguistic bias in semiotics, such considerations of television's aesthetic structure would most likely slip through the semiotologist's analytic net. Structuralism as a methodological tool, therefore, must be rescued from the semiotologists if it is going to be useful in television criticism. (HOD)

Boileau, Don M.

Student-Teacher Interactions in 2059.

Pub Date—9 Mar 84

Note—13p.; Paper presented at the Annual Meeting of the Eastern Communication Association (75th, Philadelphia, PA, March 8-11, 1984).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Conference Papers, *Educational Trends, *Futures (of Society), Higher Education, Secondary Education, *Speech Communication, Speech Curriculum, Speech Instruction, Student Teacher Relationship, Teaching Methods, Technological Advancement

The author focuses on student teacher interaction and the daily experience of the speech communication instructor to suggest what might happen to the teaching of speech communication 75 years from the date of this presentation. The topics of papers at a Communication Association panel in the year 2059 might include the following: (1) providing feedback on group discussion exercises for college level basic competency in group skills, (2) using business situations in setting up exercises for high school interviewing competencies, (3) selecting video scenes to integrate with discussion of ethical concerns, (4) using the Great Teachers Series for developing the public speaking class, and (5) using United Nations proceedings for evaluating evidence from an intercultural perspective. The similarity of content to that of the present is apparent. Technology, however, will change the delivery system. What will not change is the interaction between student and teacher. (HTH)

A Matter of Choice.

Pub Date—19 Feb 84

Note—7p.; Paper presented at the Annual Meeting of the Western Speech Communication Association (Seattle, WA, February 18-21, 1984).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Curriculum Development, Higher Education, Language Usage, *Liberal Arts, Personal Autonomy, *Speech Communication, Speech Instruction, Symbolic Language

Identifiers—Freedom, Freedom of Choice

The intent of a liberal education is to enhance the student's freedom, the faculty of intentional choice. The capacity of humans to step outside of themselves, which allows development of self-concept and subsequently self-esteem, is potentiated by the humans' unique sign, the symbol. Each of the liberal arts is concerned with the development and augmentation of the individual capacity to use symbols. Through the symbol, humans acquire the capacity for conscious intent and it is conscious intent that produces freedom. The development of spoken language is the prerequisite for the natural development of the symbol. The discipline of speech communication is absolutely necessary for the study of any other liberal art, and therefore holds a necessary place in every liberal arts curriculum. (HTH)

 Descriptors—Classroom Techniques, Course Content, Course Descriptions, *Course Organization, Economic Factors, *Educational Innovation, Grading, Higher Education, *Speech Communication, Speech Instruction, *Teaching Assistants, Textbook Content, *Undergraduate Students

In response to severe budget restrictions and a shortage of qualified graduate students, a basic speech communications course instituted three innovations: use of undergraduate teaching assistants, contiguous scheduling of lecture and breakdown rooms, and the publication of a textbook supplement with detailed activity guidelines and examples. With these innovations, a single faculty member and one half-time master's degree candidate were able to offer 1000 students per semester a rigorous hybrid course that included informatics and persuasive public speaking. Chosen from students who had already successfully completed the course, the undergraduate assistants were familiar with the course content, goals, and procedures. They acted as effective course facilitators while saving the department a large amount of money in salaries. By scheduling lecture and breakdown rooms simultaneously, the course director gained flexibility in shifting from large to small group activities. As the course-specific textbook freed teaching assistants from acting as discussion leaders, the course director retained control over course content and grading despite the large number of students enrolled. Several simple innovations thus permitted the incorporation of a mass lecture format into a performance based course. (MM)

 Descriptors—*Educational Trends, Education Work Relationship, *Futures (of Society), Higher Education, Program Development, Program Evaluation, *Speech Communication, Speech Curriculum, *Speech Instruction
 Recurring questions on the discipline of speech communication include whether it is in fact a discipline, whether it justifies its own department, and what job prospects await speech communication graduates. These questions are not unique, but are taken very seriously by most administrators when evaluating speech programs. Reasons underlying most of these questions include inconsistent nomenclature and curricula and the rise of mass media related disciplines. Four megatrends, if fulfilled, will resolve such questions: (1) the nomenclature and the curricula associated with speech communication will become uniform from university to university, reflecting a consistent and systematic discipline; (2) the relevance of studying speech communication will be greatly enhanced by the growth of the "information society"; (3) speech communication programs will see a strong trend toward a career orientation and a gradual movement away from liberal arts orientations; (4) the position of speech communication will be strengthened as the discipline moves toward an even stronger service orientation. Descriptors—Cable Television, *Communications, Computers, *Futures (of Society), *Information Networks, Information Sources, *Mass Media, *Mass Media Effects, Sociocultural Patterns, Technological Advancement, Telecommunications
 Identifiers—Media Role, Telematics

A flood of new electronic technologies promises to usher in the Information Age and alter economic and social structures. Telematics, a potent combination of telecommunications and computer technologies, could eventually bring huge volumes of information to great numbers of people by making large data bases accessible to computer terminals in homes, offices, banks, post offices, government agencies, and other places. Communications between computers and data banks will be greatly enhanced through satellites, creating world-wide telematics networks. As these new electronic technologies grow, they will begin competing with one another for a "slice of the media pie." Cable television systems bring a wide array of information into the home, including signals from distant cities, pay television movies, and electronic publishing services. The variety of new communication channels will be accessible to and provide specialized programming for minorities and other individual groups. Although such "narrowcasting" is likely to fragment the public, providing little overlap in the interests or acquired information of individuals, such fragmentation will benefit advertisers, as well as allow businesses to reach specific groups of consumers through channels other than advertising. Already, smaller, more tightly targeted magazines are eroding the markets of previously mass circulating magazines. (HTH)

 Descriptors—Communication (Thought Transfer), *Communication Research, Interpersonal Communication, Motivation, Network Analysis, *Organizational Communication, *Research Methodology, *Research Problems, Statistical Significance

Identifiers—*Interpretive Approach
 Concerned with imprecision in researchers' use of the word, "interpretive," this report draws from the work of Max Weber to describe the characteristics of an interpretive science of organizational communication and then briefly lists some advantages of following the interpretive approach. First examining the role of subjective meaning in organizational communication, the report suggests that actors' subjective meaning must take into account the behavior of others. It then defines two types of researcher understanding—observational and explanatory—and presents obstacles to understanding created by problems in interpreting actors' motivations. Referring to Weber, it states that an interpretive science must set forth statistical probabilities if it is to have causally adequate explanations, but that statistical probabilities yield nothing more than incomprehensible regularity unless they are accompanied by an interpretive understanding of actors' subjective meaning. The report then briefly cites two examples of incomprehensible regularity in interpersonal communication and network analysis research. Finally, the report presents the major advantages of the interpretive approach: it keeps researchers meaning centered, helps them avoid the compilation of sterile and incomprehensible regularities, and allows them to rise above observational understanding and achieve explanatory understanding. The Select High School Tournament: Rewarding Excellence.

Pub Date—20 Feb 84
 Note—13p; Paper presented at the Annual Meeting of the Western Speech Communication Association (Seattle, WA, February 18-21, 1984).
 Pub Type—Reports - Descriptive (141) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*College School Cooperation, *Competitive Selection, *Debate, Higher Education, High Schools, Program Descriptions
 Identifiers—Oregon, Washington

The Northwest Select High School Tournament was the result of several concerns among college and high school debate coaches, including the lack of informational exchange between Washington and Oregon teams and an extended opportunity for summer debate institutes and recruitment possibilities. The objective was to have a top-quality tournament hosted each year by an alternate college. A committee of college and high school debate coaches invited 12 teams from each state based on their records. Called the "Heart of the Northwest," the first tournament took place in 1981, and was won by Washington schools. The following year, the Oregon schools won. Overall response to this concept of rewarding excellence with invitational competition was favorable. However, four problems discouraged participation and resulted in the cancellation of the 1983 tournament: (1) the December date was a hindrance to full participation, (2) a prestigious California tournament became a source of conflict, (3) a central geographic location was too far for outlying schools to attend, and (4) elements of over-competitive rivalry entered into the attitudes of the high school teams around the two states. Interest still remains high in this type of select tournament and—provided these problems can be overcome—future programs may be able to regenerate the Heart of the Northwest Invitational Tournament. Hawkins, Robert P. And Others
Survey Measurement of Cognitive Activity during Television Viewing.

Pub Date—Oct 83
 Note—27p
 Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.
 Descriptors—Academic Achievement, Age Differences, Attention, Cognitive Development, *Cognitive Processes, Comprehension, Elementary Secondary Education, Learning Activities, *Learning Processes, Middle Schools, *Programming (Broadcast), Sex Differences, *Television Research, *Television Viewing, Visual Literacy

One hundred seventy-one middle school students participated in a study to assess cognitive activity during television viewing. Students completed a questionnaire about their favorite programs, viewing habits, and social reality beliefs, then viewed a 17-minute professionally edited episode of a family drama and answered a multiple choice questionnaire. The subjects also kept diaries of their home television viewing for three days, from which the amount of viewing was determined for six categories: comedy, crime-adventure, drama, cartoons, public affairs, and variety. The three main learning measures were central content learning, incidental learning, and inference-making abilities. Distinguishing between attentiveness and amount of viewing, the results indicated that viewing and preference were predictably related. However, viewing was much more weakly related to attentiveness. In general, older children, girls, and those who scored higher on school achievement tests learned more from viewing the family drama episode, confirming that learning more reflected more advanced information processing skills. In contrast, attentiveness to television was unrelated to sex or academic achievement and related to grade only in ways that reflected changing program preferences with age. Surprisingly, correlations between attentiveness and learning indicated that more attentive viewing over a long term was associated with reduced learning from a specific television program. (HTH)

Monitoring Student Listening Techniques: An Approach to Teaching the Foundations of a Skill.

Pub Date—11 Mar 84
Note—26p.; Paper presented at the Annual Meeting of the Eastern Communication Association (75th, Philadelphia, PA, March 8-11, 1984).
Pub Type—Guides - Classroom - Teacher (052) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Curriculum Design, Elementary Secondary Education, *Learning Strategies, Listening Comprehension, *Listening Habits, *Listening Skills, *Skill Development, Student Evaluation, Teaching Methods, *Units of Study
To teach listening as a discreet skill, teachers need a suitable definition of the word "skill." The author suggests defining a skill as a complex of techniques and behaviors from which performers select, depending upon the situation, to fulfill their purposes. The curricular design should be based on four components: (1) establishing attention, (2) identifying content, (3) selecting teaching and learning strategies, and (4) developing an effective evaluation process. After creating interest by showing connections between listening skills and student experience, teachers can present three basic content lessons: physical techniques, focusing on using the eyes, face, body, and mouth to intensify the listening act and correct wandering attention; attitude techniques, concentrating on helping students overcome

negative attitudes toward listening; and cognitive techniques, stressing recognizing speakers' nonverbal cues and identifying important elements in the material heard. Teachers usually find lecture the most effective method of communicating listening skill information and they may reinforce and evaluate student listening techniques through quizzes and performance monitoring. When monitoring, teachers need to make clear that students' listening performance is being rated for each class. Teachers can use these skills to help students change from passive to active listeners. (A syllabus, student report forms, and a selected bibliography are appended.) (MM)

Identifiers—Brown v. Glines, First Amendment, Parker v. Levy, *Supreme Court

Two recent decisions of the United States Supreme Court have emasculated First Amendment guarantees for military personnel. In the first case, Parker v. Levy, an Army captain urged enlisted Special Forces personnel at his post to refuse to go to Viet Nam, claiming that "Special Forces personnel are liars and thieves and killers of peasants and murderers of women and children." His statements were deemed violative of Articles 133 and 134 of the Uniform Code of Military Justice, which provide punishment for conduct unbecoming an officer and a gentleman and for all disorders and neglects to the prejudice of good order and discipline in the Armed Forces. In rendering its decision, the court reasoned that the historical context and language of the General Articles of the Uniform Code provided "fair notice" that the officer's conduct was punishable. In the second case, Brown v. Glines, a serviceman drafted petitions to several congressmen complaining about grooming standards imposed upon Air Force personnel and then circulated the petitions without seeking prior approval from the base commander. The court found the regulations authorizing prior restraint to be reasonably necessary to the unimpeded operation of the military establishment. These two decisions illustrate the need for a continuing assessment of judicial opinions to ensure that the interests of free expression for military personnel are articulated and defended. (HOD)

Identifiers—*Forensics Tournaments

A study investigated whether there was a relationship between contestants' speaking position and their ranking and quality ratings by judges in forensics competitions. In addition, the study examined whether these relationships varied by type of event. Subjects were contestants from two- and four-year colleges in two tournaments held in California. The tournaments consisted of three preliminary rounds and one final round per event. All rounds studied consisted of between three and seven contestants and were judged by forensics coaches, graduate students, and hired local judges. The judges were asked, in addition to filling out their normal ballots, to complete a questionnaire that asked them to list the speakers in order of actual speaking with their assigned ranks and ratings. Scores were collected for approximately 1,500 contestants. Data analysis revealed no significant relationship between speaking position and ranking in panels of three, four, six, or seven speakers when events were combined. A significant difference was found in panels of five, with an advantage to last position. This advantage disappeared, however, when the expository event was excluded from analysis. Additionally, no significant relationship was found in any instance between speaking position and quality ratings. Overall, the findings suggest that speaker position is not a significant determinant of forensic success. (FL)

Descriptors—*Competition, *Debate, Higher Education, *Persuasive Discourse, Program Descriptions, Program Evaluation, Secondary Education, *Speech Communication

Identifiers—*Northwest Forensic Conference

The Northwest Forensic Conference (NFC) was created in response to decreasing budgets and fewer schools participating in forensics. The basis of the NFC is the designated tournament and yearly divisional sweepstakes awards. Special features of designated tournaments include oral critiques and seminars on forensic issues. Initially, it was assumed that the NFC could stabilize and expand the size of some local tournaments and would provide a competitive alternative to these events for programs in the area. NFC tournaments have in fact been larger than local tournaments in previous years, and NFC contestants have competed successfully in the National Debate Tournament and sweepstakes competitions. Based on the NFC experience, several conclusions about the advisability of the designated tournament format may be made. First, this format is generally effective in providing a stable and reasonably predictable tournament size. Second, the form is educationally defensible. Finally, this format demonstrates the willingness of forensics educators to adapt to changing conditions. (HTH)

Identifiers—*Generic Argument (Debate), *Information Overload

When the amount of available information exceeds the ability of the user to process it, "information overload" is created. In an attempt to maintain some control over the quantity of arguments they may face, debaters have developed adaptive behavior, primarily through the generic argument—any argument within a "deliberative" framework that recurs in fulfilling the discovery of issues. Using the generic argument's standard content or form, the debater can develop arguments that are familiar in their content or function as an aid to the audience's understanding of the issues. This definition has several implications. First, any issue or argument may become generic through the argument's analytic function or repetition of content. Second, generic argument is not an impediment to the discovery of new arguments. Finally, generic argument does not impede other adaptive responses to overload. Other fields will develop responses appropriate to their needs. (HTH)

A description of the Parent University program of the San Rafael (California) City Schools is presented. The Parent University is described as a 1-day event in which parents are offered a variety of seminars and workshops on topics in education and parenting. Materials included in this document are: (1) an overview of the second annual Parent University which was held in 1983; (2) a description of the previous year's event (the first Parent University in San Rafael) including information on how the program was developed and reactions from participants; (3) an outline on how to organize a Parent University; (4) a news release announcing the 1983 Parent University; and (5) a local newspaper article announcing the 1982 Parent University. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community. Identifiers—PF Project, Promising Practices

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: A well-rounded story of the strength of education is being presented by the staff and students of the Ramona Unified School District in Northern San Diego county. Select audiences of service clubs and community groups that have influence on public attitudes are visited by an educational team. Each academic team is composed of 12-18 students representing various grade levels plus select teachers and other staff members. Every academic team gives demonstrations of each major curriculum area during a 30-40 minute presentation. Materials about education are distributed and an invitation is extended to visit the neighborhood school. Benefits of our P.I.E. program have been summarized. It appears that academic team members take more pride in their school and personal achievement after having participated on a team. Parents seem to be spontaneous advocates for quality education after having been involved in a team effort. (We rely on our parents for transportation to

community groups meeting in the early morning or the evening and they stay for each presentation.) The community continues to welcome each team and responds with a greater appreciation for our use of resources. At the same time, support is built for programs that are not well understood, such as bilingual education remedial or enrichment classes. We like being part of a rising tide that renews public confidence in our public schools. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community. Identifiers—National Teacher Examinations, United States v South Carolina

A growing emphasis on teacher accountability, coupled with declining enrollments and reduced revenues, has increased the importance of teacher evaluations as a basis for staffing decisions, even though there is no clear definition of teacher effectiveness. Accordingly, legal standards are provided for the procedural and substantive issues of due process that have arisen in connection with teacher evaluation. State courts have upheld decisions requiring (1) deadlines for completing evaluations, (2) advance notice to teachers of evaluation criteria and procedures, (3) notice of unsatisfactory evaluation and opportunity to defend against charges, (4) reasonable remediation period to correct alleged deficiencies, (5) specification of deficiencies to provide clear guidance for remediation, and (6) an opportunity to obtain assistance in correcting deficiencies. The substantive issues which the courts have addressed are not based on objective criteria for evaluating teacher performance, but rather on the relation of facts to standards individually applied. There must be just cause for dismissal, based on a rational relation between conduct complained of and duties to be performed. The other legal issue discussed involves the use of the National Teachers Examination (NTE) in employment decisions. Although the NTE has no predictive validity for teaching skill, the Supreme Court in "U.S. vs. South Carolina" found that it has content validity in assessing basic knowledge and therefore is rationally related to legitimate state decisions. The first of a three-part series on computer-assisted instruction (CAI), this report describes 11 exemplary programs across the country that involve the use of microcomputers for instruction in computer science, mathematics, and science at the elementary and secondary levels. At the head of each description are the name and address of the school (or consortium or school district) implementing the program and the name and title of a person to contact there for further information. The programs featured include a 5-year computer literacy plan, an inservice staff development scheme, a set of graphic data displays for teaching physics, a computerized math tutorial program entitled "Kids Helping Kids," various programs in computer science and word processing, computer-assisted vocational programs, computer-based adult education classes in business and data management, and a districtwide curriculum plan aimed at computer awareness in elementary school, computer literacy in junior high, and computer science in senior high. Also included is a description of the Minnesota Educational Computing Consortium, a statewide agency devoted to propagating instructional use of microcomputers and producing student-inspired courseware. Additional resources are listed for interested principals, including upcoming workshops and computer periodicals. (TE)

Identifiers—Minnesota Educational Computing Consortium

The second of a three-part series on computer-assisted instruction (CAI), this report focuses on the use of microcomputers in business education, English, social studies, foreign languages, bilingual education, and ESL (English as a Second Language). Since all these areas involve writing, a discussion of word processors and word processing software precedes more specific discussions of courseware in each area. Then seven exemplary programs at various schools around the country are described in detail. These include a 3-year sequence in computer science for business; a word-processor-based typing and accounting program that was extended to include English composition and creative writing; a language instruction program for non-English speakers; a seven-phase scheme for integrating word processors into an English composition curriculum; a districtwide center for coordinating educational technology; the work of an innovative principal in San Jose, California, who has implemented computer-assisted instruction in two different high schools and (at the time of this publication) was organizing an Institute on Microcomputers in Secondary Education; and a 5-year plan directed by a districtwide steering committee on computers. At the head of each description are the name and address of the school or school district implementing the program and the name and position of a contact person. (TE)

Identifiers—Colorado

This paper describes the "District Level Indicators Supporting Quality Schools" and gives suggestions on the use of the instrument. The indicators were developed from research on effective schools and focus on activities and policies supporting quality schools. The instrument is a series of statements of goals, practices, policies, and procedures that help create or support quality schools and is divided into 10 categories. It is intended for use as a district self-study assessment tool. The assessment process can become more meaningful if the school and community take responsibility for the school improvement process itself and the assessment is considered an ongoing process. The object of the instrument is to identify priority areas for improvement or study. The paper includes recommendations for use of the instrument, including: forming a school improvement committee, deciding on a strategy for use of the instrument, orienting the staff, tabulating the results, reaching a consensus rating, displaying the results, and setting up and implementing improvement plans. An extensive bibliography is included. (MD)

This instrument is designed as a district-level self-study evaluation tool. Its purpose is to assist school districts to identify strengths and weaknesses in their programs and thereby help districts work toward improvement and support of quality in their schools. The instrument is a series of checklists organized under 10 categories using 2 rating scales: (1) what is the extent to which this indicator is present in your school district and (2) impact potential. Ratings are based on a 0-3 scale, and instructions are provided for use of the scale. (MD)

Descriptors—Back to Basics, Educational Change, Educational Economics, Educational Objectives, Educational Policy, Educational Trends, Education Work Relationship, Government School Relationship, Reports, School Choice, Secondary Education, State School District Relationship, Student Teacher Relationship, Trend Analysis

Identifiers—Study of High Schools (A)

Seven major trends are reflected in the current task force and commission reports on education. The first, "back to basics," stresses intellectual skills, but often at the expense of the affective domain. The second emphasizes the relationship between education, work, and the economy, but the direction schools should take remains unclear, on account of the rapidly changing economy. The third trend, "authority," is primarily a reaction to the permissive attitudes of the sixties, but the calls for greater discipline are incongruous with recent studies of the adverse effects of too much pressure on adolescents. The fourth trend calls for greater state control of school district policy, but this is contradicted in part by the fifth trend toward greater citizen choice and school variety. The sixth trend is toward measurable results and accountability, while the seventh is toward cost-effectiveness, due to the current economic crunch. While these are the dominant themes of current reports on schooling, there is no overall consensus on what needs to be done; there is, however, agreement that the school structure is seriously flawed and that the remedies needed will be long-term ones. Accordingly, of the eight concluding recommendations offered to principals, the first three concern how to read and respond intelligently to the emerging reports. (TE)

Mastering alternative models of teaching helps build competence and effectiveness in the repertoire of classroom teachers. However, because the attainment of new skills does not by itself ensure transfer to classroom use, teacher training programs should incorporate study of the transfer process itself, reinforced by team effort. Accordingly, strategies are suggested for a collaborative approach to teacher development, involving continuous training and study of both the academic substance and the craft of teaching. Chapter 1 of this inquiry concerns the need to integrate research and practice in learning to teach. Chapter 2 distinguishes between "horizontal transfer" (a direct shift of skill from training to actual use) and "vertical transfer" (the adaptation of skills to fit conditions of the workplace). Chapter 3 concerns attacking the transfer problem by controlling the context of the workplace. Chapter 4 concerns ways of making training more effective: forecasting the transfer problem, overlearning skills, peer coaching, and "executive control." The latter, a key concept, refers to developing a functional and adaptive understanding of a given model. Chapter 5, "Parallels with Athletic Training," is an interview with Coach Rich Brooks of the University of Oregon, focusing on acquisition and incorporation of new skills. Chapter 6 reviews basic principles for increasing learning aptitude and stresses the importance for teachers of continual growth. An appendix reviews the essential literature on teacher training. Education, Enrollment, Information Dissemination, Privacy, Professional Personnel, School Demography, School Districts, School Personnel, School Statistics, State Departments of Education, State Standards, Superintendents

Identifiers—California Basic Educational Data System

This publication provides a general description of the California Basic Educational Data System (CBEDS), standards governing the use of its data, descriptions of the data elements and CBEDS reports, guidelines for access to the data, and a data request form. The CBEDS database consists of three principal files: (1) enrollment and staff data for school districts and offices of county superintendents of schools, (2) school enrollment and staff data, and (3) individual professional assignment and classroom population data. The data may be released in aggregate or partial form to authorized agencies strictly on the basis of bona fide need for information. Only CBEDS staff have direct access to the computer file. The California Information Practices Act of 1977 governs the disclosure of certain CBEDS data, and the maintenance and dissemination of personal information are subject to strict limits. Examples of standard reports prepared from CBEDS data include school profiles, enrollment, ratio of administrators and teachers, salaries of professional staff, characteristics of professional staff, adult education, and equal employment opportunity. Ad hoc reports are drawn from the database as requested by the organizations to be served. (MLF)

Since World War II the United States has become the leader among Western industrial countries in attempting to export its own educational values to developing nations. United States policies, however, have not been based on careful consideration of the specific political, economic, and social realities of these nations. As a result, the educational models and practices of the United States and other industrial nations have met with increasing resistance in developing nations. Despite increased suspicions regarding the intentions of the large industrial nations, developing nations continue to favor strengthened professional relationships. Such international cooperation can flourish in education and other areas, however, only if the industrial nations learn to accept cultural diversity and test their own research paradigms against culturally specific empirical observations from developing nations as well as their own. As a result of such observation and testing, paradigm shifts will occur that will advance knowledge and enable us to meet challenges in education worldwide. (JBM)

Document Not Available from EDRS.

Descriptors—Comparative Analysis, Educational Finance, Elementary Secondary Education, Guidelines, Principals, Public Schools, Salaries, School Districts, Statistical Analysis, Tables (Data)

Identifiers—National Survey Salaries Wages Public Schools

Using the data for elementary, junior high, and senior high principals collected in the National Survey of Salaries and Wages in Public Schools,

1982-83, this report provides an analysis of the various methods used by school systems to structure salary schedules for principals, the various provisions of these schedules, and the levels of dollar amounts for key points on the schedules. Of the 1,120 school systems responding to the national survey, 347 provided schedule documents utilized in this analysis. Primarily, this report provides a system-by-system listing showing, where possible, both minimum and maximum scheduled salaries for principals and considers salary differentials for academic preparation, school size, number of days on duty, relationship to teachers' schedule, responsibility ratios, and other factors. Nine summary tables and three graphs show: average scheduled salaries and salary ranges for principals by academic preparation levels and by relationship to teachers' schedules; the mean dollar amounts of annual increments; and methods of establishing salary differentials by school size and other factors. Examples of various types of salary schedules are provided. An appendix provides guidelines and procedures from state and national levels for designing salary schedules for principals. (PB)

ington, D.C.

Pub Date—83

Note—57p.

Pub Type—Guides - Non-Classroom (055)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Accountability, *Catholic Schools, Community Involvement, Educational Improvement, Elementary Education, *Evaluation Criteria, *Evaluation Methods, *Evaluation Needs, Religious Education

Identifiers—National Catholic Educational Association

This booklet examines the need for school evaluation in the Catholic elementary school, the basic steps in the evaluation procedure, relevant evaluation criteria, and various evaluation instruments. The document suggests that regular school evaluation is needed to facilitate improvement, to provide a means of accountability, to foster community involvement, and to build public relations. To evaluate a school, educators must decide when to evaluate, determine the scope of the evaluation, review applicable criteria, select an appropriate instrument, identify persons to be involved, plan communication, complete the self-study process, verify the self-study report, design and implement the improvement plan, and review progress. Educators should also remember that evaluation is a continuing process. Evaluative criteria to be considered are personnel, the instructional program, religious formation, community, social ministries, and worship. The final sections of the booklet consider evaluation instruments developed by the National Catholic Educational Association and by other Catholic elementary schools in the United States. A glossary of terms is provided. (PB)

The principles and practices of Catholic school supervision, as distinguished from school supervision in general, are predicated on a special Christian view of education, emphasizing the unique value, diversity, and personal growth of pupils and teachers alike within a mutually caring Christian community. Accordingly, an approach is developed for combining four different kinds of supervisory support, depending on the needs of the teachers. The first, "clinical supervision" is a systematic program of intensive support to help beginning teachers improve professional skills. The supervisor visits classrooms frequently, reviews plans and objectives,

analyzes data, and confers regularly with the teacher. The second, "collaborative professional development," involves small groups of teachers working together for their mutual improvement. The third, "self-directed professional development," is a process by which a teacher systematically plans and carries out a professional growth program. The fourth, "administrative monitoring," involves brief but systematic classroom visits by administrators to assess the educational climate and informally evaluate programs. Remaining chapters are devoted to strategies for implementing this differentiated program and to a resource guide to Catholic educational administrators throughout the country. A bibliography is included. (TE)

This document provides eight lessons intended to improve the functioning of school boards and education committees for Catholic schools. Each lesson consists of three parts: a reading or activity to be done by the members in preparation for the lesson, a study activity to be done at the board meeting, and a reading or exercise to be done after the meeting. Notes for each lesson are also provided to aid the person responsible for leading the presentation. The following lessons are provided: responsibilities of the school board; board policy and administrative regulation; developing an agenda for the board meeting; getting things decided (the consensus process); church documents on Catholic education; evaluating the board's performance; setting goals for the board; and the key relationships among principal, pastor, and board. Descriptors—Administrator Evaluation, Administrator Guides, Administrator Responsibility, Administrator Role, *Catholic Educators, *Catholic Schools, Compensation (Remuneration), Elementary Secondary Education, *Occupational Information, Postsecondary Education, *Religious Education

In five sections, this handbook provides information for directors of religious education (DRE's) in Catholic schools covering the catechetical ministry and the DRE, the functions of the DRE, hiring procedures, compensation and benefits, and evaluation. Section 1 discusses catechesis in the Church today, the DRE as minister of the Word, and fundamental qualities suggested by authoritative Church documents to be characteristic of the life and work of the DRE. Section 2 explores the functions of the DRE in the parish community, policy-making and management responsibilities, and the three major roles generally accepted as designating parish leaders in religious education programs: director of religious education, coordinator of religious education, and administrator of religious education. Section 3 advises prospective DRE's on methods of choosing a parish, job interviews, and contracts. Section 4 offers a rationale for providing adequate compensation for DRE's and examines specific provisions of a comprehensive job description (salary, personal

and professional benefits, and working environment). Section 5 discusses evaluation of the DRE by and for the parish community and the DRE's responsibility in evaluation. Five appendices provide a bibliography, parish profile, methods for developing a job description, projected budget, and sample salary scales. (PB)

This review is a comprehensive assessment of the effectiveness and efficiency of education in the Australian Capital Territory (ACT) government high schools, addressing basic questions and making recommendations concerning goals, school structure, provision of resources, curriculum, and educational outcomes. It is divided into 13 chapters covering the following topics: (1) the beginnings (historical background); (2) school autonomy and the Authority; (3) parents, power, and schools in the ACT; (4) educational standards in times of change; (5) purpose and expectations in high schools in the ACT; (6) the high schools in action; (7) student assessment and reporting in high school; (8) students and the high schools; (9) teachers in the ACT high schools; (10) making decisions on high school curriculum; (11) implications for the system; (12) resources and financial responsibility; (13) conclusions. Three appendices provide a bibliography, submissions received, and a description of the research methodology. The text includes 22 tables and 6 charts. (TE)

Identifiers—*Australia (Australian Capital Territory)

This document consists of two critical papers on schooling in the Australian Capital Territory (ACT), followed by reports on specific subject areas. The first paper, "If Wishes Were Horses: The Parent Role in a Participative System of Schooling," by C. Blakers, is a comprehensive examination of concepts, relationships, and issues concerning parents as an integral part of the school system. Chapters are as follows: (1) an independent education authority for the ACT; (2) the family and the school; (3) concepts of collaboration; (4) participative decision-making; (5) the participative system; (6) the neighborhood school; and (7) the role of parent organizations. The second essay, "What Is the Ideal Years 7-10 Curriculum in the ACT?" by C. W. Collins, is a brief opinion paper on junior secondary curriculum reform in public schools. After noting the crisis of purpose in current educational practice, the author reassesses basic assumptions in curriculum planning, based on a review of public opinion research, historical perspectives, and parent perspectives. He recommends a new approach based on an understanding of what is powerful and what is

trivial in knowledge. The subsequent "Reports of the Interstate Subject Consultants" consist of reviews and recommendations for each subject area of the ACT curriculum: art, English, history, home economics, industrial arts, languages, mathematics and computing, music, physical education, science and agriculture, and social science. Descriptors—Career Counseling, *Competence, Counselor Evaluation, Counselor Role, *Guidance Objectives, *Guidance Programs, Interpersonal Competence, Models, Program Evaluation, *School Guidance, Skill Development, Student Needs, Study Skills, *Systems Approach

Identifiers—*Competency Based Guidance, Maryland (Howard County)

Under development in a Maryland district, the Competency-Based Systems Oriented Guidance Program described here combines (1) a focus on helping all students become competent in knowledge, attitude, and skills and (2) a systems orientation addressing the entire spectrum of student life by providing a common language, methods of information exchange, and encouragement to make long range personal and vocational plans. Following a background review, a figure representing the program as a wheel is explicated. Elements of the program (discussed and exemplified by additional charts) include the guidance philosophy, a conceptual model of guidance, district and school guidance goals, and student competencies. Additional components of the wheel include a glossary, management systems, counselor agreements, needs data, individual school and counselor plans, student monitoring, an advisory council, and a master calendar of events. Other figures appended include the table of contents and a subheading contents page from a district guidance handbook. It is concluded that advantages of the program include built-in evaluation at various levels, flexible scope, adaptability to changed system needs, accountability, and facilitation of a new attitude toward guidance as an integral part of the academic program. Identifiers—PF Project

Because positive teacher-parent relationships have an effect upon student achievement and upon public opinion of the schools, numerous practical suggestions for improving home-school communication are presented. The following four areas are discussed: (1) educating teachers about their roles as public relations agents; (2) improving home-school communications; (3) recognizing good teachers and positive communicators; and (4) encouraging teachers to recognize the uniqueness of a particular child and his/her achievements. Identifiers—PF Project

A model which secondary school administrators, teachers, and students can use for school activities programs is provided in this publication. Thirteen attributes of a successful program are described along with the roles which student leaders, superintendents, boards of education, principals, school activity advisors, and coordinators ought to play in such programs. The central and coordinating function of the student government is emphasized. Brief suggestions for evaluating both the school activities program and the student government are given and a publication of the National Association of Secondary School Principals is noted as a valuable resource. A resource list with names, addresses, and telephone numbers of 10 organizations concludes this guide. (JH)

Recommendations for improving communications skills are offered. It is stated that the process of communicating involves passing information and understanding from one person to another; a one-way process of sending out information is not good enough. To help principals communicate more effectively with their staff, recommendations are offered on the following topics: (1) improving listening skills; (2) making sure that the message is getting through to the other person; and (3) deciding whether to use oral or written communication. A list of reasons why misunderstandings occur is also included. (DC)

Descriptors—Administrator Guides, *Board of Education Role, Decision Making, Declining Enrollment, Elementary Secondary Education, Guidelines, *School Buildings, *School Closing, School Community Relationship

Identifiers—*Leasing, PF Project, *Sales Transactions

Recommendations on leasing or selling a surplus school building that has been closed due to declining enrollment are offered. Questions which need to be addressed in deciding which option to pursue are presented including whether it would be better to use the building for community purposes than to lease or sell it. The advantages and disadvantages of both leasing and selling are listed. Specific steps to follow after making the decision are provided. Steps common to both leasing and selling include: getting an appraisal, setting a price, preparing a booklet describing the property, working with economic development groups, advertising the property, meeting with prospective lessees or purchasers, developing a lease or sales agreement, approving the agreement at a board meeting, and obtaining the approval of or submitting the data to the proper

state agency. Steps which are specific to leasing are: reaching agreement on who is responsible for building modifications and how much the modifications will cost, and determining if a zoning change is necessary. Steps which are specific to selling are: preparing specifications and putting the property out to bid, and deciding whether or not to accept the bids. (DC)

Identifiers—PF Project

Boards of education often feel that consultants are high-priced or of questionable quality; however, reasonably priced, highly competent consultants are available. Some issues facing school districts can best be approached using the specialized talents and objectivity available only from consultants. When a school board has decided that it needs a consultant, it should seek recommendations on who should be hired. The names of good consultants quickly emerge with strong endorsements from prior clients. The next step is to follow up on the recommendations by checking references and resumes. When the list of prospective consultants has been narrowed to two to four candidates, interviews should be scheduled. The candidates should be asked to prepare a detailed outline of their proposal. When a final selection has been made, the proposal should be reworked into contract form with someone from the board acting as the official contract person. Some portion of the fees should be designated for payment only after the final report has been accepted. Consultants can be a valuable resource if thoughtful planning is used in their recruitment. Education, *Employer Employee Relationship, *Employment Qualifications, Guidelines, Human Resources, *Personnel Selection, Problem Solving, Professional Personnel, *Professional Services, School Districts, Specialists

Identifiers—PF Project

Guidelines which explain five phases of the consulting process are offered to educators contemplating the employment of consultants. Discussion of the first phase, "contact/entry," contains seven tips to consider before hiring a consultant and six tips on forming the base of the working relationship with the consultant. The second phase, "diagnosis," is described as the process of determining by examination the cause and nature of the client's problem; six guidelines are offered for the successful completion of this phase. The third phase, "response," is discussed as a critical portion of the consulting experience as the solutions sought in the project are presented for consideration; nine questions are offered to help ensure satisfaction with the consultant's performance. The fourth phase presented is "disengagement" which requires the evaluation of results to see if a "response" has been successful, and if there might be a further need for "response" revision and/or additional resources. The last phase is "closure" which is the termination of the working relationship. Four activities are given which should be included as part of the "closure" by the consultant. Concluding this paper is a consultant's resource list of 16 books. (EM)

Descriptors—Administrators, Boards of Education, Collective Bargaining, Elementary Secondary Education, Guidelines, *News Media, *Political Power, Public Relations, *School Community Relationship, School Districts, *Teacher Associations, Teacher Militancy, *Teacher Strikes, Unions

Identifiers—*Advocacy Communication, *Advocacy Planning, PF Project

Guidelines are given to school board members and administrators on using advocacy communications in dealing with teachers' strikes. Strikes are described as staged media events and extensions of the collective bargaining process. An educational association's "game plan" is outlined which summarizes the five central themes used by most associations to prepare the campaign against the school district. Tactics used during negotiations are listed including the seven deadly rules or power tactics from Saul O. Alinsky's book and training seminars entitled "Rules for Radicals." Ten telltale signs shown by teachers which indicate that a strike is drawing near are listed. Advice is provided to school districts on preparing a defense which consists of using "offense" by having a good public relations program to present their position. Advocacy communication is recommended and three steps are given in planning an effective campaign. The final advice includes three points to consider when preparing for a strike or any other crisis. Concluding these guidelines is a list of eight references. (EM)

tion, School Districts

Identifiers—PF Project

Suggestions to boards of education on handling an impasse situation in bargaining are given. Boards are advised to fully assess the possibility of gaining an acceptable agreement at the beginning of the negotiation session. If this cannot be done, six assumptions are offered as good advice in dealing with all impasse situations. Advice written by Hugh Casey, labor relations consultant, is presented regarding the avoidance of impasse. This advice includes six points on how to obtain a mutually acceptable solution and six points on how to determine if impasse is the next step when an agreement has not been made. A brief summary is given which warns that the longer contract talks last, the more the board loses in money and prerogatives. Information about the book, "The Art and Science of Negotiation" by Howard Raiffa-Cambridge, is provided. The book is suggested as background reading. (EM)

Identifiers—PF Project

A wide variety of internal and external communication methods used by the Piqua City School District (Ohio) are described. A philosophy statement is followed by descriptions of the roles of the board of education, the community, the teachers, the superintendent, and the media in an effective communications program. Among the 41 external communication methods which are used to develop positive relationships with the community are personal contact by school administrators, media publicity, volunteer programs, and recognition for assistance to the schools. Seventeen methods of internal communication with school staff are described which emphasize the recognition of staff contributions and the development and maintenance of good administrator-staff relationships. Efforts to make board of education meetings as open to the community as possible and a program to recognize positive student actions are also described. (DC)

Identifiers—PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: As a part of its School Improvement Program, James Monroe Junior High School planned to improve its school climate. Since the physical school environment was devoid of landscaping and did not provide places for student socialization, all interested groups (PTSA, student council, students, staff, and faculty) agreed that the improvement of the buildings and grounds would improve student morale and inspire student caring about the school environment. Money was allocated from several sources to purchase shrubs, trees, and plants which would change the desert-like appearance of the campus. Wood and pipe were purchased to make benches to be placed around the trees. Students then began building the benches as a part of a shop class. In order to work on the qualities of responsibility and planning, several students were designated student supervisors and worked with their "crews" in preparing benches and then planting trees and erecting benches around them. In the meantime, the PTSA approved the installation of a watering/sprinkling system so that the summer upkeep of the landscaping would be simple. A weekend work party of faculty and students facilitated the removal and replanting of healthy trees and shrubs donated by our local military facility during the demolition of an old housing area. During this same weekend, the city and the local electric company donated several truckloads of dirt to level out and build up low-lying areas of the campus. Our final step was the concreting of an area around the trees and benches to create a "quad." Since the work has been completed, the students are using the benches at lunch time for a place to gather and socialize away from the classrooms. The students are obviously proud of their participation in this beautification process. The benches have not been defaced and the trees and shrubs have not been damaged. The students seem truly proud of their accomplishments and take pride in what they have done for themselves and their school. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community. Identifiers—Southeastern Regional Council Educ Improvement, *Southeastern States

The reluctance of the Southeast to increase educational spending is closely linked to the region's lagging behind the rest of the nation in quality of education and hence in overall standard of living. Six "myths" about educational spending, widely held in the Southeast, are here addressed: (1) That educational expenditures, worthwhile in the long run, are burdensome in the short run. In reality, dollars spent on education create jobs, purchase goods and services, and contribute to local economies. (2) That educational spending has greatly increased. In truth, increases have been modest

relative to inflation and new demands. (3) That higher salaries have improved the economic status of teachers. In fact, because of inflation, teachers' purchasing power has declined, and too little has been spent for support services. (4) That the Southeast spends proportionally more than other regions. Actually, expenditure per capita corresponds to the national average. (5) That the Southeast has been closing the gap. In reality, unless spending increases dramatically, the region will remain in last place. (6) That the Southeast cannot afford increased educational spending. On the contrary, one cent more per dollar of personal income could turn mediocrity into excellence. (TB)

Identifiers—Southeastern Regional Council Educ Improvement, United States (Southeast)

Through a number of measures, both quantitative and qualitative, this progress report explores the achievements of Southeastern public schools in meeting the continually expanding goal of quality education for all citizens. Quantitative figures are shown, regionally and state by state, for ages of compulsory attendance, public and private school enrollments (1980), public school enrollment per population, and literacy of population (1900 and 1980). Qualitative measures of educational progress are provided by graphs and charts illustrating percent of high school graduates in the United States population (1870-1970), high school graduates 25 and older (1970 and 1980), median school years completed (1950 and 1980), public kindergarten enrollment (1970 and 1980), black adults completing four or more years of high school (1970 and 1980), percentages of nonwhite populations, numbers of exceptional children served in public school programs, percent of children served in different educational environments, pupil/teacher ratios, minimum competency testing, and per capita personal income levels (relative to the nation as a whole). Conclusions derived from these statistics suggest three major challenges confronting education in the Southeast: (1) overcoming the legacy of poverty, (2) helping the nation compete in a highly technological world society, and (3) providing quality education with decreasing public resources. Descriptors—Academic Achievement, Athletics, Educational Assessment, Eligibility, Higher Education, Literature Reviews, Minimum Competencies, National Surveys, Principals, Secondary Education, Tables (Data)

Identifiers—National Collegiate Athletic Association Rule 48

A review of literature and a survey of approximately 40 percent of 4,688 public, private, and parochial school principals and 60 National Collegiate Athletic Association (NCAA) Division I institutions provide information on the effects of NCAA Rule No. 48, which mandates new academic criteria for the athletic eligibility of college entry level students. Limitations include guaranteed anonymity of respondents and variable location, size, and structure of responding institutions. The survey instruments are designed to collect demographic data

about schools and respondents and to focus on such questions about the rule as the degree of awareness, approval/disapproval, and methods to disseminate information. The report concludes by summarizing major conclusions and recommending such measures as increased dissemination of information about the rule and analysis of student records to determine how students will be affected. Eleven tables include data on geographic distribution, school size, team sport distribution, tenure of respondents, race/sex of respondents, number of grants-in-aid recipients, and recipients not meeting 2.0 grade point average requirements. Four appendixes present responses to the secondary school survey, comments from secondary school respondents, responses to Division I Institution I and Division I Institution II surveys, and the investigative staff. Theory X and Theory Y in the Organizational Structure.

Pub Date—Jan 82
Note—16p.; Synopsis of a doctoral thesis in behavioral science.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Elementary Secondary Education, Employer Employee Relationship, Human Relations, Organizational Climate, Organizational Development, Organizational Theories, Organizations (Groups), Participative Decision Making, Postsecondary Education, Power Structure, Pyramid Organization

Identifiers—Cognitive Dissonance

This document defines contrasting assumptions about the labor force—theory X and theory Y—and shows how they apply to the pyramid organizational structure, examines the assumptions of the two theories, and finally, based on a survey and individual interviews, proposes a merger of theories X and Y to produce theory Z. Organizational structures based on theory X assume that people are willful, lazy, and require clearly defined lines of authority and control. Theory Y emphasizes human interaction and assumes that people like to work, seek responsibility, and are capable of self-control. Theory X assumptions characterize today's predominant pyramid organizational structure, a structure which is not conducive to the implementation of theory Y assumptions. Moreover, to completely change widespread and effective pyramid structures might be unwise. Nevertheless, sometimes theory X assumptions work best while in other situations theory Y assumptions are more appropriate. The document suggests, therefore, that organizations adopt a more flexible attitude midway between theories X and Y. This middle point is termed theory Z and is based on flexible, situational management, which resolves certain conflicts between theories X and Y. (PB)

Descriptors—Block Grants, Budgeting, Case Studies, Categorical Aid, Educational Equity (Finance), Educational Finance, Educational Objectives, Educational Policy, Elementary Secondary Education, Financial Problems, Retrenchment, School District Autonomy, School Districts, State Federal Aid

Identifiers—Education Consolidation and Improvement Act 1981

Based on data from document reviews and interviews from 12 school districts in 3 states, this interim report presents findings from the first year of implementation of Chapter 2 of the Educational Consolidation and Improvement Act (ECIA) of 1981. The initial section of the report examines the redistribution of federal funds to local districts, the attainment of national education priorities, local flexibility in decision-making, and the reduction of administrative burdens. The second section, based on the premise that the local context significantly mediates Chapter 2's effects, presents case studies of five school districts that lost funding in the switch from antecedent programs to the block grant. These

districts are examined because the current mood in Washington still supports funding cuts for social services and because adjustments in Chapter 2 being discussed at the state and federal levels appear to focus on ways to compensate losers. The third section provides a discussion of the case studies and tries to account for differences in impacts the systems felt. The conclusion examines subsequent policy adjustments. Two appendixes provide research methods (the study's general approach, data collection procedures, and analysis methods) and capsule descriptions of the 12 school districts. (PB)

Identifiers—Des Moines Public Schools IA

Three hypothetical scenarios for the 1980's are presented as tools for exploring the future of the Des Moines, Iowa, Independent Community School District. Each is written in the past tense as a "history" and is followed by a set of implications for education. The first scenario conveys an optimistic view of current trends, suggesting that the eighties will be a prosperous decade characterized by the emergence of a new economic order based on information, with education as its foundation. Implications include increased diversity in educational needs, increased use of computers, and a retooling of educational objectives. The second, pessimistic scenario projects current economic problems into the future, positing a depression in the latter part of the decade. Educational implications include limited finances, teacher shortages, and increased special education enrollment. The third, "static view," scenario projects what is likely to occur if socioeconomic conditions remain largely as they are. The dominant likelihood for education will then be continuing budget restrictions. A working paper is included, consisting of 11 questions pertaining to educational planning, to be filled out in the context of each scenario. (TE)

Identifiers—Iowa (Des Moines)

Collected in this report are the Des Moines, Iowa, school district's goals and division objectives for 1982-83 and building objectives for fulfilling these goals. A prefatory statement by the superintendent describes a district planning and management system of continuous goal and objective setting combined with evaluation of progress in improving educational services. District goals are: (1) determining the future direction of the instructional program and guidance and other support programs, (2) improving the level of public understanding and support, (3) designing the educational program to ensure student achievement of district objectives and to make the most effective use of staff and student time, (4) providing the staff with adequate support to facilitate implementation of changes, and (5) implementing specific plans for the new delivery system for vocational/technical education and tran-

sitional schools. A chapter on division and departmental objectives identifies administrators responsible for implementing objectives for each goal. A school-by-school report of building objectives comprises the bulk of the document. A related report is devoted to assessment of progress toward these goals. (MJL)

Identifiers—*Iowa (Des Moines)

As a function of Des Moines, Iowa's, planning and management system for improving educational services through coordinated, continuous planning and evaluation at all levels from superintendent to classroom teacher, this report measures the success of district administration and individual schools in achieving stated objectives for 1982-83. Five board-determined goals are included in a related document. Division and departmental objectives toward realizing these goals are listed here, accompanied by brief summaries of progress made. The same format is used to assess achievement of building objectives by each school. An annual financial statement for the district operating fund is appended. (MJL)

Identifiers—Minnesota Educational Computing Consortium

The last of a three-part series on computer-assisted instruction (CAI), this report describes microcomputer applications in special education, music, visual arts, speech arts and drama, home economics, and industrial/vocational arts. Under each subject heading, current and developing computer applications are discussed and specific courseware developed by MECC (Minnesota Educational Computing Consortium) is described. In special education, computer systems have been developed to aid blind, deaf, speech-impaired, motor-control handicapped, and intellectually handicapped students. Developments in the fine arts include electronic music synthesizers, a computer-feedback keyboard instrument that teaches how to play, computer graphics for visual arts, and set design courseware for drama. In the practical arts, courseware has been developed for a wide range of home economics and industrial/vocational arts applications, from nutrition and family planning to driver training, money management, and home improvement.

Seven examples are then provided of programs currently operating in these areas at high schools across the country. At the head of each description are the name and address of the school or agency and the name and position of a contact person. (TE)

Descriptors—*Computer Programs, Elementary Secondary Education, *Evaluation Criteria, *Evaluation Methods, Quality Control, Specifications, Standards

Identifiers—Courseware Evaluation, Microcomputer Software and Info for Teachers

Two instruments have been developed to aid teachers and other educators in evaluating educational software and courseware: the "Courseware Description" form and the "Courseware Evaluation" form. Complete instructions for using both forms are provided in this guide, along with the forms themselves. Prior to the instructions is an introductory section explaining the purpose of the guide, describing the four-stage evaluation process (sifting, description, peer review, and indepth evaluation), and providing a basic definition of terms. The instructions themselves include thorough explanations of each descriptive and rating criterion on the two forms. Then five sample reviews are provided for the following courseware: "Bumble Plot" (elementary mathematics), "Word Games" (spelling), "Krell's College Board SAT" (test preparation), "Three Mile Island" (physical science), and "Dragon Mix" (elementary mathematics). A list of International Council for Computers in Education (ICCE) member organizations is provided on the inside back cover. (TE)

This booklet is intended to acquaint educational policy-makers with some of the current roles and potential applications of computers in the curriculum, and to encourage them to initiate actions that will lead to proper and effective instructional use of computers in school systems. It is organized as a series of questions and answers designed to give an overview of computers in education, with emphasis on instructional use. For each question, a brief answer is provided in boldface, followed by a more detailed discussion. Part I answers basic questions about computers, computing, hardware, software, and programming languages. Part II covers instructional use of computers, including the kinds of problems they can solve, the categories of educational use, the role they play in problem solving, their use as learning aids, and sections addressing computer education and calculators. Part III is devoted to the

problems and procedure for developing appropriate goals, followed by a discussion of anticipated costs. Part IV consists of nine appendixes, seven of which are editorials by the author reprinted from "The Computing Teacher," while the remaining two are a brief glossary and a guide to periodical literature. A general outline of the topics that might be covered in a computers and computing course for high school students is provided. Topics are listed in the order in which they should be taught, and the relative amount of time to be spent on each topic is suggested. Seven units are included in the course outline: (1) general introduction, (2) using computers for learning, (3) information retrieval, (4) computers in creative arts, (5) modeling and simulation, (6) artificial intelligence, and (7) conclusions. The units are subdivided into anywhere from two to seven lesson plans, each of which emphasizes three out of the following four strands of content: applications, programming, computer environment, and social impact. Lists of resource books and periodicals are provided at the end. (TE)

Descriptors—Autoinstructional Aids, *Computer Assisted Instruction, *Computer Programs, Elementary Secondary Education, *Microcomputers, Prewriting, Programmed Tutoring, Programming, Student Writing Models, *Writing (Composition), Writing Exercises, *Writing Instruction, *Writing Processes

This volume consists of nine conference papers and journal articles concerned with microcomputer applications in the teaching of writing. After a general introduction entitled "Computer-Assisted Composition Instruction: The State of the Art," by Robert Shostak, four papers are devoted to how computers may help with the writing process. In "Computer-Assisted Prewriting Activities: Harmonics for Invention," Hugh Burns describes the computer as a tool for helping writers discover, arrange, and style ideas by means of interactive questioning strategies. A similar heuristic device for writing about literature is described by Helen Schwartz in "But What Do I Write—Literary Analysis Made Easier." In "Computers and the Composition Process: An Examination of Computer-Writer Interaction," Earl Woodruff identifies three ways a computer can help students write: as consultant, questioner, and collaborator. Then William Wresch, in "Writer's Help: A System Approach to Computer-Assisted Writing," employs computer programs to help students pick a subject, answer questions about it, and organize their ideas in a rough draft. The next three articles concern courseware design, beginning with an overview on "Design Considerations" by Alfred Bork, followed by articles on "Evaluating Textual Responses" by Joseph Lawlor and "Developing Interactive Language

Experiences for the Computer" by Gloria Kuchinskas. The volume concludes with an essay on "Courseware Selection" by Ann Lothrop, followed by a list of computer-related journals and biographical notes on the authors. (TE)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Computer Assisted Instruction, *Computer Literacy, *Computer Oriented Programs, *Computers, Curriculum Development, Educational Technology, Elementary Secondary Education, *Futures (of Society), *Programming, Student Teacher Relationship, Technological Advancement

Intended for elementary and secondary teachers and curriculum specialists, this booklet discusses and defines computer literacy as a functional knowledge of computers and their effects on students and the rest of society. It analyzes personal computing and the aspects of computers that have direct impact on students. Outlining computer-assisted learning (CAL), the author delineates two types: tutor mode CAL (the computer imparts knowledge to the student) and tutee mode CAL (the student directs interaction with the computer). Discussing the use of computers as an aid to problem solving in the classroom, the author predicts it will substantially change parts of the curriculum. The discipline of computer and information science is a new and important discipline, and high schools may need to provide such courses as part of computer literacy. Describing entertainment uses for the computer, the author shows there is no clear dividing line between entertainment and education. Students understanding the computer's potential for change are better prepared to plan their future. The booklet includes a glossary of computer terms. (MD)

Pelle, Howard A.
Computer Metaphors: Approaches to Computer Literacy for Educators.
International Council for Computers in Education, Eugene, Ore.

Pub Date—84

Note—49p.

Available from—Publications, International Council for Computers in Education, 1787 Agate Street, University of Oregon, Eugene, OR 97403 (\$6.00 prepaid; quantity discounts; on non-prepaid orders, add \$2.50 postage and handling).

Pub Type—Opinion Papers (120)—Guides—Non-Classroom (055)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Computer Assisted Instruction, *Computer Literacy, *Computers, Educational Technology, Elementary Secondary Education, *Instructional Improvement, *Metaphors

Because metaphors offer ready perspectives for comprehending something new, this document examines various metaphors educators might use to help students develop computer literacy. Metaphors described are the computer as person (a complex system worthy of respect), tool (perhaps the most powerful and versatile known to humankind), brain (both brain and computer being excellent control devices), map (showing the locations and connections between various centers of knowledge), glass box (intended to reveal rather than conceal), vitamin (providing some essential vitamins for the educational diet), palette (for the creative artist), mentor (having some of the qualities of a good teacher), and catalyst (for revitalizing education).

Among other computer literacy metaphors briefly noted are the computer as hydraulic system, pupil, toy, and idol. The document concludes that educators must think about how to go beyond metaphor to a more substantial understanding of computer science, information theory, and applications of advanced technology. Descriptors—Calculators, *Computer Assisted Instruction, *Computer Literacy, Computer Managed Instruction, *Computer Oriented Programs, Computer Programs, Elementary Education, *Instructional Improvement, Programming Languages

In three parts, this booklet provides elementary teachers with definitions of essential computer terminology and examines instructional uses of computers and computer-related activities. Terms defined are computer, interactive computing, computer hardware, computer software, and programming languages. Part 2 explores the main categories of the educational use of computers (administrative, instructional, and research), the impact of computers on the curriculum (stressing the importance of computers as problem-solving tools), computers as aids to instruction (including computer-augmented learning, computer-managed instruction, and computer-assisted instruction), computer literacy (stressing student awareness and specific instruction in precollege education), the role of calculators in elementary education, and the need for elementary school teachers to be calculator and computer literate. Part 3 contains a variety of computer-related activities that can be used in an elementary school or in a teacher training setting. The need for access to computer equipment and the degree of teacher knowledge vary according to the activity. The booklet includes an appendix with references, a glossary, and an 11-entry guide to periodical literature dealing with pre-college instructional uses of computers. (PB)

Designed to help elementary and middle school teachers increase their level of computer-education literacy, this book discusses the capabilities, limitations, applications, and possible impact of computers in education. Chapter 1 briefly defines what a computer is and explains the book's goals and applications. Chapter 2 provides a technical overview of microcomputers and computer software and hardware, an appendix on calculators, and discussions of computer output devices, the computer's central processing unit, computer memory, and videodisks. Following chapter 3's demonstrations of how computers can provide "automatic flashcards" for students, chapter 4 describes a variety of educational

computer games. In chapter 5, the author reviews the history of automated symbol manipulation and the development of computer languages such as FORTRAN and BASIC. Chapter 6 focuses on the use of computers for problem solving and outlines several possible applications. Chapter 7's discussion of computer and information science includes attention to modeling and simulation, information retrieval, computer graphics, artificial intelligence, and computer science's educational implications. Chapter 8 is devoted to the future of computers in business, industry, and education. The book concludes with an appendix on precollege computer literacy. (JBM)

Addressed to the parents of children taking computer courses in school, this booklet outlines the rationales for computer use in schools and explains for a lay audience the features and functions of computers. A look at the school of the future shows computers aiding the study of reading, writing, arithmetic, geography, and history. The features of computers are then covered in two chapters: the first on the history and distinctive functions of computer systems, and the second on the properties of computer hardware and software, including the general problem solving strategies used by programmers. The three main instructional uses of computers—in computer-assisted learning, problem solving, and literacy—are then explained, with discussions of the realistic goals for computers in education and the essential elements of a successful programming curriculum. The author also points out what parents can do to help their children learn about computers, including using computers in the public library or science museum, or placing computers in scout troops and summer camps. To facilitate computer education at home, the final section discusses the major considerations in buying and using a home computer. An article by Merle Marsh, entitled "Comes the Dawn (If Only I Can Find the Switch)," about a mother's experiences in becoming computer literate is also included. (JW)

Does Money Make a Difference in the Quality of High School Education? A Report by Twelve New Hampshire Citizens Based on Visits to Eight Public High Schools.

New Hampshire Univ., Durham. Center for Educational Field Services.

Spons. Agency—Charles F. Kettering Foundation, Dayton, Ohio.

Pub Date—Mar 84

Note—31p.

Available from—Publications, Center for Educational Field Services, Morrill Hall, University of New Hampshire, Durham, NH 03824 (\$2.00).

Pub Type—Reports—Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Case Studies, Educational Equity (Finance), Educational Finance, Educational Improvement, *Educational Quality, Expenditure Per Student, Financial Support, High Schools, Public Schools, School District Spending, *School Effectiveness, School Support

Identifiers—New Hampshire

Eleven residents of New Hampshire, representing business, education, parents, and state government, visited eight high schools in the state to determine if differences in school budgets affected the quality of education. Members of the study team spent one day in each school and weighed data on staffing, educational opportunities and results, teaching loads, and dropout rates. They compared low-ex-

penditure with high-expenditure schools through statistics and observations. They found that although school quality may be enhanced by such factors as community values, administrative leadership, and faculty commitment, more financial support for a school generally leads to more and better educational opportunities for students—a condition that in turn leads to better educational quality. Included are descriptions of each of the high schools visited and a compilation of comparative data. (JW)

The Private School Movement in Alberta.

Pub Date—Dec 82

Note—23p.; Document may not reproduce well due to small print.

Journal Cit—*Alberta Journal of Educational Research*; v28 n4 p315-36 Dec 1982

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Board of Education Policy, Enrollment, Enrollment Influences, Foreign Countries, Parent Attitudes, Parent School Relationship, Parochial Schools, Private School Aid, Private Schools, Public Schools, State Aid

Identifiers—Alberta

The author provides a comprehensive overview of trends in private school growth and enrollments, and defines the issues surrounding the controversy between private and public schools in Alberta, Canada. Statistical information about numbers of private schools in Alberta, their funding, and the makeup of their students was obtained from Alberta provincial studies; views regarding private schools were also obtained through questionnaires sent to 42 private schools, 61 parents of private-school students, and 54 public school boards in Alberta. Statistics show that the number of private schools increased during 1978-81, as did the number of private-school students. The increase was caused by religiously oriented private schools, which increased their enrollments over 60 percent from 1976 to 1983. Private-school parents reported that they enrolled their children for more Christian education than could be found in public schools. Responses from public school boards indicate that they generally accept the existence of private schools as a political reality but note a potential problem in continuing sufficient funding of public schools while private schools are also receiving government grants. (JW)

Davies, John L.

The Practice of Educational Consultancy in the Context of Policy Formation.

Pub Date—[82]

Note—22p.

Pub Type—Reports - Evaluative (142) — Guides - Non-Classroom (055)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Consultants, Decision Making, Educational Administration, Governance, Organizational Climate, Organizational Communication, Organizational Theories, Participative Decision Making, Policy Formation, Political Socialization, Politics of Education, Power Structure, Professional Services

Identifiers—Enderud (H G), Four Phase Model (Policy Formation)

The effectiveness, behavior, and role of the consultant as policy advisor is examined in light of three operating assumptions: (1) that educational organizations are subject to politicization; (2) that the consultant's primary role is to assist in nonroutine, potentially controversial policy decisions; and (3) that the consultant must therefore know the political dynamics of policy-making. Section 1 addresses the political context, including factors contributing to politicization and the nature of problems for which organizations retain consultants. Section 2 concerns problems for the consultant arising from the "anarchy trap," or inherent limitations on manageability in an educational organization due to the diffuse structure of responsibilities and correspondingly weak feedback mechanisms. Accordingly, section 3 provides three choices of approach for the educational consultant: (1) accept the inevitabilities of the "anarchy trap" and restrict his/her role to researcher, catalyst, resource, or counselor; (2) attempt to redefine or clarify the organizational structure; (3) use the organizational ambiguities creatively to "go with the flow." Section 4 provides a four-phase model for policy decisions: "garbage can," negotiations, persuasion/legitimation, and bu-

reocratization. A flow chart is included. Section 5 summarizes the paper as a whole and assesses the implications of the four-phase model. References are included. (TE)

How Successful Federal and Provincial Politicians Evaluate Their School Board Experience as a Political Apprenticeship.

Pub Date—Apr 84

Note—23p.; Paper presented at the Annual Meeting of the American Educational Research Association (New Orleans, LA, April 23-27, 1984).

Pub Type—Reports - Research (143) — Speeches/-Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Board Candidates, Elementary Secondary Education, Political Attitudes, Political Influences, Political Socialization, Trustees

Identifiers—British Columbia

This study examines the value of school board experience as a political apprenticeship for a group of 10 politicians in Canada who went on to successful careers in the House of Commons or the Legislative Assembly of British Columbia. Structured indepth interviews focused on the study's principal concerns: political socialization, political recruitment, and political apprenticeship. Findings show that the majority of the respondents came from politically active families and underwent early political socialization. Six of the respondents were recruited to run for the school board by others (three by parents, friends, and neighbors; two by mayors; and one by a ratepayers' association). The other four respondents initiated their own candidacies. For nine of the respondents, election to the school board started their political careers. For all 10 of the respondents, the school board experience was an invaluable political apprenticeship, which developed such political skills as coalition building, conflict resolution, assessment of expert evidence, and financial management. The study calls for further research to examine whether the political experiences of less successful school board members differ markedly from those discussed in this study. (PB)

The Mississippi Fair Employment Practices Act: The Statute and Some Cases.

Pub Date—Aug 82

Note—9p.; Paper presented at the Annual Meeting of the National Conference of Professors of Educational Administration (San Marcos, TX, August 1982).

Pub Type—Legal/Legislative/Regulatory Materials (090) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Board of Education Policy, Compliance (Legal), Court Litigation, Due Process, Elementary Secondary Education, Equal Protection, Labor Legislation, School Personnel, State Legislation, Superintendents, Teacher Dismissal, Teacher Rights, Tenure

Identifiers—Mississippi Fair Employment Practices Act 1974, School Employment Procedures Act (Mississippi)

Statutory and case law since 1953 have created a firm basis for personnel policy in Mississippi public school districts. House Bill No. 11 (1953) prescribed methods for the selection and employment of professional staff and conditions for their suspension and dismissal, establishing rights of proper notice and due process. Standards for notification and procedures for hearings and appeal are codified in the School Employment Procedures Act of 1977, which supersedes the Mississippi Fair Employment Practices Act of 1974. Litigation pursuant to these laws (represented here by a list of 19 decisions from 1969 to 1981) has limited the powers of superintendents, curbed discriminatory employment practices, and required strict adherence to statutory due process. Although the courts have provided school employees substantial protection from arbitrary dismissal, they have left the discretionary powers of school boards largely intact. Perhaps for this reason, the Mississippi Association of Educators has proposed changes in the law; its pressure is likely to succeed in the near future. (MCG)

Identifiers—Levels of Use Scale (Hall and Louck), National Diffusion Network, Practice Profiles

The first in a 10-volume report, this volume provides an overview of the NETWORK school improvement study as a whole, placing it within the context of federal dissemination-related school improvement policies and programs. Existing research on these programs is examined and synthesized, and the evolution of the federal role in dissemination is traced. Also, Volume I outlines the objectives of the study, specifies and characterizes the sample, and describes the design and overall approach in detail. The study employs "state-of-the-art" data collection and analysis methodologies, including the development of "Practice Profiles" for each of the 61 practices studied, assessment of "Levels of Use" for each of the 315 teachers, content analysis of all interviews, use of causal models to determine factors influencing outcomes of school improvement, and development of unique qualitative approaches to analyzing field data. Sample schools (146) were selected for the study from those involved with 4 different federal school improvement strategies: interpersonal linkage of validated practice, commercial distribution, state administration of dissemination, and local development and invention. Data were collected at all levels of education—from federal program officers to teachers—and were subjected to a wide range of analyses, resulting in an indepth understanding of implementation and institutionalization processes. The volume concludes with a discussion of the pros and cons of the study's approach and design. (TE)

Descriptors—Block Grants, Educational Development, Educational Improvement, Educational Innovation, Elementary Secondary Education, Federal Aid, Federal Programs, Government School Relationship

Identifiers—Bureau of Education for the Handicapped, Elementary Secondary Education Act Title IV C, National Diffusion Network

Based on a local site sample of 146 school districts, this volume (the second in a series of 10) describes school improvement efforts supported by 4 different federal strategies and representative programs: interpersonal linkage of validated practices (National Diffusion Network), commercial distribution (Bureau of Education for the Handicapped

Market-Linkage Program), state administration of dissemination (ESEA Title IV-C Adoption Grants), and Local Development and Innovation (ESEA Title IV-C Development Grants). Characteristics of the innovative practices, the people involved, and the contexts in which they occur are discussed, along with contributions of school personnel, local and external facilitators, and other sources of assistance. The outcomes from involvement in improvement efforts are reported, ranging from extent of use of the practices, to student, teacher, and school benefits, to institutionalization. Assistance from outside the school district, most often from external facilitators funded by federal programs, was the key to preparing and supplying teachers to use the new practices and encouraging building and district support. In the third volume of this 10-volume report, 3 causal models of the school improvement process are presented and are used to identify outcomes of implementation and the factors influencing success. The first model predicts individual-level outcomes as a function of the magnitude of expected changes in instructional practice and the time spent on practice-related activities. The second model predicts school-level outcomes by projecting causal or predictive links between demographics, administrative context, practice-specific assistance, school-level outcomes, and individual-level outcomes. (Another predictive chain is posited between demographics, teaching context, and individual outcomes.) The third model predicts external facilitator assistance as a function of his or her position. External facilitators must choose (1) whether to work primarily with administrators or with teachers, (2) whether to emphasize "front end" or "back end" assistance, and (3) whether to concentrate on evaluation or continuation/extension activities. Findings obtained through the application of these models indicate factors that contribute to the success of an implementation effort. Implications for school and district personnel, external facilitators, and state and federal policymakers are discussed. (TE)

Identifiers—Elementary Secondary Education Act Title IV C, National Diffusion Network

The fourth volume of a 10-volume report, this document provides a synthesis and analysis of in-depth ethnographic case studies of 12 school districts engaged in school improvement efforts in a subsample of the study's 146 districts. All districts were implementing new practices, seven using National Diffusion Network innovations and five developing and implementing practices of their own design funded through Title IV-C Development Grants. Each stage of the implementation process is portrayed, from preadoption to institutionalization, when it occurred. The motivations, behaviors, and aspirations of school personnel involved in the improvement effort are explored; aspects of the implementation process, including factors affecting its success, are examined; and outcomes, including impact on students, are discussed. Four patterns leading to the success or failure of implementation are identified: "enforced, stabilized use," "overreaching," "blunting/downsizing," and "indifference/discouragement." (TE)

In the fifth volume of a 10-volume report, the development of federal dissemination-related school improvement policy is depicted through short case studies of nine distinctly different programs sponsored by the Department of Education: Elementary Secondary Education Act (ESEA) Title III/IV-C, the Joint Dissemination Review Panel, the National Diffusion Network, ESEA Title I, the Follow Through Program's Resource Centers, the Handicapped Children's Early Education Program Outreach Centers, the Market Linkage Project created by the Bureau of Education for the Handicapped, and ESEA Title II's Basic Skills Improvement Program. Assumptions about the transfer of information and practices and the ways in which these assumptions and the developing dissemination knowledge base influenced individual program strategies are explored. Thirty-two specific recommendations for restructuring and redirecting federal school improvement efforts are discussed. (TE)

The sixth volume of a 10-volume report, this document provides an analytic history of dissemination at the National Institute of Education, focusing on six dissemination-related programs supported by the Institute: Educational Resources Information Center (ERIC), State Dissemination Capacity Building Program, Urban Sites/Documentation and Technical Assistance Program, Teachers' Centers Exchange, Research and Development Utilization Program, and Research and Development Exchange. The emergence, implementation, and (when possible) results of the six dissemination programs are described within the social and political context affecting the Institute's development and/or support of these programs. Analyses of the different interpretations of dissemination associated with each program and their relationship to research, practice, and the federal role in education run throughout the volume, providing the author's interpretation of the descriptive material. Identifiers—Adaptive Systems Model

The seventh volume of a 10-volume report, this document discusses the findings of the study's state component, especially as the activities of the states relate to and are influenced by federal dissemination programs. An analysis of the dissemination and school improvement activities in 10 states revealed 2 distinct orientations. Some states were "maintenance" oriented, maintaining a separation between the dissemination activities of the various categorical federal programs and initiating no statewide effort or project for improvement. Other states had a

"development" orientation, coordinating federal support in such a way that local education agencies were required or encouraged to mount efforts to improve their functioning and/or their instructional processes. The volume analyzes the antecedents, characteristics, and accomplishments of both kinds of orientations and draws implications for federal and state policy. (TE)

Identifiers—National Diffusion Network

The eighth volume of a 10-volume report, this document focuses exclusively on the National Diffusion Network, examining how the program functions as a service delivery system. The central organizational aspects and practices of the National Diffusion Network are explored within the context of its transformation from a set of independent contractors serving federal policy goals to an enterprising grassroots organization far less dependent on federal leaders for direction and control. Findings from a survey mailed to all funded full-time participants in the National Diffusion Network—including developer/demonstrators, state facilitators, technical assistance contractors, and federal employees—are presented and analyzed. These provide the basis for a concluding discussion of implications for implementation policy. (TE)

The ninth volume of this 10-volume report summarizes and synthesizes the outcome of the study, describing the design, sample, analysis procedures, and findings from the examination of federal and state dissemination strategies and from the survey and field studies of local sites. The examinations of the federal and state components result in one major recommendation: to establish a single federal office for facilitating productive exchange between the ar-

ray of efforts using dissemination for school improvement. The examinations of local site components, both survey and field studies, reveal that the local adoption of new practices is influenced by the motives and attitudes of teachers and administrators, the assistance activities of central office and external facilitators, and the match-up between current practice and innovation. Antecedents, characteristics, and outcomes of practice implementation are discussed, and 10 major conclusions are derived for policymakers at all levels. These bear on the lack of coordination between federal dissemination strategies, the interface between federal and state programs, and the ingredients of successful adoption and implementation at the local level. The tenth and final volume of this study provides a short, crisp summary of its findings for educators at all levels. Important considerations are suggested for federal and state policymakers as they support schools in their change efforts, and for school people who are committed to making effective and long-lasting improvements in their classrooms. These conclude with "a path to success," consisting of six major practical insights derived from the study as a whole. An annotated bibliography describes the 10 volumes of the study's master report, supporting documents from which the volumes were written, and additional publications that describe various study methodologies and findings for particular audiences. Descriptors—*Court Litigation, *Dismissal (Personnel), *Due Process, Elementary Secondary Education, Employer Employee Relationship, School Districts, *State Legislation, State Standards, Superintendents, *Teacher Employment, Tenure

Identifiers—*Mississippi, *School Employment Procedures Act (Mississippi)

Although Mississippi has no statutes for granting tenure to public school employees, state laws passed in 1953, 1974, and 1977 do provide for due process in case of teacher suspension or dismissal. To determine to what extent the state's 153 public school districts were implementing employee due process under the 1977 "School Employment Procedures Act" (SEPA), a survey was conducted of all school district superintendents. Of the 77 respondents, about two-thirds are committed to some kind of written board policy pertaining to SEPA's provisions for employee due process. In the numerous court cases involving the SEPA, thus far, the courts

have ruled that school boards and administrators must adhere rigidly to statutory due process. However, decisions in such cases have tended to support board decisions when due process was followed and reasonable grounds were given for dismissal. Although SEPA has already given public school employees needed protection without diminishing the discretionary dismissal powers of Mississippi school boards, further changes in the law are likely. Things a Board Ought Never Bargain.

Pub Date—23 Apr 83

Note—14p; Paper presented at the Annual Meeting of the National School Boards Association (San Francisco, CA, April 23-26, 1983).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Accountability, *Board of Education Policy, *Boards of Education, *Collective Bargaining, *Contracts, Educational Administration, Employer Employee Relationship, Labor Demands, *Negotiation Agreements, Public School Teachers, *Teacher Associations

This paper argues that school boards give away too much in contract negotiations with teacher associations without making sure the concessions they make result in higher educational quality. Educational administrators' general lack of expertise in labor relations, the author maintains, tends to lead to low quality contracts. Reviewing 11 articles devoted to bargaining and contracts in the "American School Board Journal" from 1970 to 1982, the study offers conclusions from each as to what school boards should not negotiate. It contends further that because of teachers' current concerns about job security, school boards are now in a position to make fewer concessions than they have in the past. The 11 articles reviewed concur in advising boards to address with caution negotiations that involve (1) board management rights, (2) ambiguous language, (3) specific money items separated from total costs, (4) calls for the board to serve as grievance tribunal, and (5) possible constraints of the board's normal procedures. The study concludes with two appendices outlining selected generalizations about professional employees and the DON'Ts of bargaining in light of the articles reviewed. (JBM)

Descriptors—Civil Rights, Civil Rights Legislation, Compliance (Legal), *Differentiated Staffs, Elementary Secondary Education, Employment Practices, Incentives, *Legal Problems, Master Teachers, *Merit Pay, Merit Rating, Rewards, *Salaries, *Social Discrimination, *Teacher Employment, Teacher Morale

Although employment decisions must be in harmony with existing case laws and statutes, such decisions allow for more flexibility than is sometimes supposed. Increasingly, state legislators and other public officials (including Secretary of Education T. H. Bell and Tennessee Governor Lamar Alexander) are working to establish differentiated pay scales that would reward teachers for high performance. Although the single salary pay scale has the advantage of not being race or sex biased, it offers equal rewards for work of varying degrees of quality. To provide incentives that will attract good teachers and keep them in the profession, many school administrators are now approaching the question of teacher salaries more aggressively. A recent South Carolina court case affirms efforts to improve instructional programs through variations in salary based on testable teaching related competencies. Because of United States civil rights legislation (1866, 1871, and 1964), school district attempts to establish variable pay plans must be able to refute any accusation of discrimination. Three recent court cases in Colorado, Oregon, and North Dakota

Summer Correspondence Program.

Sulphur Springs Union Elementary School District, Canyon Country, CA.

Pub Date—84

Note—3p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Basic Skills, *Correspondence Study, Demonstration Programs, Elementary Education, *Elementary School Mathematics, Expenditure Per Student, Home Study, *Language Arts, Learning Activities, *Parent Participation, Program Descriptions, Program Effectiveness, *Reading Instruction, School Community Relationship, *Summer Programs

Identifiers—PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: The goals of the Summer Correspondence Program have been to help students

maintain their basic skills and avoid summer fall-out, as well as to promote parent involvement and positive community relations. After Proposition 13 left no funds for continuation of summer school programs, Sulphur Springs District implemented a Summer Correspondence Program for students. In a financially tight era for public education, the district expends approximately \$4 per pupil for this effective program. In 1984, the district will again offer this innovative program. Mrs. Sara Sherlock was asked to develop such a program which served 370 students in 1981, 437 students in 1982, and 400 in 1983. (This was approximately 25% of the district student population over this period of time.) Each classroom teacher evaluated the math and reading level of the participating students and determined what level of math skills should be reviewed and what level of decoding, comprehension, and language skills should be reinforced over the summer. Then each teacher sent a list of students, their individual skill levels, and their envelopes to Mrs. Sherlock. Mrs. Sherlock organized a sequence of skill reinforcements at the variety of levels needed. Each of the ten weeks, students received math, reading and language review at their levels and one other "special" item. The specials included such items as calendars of suggested daily activities, back-to-school safety tips, an evaluation form for the program, and creative writing motivators. The parents were asked to correct the math, language and reading papers and to record their child's progress on a form sent to them the first week of the program. In 1983 almost 100 parents completed and returned the form verifying their children had completed all of the summer reading, math, and language assignments. To measure whether the goals of the Summer Correspondence Program were being met or not, end-of-summer evaluations were sent to parents of the students involved. Additionally, tests were given to a random sampling of participating students and nonparticipating students during the first week of school after the 1982 program which indicated program success. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of highlighting for the California educational community. Identifiers—PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: The Little Lake City School District was considering the closing of schools because of declining enrollment. A study indicated Lakeland School would be one of those recommended for closure, one of the reasons being the cost to bring the school "up to standard" by needed painting. A parent group indicated to the Board of Education that if the school were to remain open, parents would paint the school. The school was not closed and parents honored the commitment to paint. Finances for paint and necessary equipment to do the job were raised through various fund-raising activities, including a kick-off pancake breakfast. Volunteer parents, teachers, and the principal have worked numerous Saturdays in scraping, sanding, priming, and applying paint to the outside of the buildings. Mothers as well as fathers have been on rooftops, scaffolding, and the tops of ladders. Windows previously painted have been scraped to give the school a consistency in appearance. The project continued during the heat of the summer and fall months. Child care was provided for children to allow the parents to paint. Grandparents of children previously attending the school volunteered time. A great pride in accomplishment has been achieved. This document was selected by the Association of California School Administrators (ACSA) Task Force on Public Confidence as descriptive of a promising practice or exemplary project worthy of

highlighting for the California educational community. (Author)

Descriptors—Analysis of Variance, Elementary Secondary Education, Foreign Countries, *Hypothesis Testing, Job Analysis, *Job Performance, *Leadership Styles, Leadership Training, Open Education, *Organizational Climate, Organizational Theories, Power Structure, *Principals, Traditional Schools

Identifiers—*Fiedler Contingency Model of Leader Effectiveness, Ontario

Based on Fiedler's Contingency Model of Leadership Effectiveness and Leader-Match program, this study's hypothesis is that experienced school principals increase their effectiveness by changing key organizational variables to suit their personal leadership styles. Following V. D. McNamara's application of Fiedler's contingency model in a study of elementary school principals, Fiedler has suggested that organizational leaders can maximize their effectiveness by manipulating leader-member relations (the extent to which leaders feel liked and accepted by the group), task structure (the degree to which leaders can define and control tasks), and position power (the leader's formally delegated power as distinguished from the ability to inspire loyalty). To test four hypotheses examining the congruence between leadership style and school organizational structure in light of the differences between "open" and "traditional" schools, Faulkner's Description of School questionnaire was distributed to 400 randomly selected schools in 25 Ontario school districts. A one-way analysis of variance computation for the 156 schools finally used in the study supports three of the four hypotheses and confirms the explanatory power of Fiedler's contingency model. Results also indicate, however, that further study is needed of outside social forces as important contingencies for leader effectiveness. (JBM)

Identifiers—Coleman Report, *Effective Schools Research

This review summarizes and analyzes the body of research on the characteristics of effective schools in addition to early input-output research, which implied that the determinants of student achievement lay chiefly outside the control of the schools. Chapter 1 discusses patterns in the results of input-output studies, including research investigating the relationship between specific school resources and student performance. Chapter 2 answers the question "Do Schools Matter?" with a presentation of research demonstrating that what occurs in the school significantly affects student achievement. Chapter 3 provides the findings of effective schools research, describing in detail the characteristics of effective schools. Listed in chapter 4 are major criticisms of effective schools research, chapter 5 summarizes the key points of the preceding chapters, and a substantial appendix offers synopses of the studies reviewed. Texas Public Schools: A Sampling of Excellence.

Texas Education Agency, Austin.

Pub Date—83

Note—47p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Academic Achievement, Bilingual Education Programs, Change Strategies, Community Involvement, Computer Assisted Instruction, Economics Education, Educational Assessment, Educational Improvement, Elementary School Curriculum, Elementary Secondary Education, Gifted, History Instruction, Learning Resources Centers, Magnet Schools, Microcomputers, Mobile Educational Services, Planetariums, Public Schools, Racial Integration, Reading Instruction, Secondary School Curriculum, Second Language Instruction, Special Education, Student Promotion, Study Skills

Aimed at acquainting taxpayers with Texas public schools, this collection presents 14 illustrated articles describing examples of strong elementary and secondary school programs in districts across the state. The first three articles report on Wichita Falls' successful elementary reading instruction program; Houston's magnet schools, which offer specialized academic programs and promote desegregation; and Plains' learning resources center, which addresses a broad range of student and community interests. Next, an itinerant special education van servicing the Panhandle, a free enterprise economics course in Pine Tree High School, and rapidly growing Fort Bend's change management program are discussed. The articles following cover microcomputer education in Klein, El Paso's district planetarium, and stiffened promotion and graduation requirements in Dallas. Gifted and talented education in McAllen, an international baccalaureate program in Houston, and Cypress-Fairbank's freshman study skills program are also described. The final two reports are devoted to the restoration projects of Jefferson's Junior Historians and computer-assisted bilingual education in Mission. (MJL)

Feeney, J. D.

A Simulation Model for the Selection of Special Need Schools. Research Report.

Metropolitan Separate School Board, Toronto (Ontario). Research Dept.

Pub Date—Sep 82

Note—32p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Academic Achievement, Disadvantaged Environment, Disadvantaged Schools, Educational Equity (Finance), Educationally Disadvantaged, Educational Needs, Educational Opportunities, Elementary Secondary Education, Equal Education, Equalization Aid, Foreign Countries, Individual Needs, Models, Resource Allocation, Simulated Environment, Simulation, Student Needs

Identifiers—Special Needs Students, Toronto Metropolitan Separate School Board ON

Since 1969, Toronto's Metropolitan Separate School Board has been rewarding additional monies to "Special Needs" schools within its jurisdiction in the hope of raising educational opportunity in those schools to a more equitable level. The attempt to arrive at a fair system for determining which schools should receive such assistance led in 1974 to a "special need" scale consisting of five basic measures (including mathematics scores, school size, and the number of students from one-parent homes). Although this scale was used for several years, school-based committee members soon demanded that the unit of measure be changed from the school to the individual students. In 1980, the school mean score previously used for the calculation of special need schools was replaced by an individual mean score based on indexes of social context, school context, and student achievement. Schools selected according to these factors for the "Special Needs List" are subsequently arranged into three categories reflecting greater and lesser degrees of need. To help resolve the perennial problem of special need schools selection, a simulation model is needed that would provide a view of various futures within these schools by integrating a Score Generation Model with a Resources Appropriations Model. Parents and School Choice: A Household Survey.

School Finance Project Working Paper.

Office of Educational Research and Improvement

(ED), Washington, DC.

Pub Date—Dec 83

Note—109p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC05 Plus Postage.

Descriptors—Elementary Secondary Education, Government School Relationship, Minority Groups, National Surveys, Private Education, Private School Aid, Private Schools, Public Schools, School Choice, Self Determination, Socioeconomic Status, Tax Credits, Tuition

To investigate how parents currently choose their children's schools and how a federal tuition tax credit might affect their decisions, the School Finance Project conducted a national telephone interview survey of 1,223 households with children in grades K-11 in June and July 1982. Of the families interviewed, about 88 percent had children in public schools; about 12 percent had children in private schools. Following a discussion in chapter 1 of the study's methodology and survey sample characteristics (region, income, race, parental education, residence, and religion), chapter 2 presents the study's findings concerning parental choice of schooling. Chapter 3 examines parental inclinations to transfer children to a different school under a tax credit. The fourth and last chapter discusses the implications of parental preferences and the likelihood that parents would or could actually transfer their children to private schools under a tax credit. Survey findings indicate that a tuition tax credit could result in significantly higher private school enrollments in grades 1-12 with more students from minorities and less from affluent backgrounds, though private schools may be unable to absorb large enrollment increases in the short run. The study includes seven appendixes and numerous tables and figures. (BM)

Descriptors—Educational Assessment, Educational Environment, Educational Objectives, Educational Planning, Educational Principles, Elementary Secondary Education, Relevance (Education), School Role

This document proposes a statement of purpose for public education and provides a rationale to support and possibly to improve the statement. The statement reads: "The purpose of elementary and secondary public education in this country is to enable all students to be and to become productive contributors toward making planet earth a good and permanent living place for human beings." Beginning with the infinitive, "to enable," the author defines each word or concept of the statement. The author also emphasizes that the key contribution of such a statement would be to tie together the learner, the teacher, and the content in a purposeful pursuit. Moreover, the statement would encourage greater public support of public schools and would provide a valid basis for planning and evaluation. (PB)

Descriptors—Educational Assessment, Educational Equity (Finance), Educational Objectives, Educational Principles, Educational Quality, Elementary Secondary Education, Equal Education, Equal Facilities, Nondiscriminatory Education, School Desegregation

Identifiers—Milwaukee Public Schools WI

This document examines the issues of educational excellence and equity. The Milwaukee Public School System, Wisconsin, is cited as an example of a desegregation program that both exceeded court requirements of equity and also made a substantial contribution to the goals of excellence in education. The school effectiveness movement, like desegregation, has also made contributions to both equity and excellence goals in education. The document suggests that educators need to reach a point where the correlation between social class and membership in either adequate or excellent educational groups is zero. The document includes seven recommendations: (1) rivalries among educational subgroups must cease; (2) a study of major national, state, and local reports on education is needed; (3) school districts must concentrate their energies and resources at the high school level; (4) excellence strategies must be examined against an equity standard; (5) schools must guarantee adequacy for all and equal access to excellence; (6) educators must commit themselves to the expansion of alternatives in education and to the universal application of school effectiveness strategies; and (7) leaders at all levels must promote both the equity and the excellence agendas. Declining Revenues and Personnel Allocation in School Districts.

Pub Date—Apr 83

Note—22p.; Paper presented at the Annual Meeting of the American Educational Research Association (Montreal, Quebec, Canada, April 11-15, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Administrators, Boards of Education, Declining Enrollment, Educational Finance, Elementary Secondary Education, Federal Aid, Reduction in Force, Retrenchment, Services, Teacher Dismissal

Identifiers—British Columbia, Missouri

This study was conducted to see how schools allocate resources during periods of declining revenue. It assumed that the places where staff reductions are made may indicate where districts feel they have "extra" resources. The study was conducted between 1969 and 1983 in Missouri and also includes supporting data from British Columbia. The study examined six hypotheses. It found that reductions in budgets do cause the reallocation process to begin. This includes teacher layoffs first and administrative support personnel layoffs next. Large reductions in budgets alter administrative growth components. Withdrawal of federal support appears to lead to reductions in administrative staffing. The authors point to two interpretations: first, that there are areas of school budgets considered "frills"; and second, that educators have not documented the benefits from increased use of support personnel, and that, as fiscal pressures rise, school boards choose to reduce these areas. Descriptors—Beginning Teachers, Cooperative Programs, Educational Administration, Elementary Secondary Education, Formative Evaluation, Higher Education, Internship Programs, Preservice Teacher Education, Program Improvement, Schools of Education, Student Teaching, Teacher Certification, Teacher Education Programs, Teacher Educators, Teacher Orientation

Identifiers—Austin College TX, Oregon, University of Kansas, University of New Hampshire

Intended to provide background information for task force use, this set of working papers concludes with recommendations for revising the University of Oregon College of Education teacher preparation programs. Section I summarizes the concerns of Oregon educators, reports recommendations made by an ad hoc state committee and the chancellor, and assesses the college's status in relation to those recommendations. Section II on induction programs—reviews statements advocating that extended

teacher education include induction, analyzes 5-year preparation programs in other states, and discusses state-mandated programs for first-year teachers, noting common elements, problems, and benefits. In section III the effects of state-entry induction programs, campus-based extended programs, and existing University of Oregon programs are assessed. A proposed campus-based extended program is outlined that would place two licensed interns in a classroom, each to be paid a regulated percentage of a beginning teacher's salary. Appendixes include joint committee and chancellor's recommendations, recurrent themes in the Oregon education dialog, models of 5-year campus-based preservice programs, a description of Georgia's performance-based certification system, and proposals entitled "Improving the Quality of Teacher education in Oregon." Descriptors—Accreditation (Institutions), *Awards, *Competition, Educational Administration, *Educational Quality, Elementary Secondary Education, *Incentives, *Professional Recognition, Rewards, School Effectiveness

Identifiers—*Excellence, For Character Program (Chicago), Ford Foundation, Secretary of Education Recognition Program

This paper outlines three school award programs: the Ford program, the Secretary of Education's Program, and the For Character Program (Chicago). In providing descriptions of each program, the similarities and differences are analyzed. The programs share three basic assumptions: (1) that some schools are better managed than others and that elements of good management can be identified, (2) that administrators will respond to competition, and finally, (3) that enough is known about school effectiveness to justify an award process. The author reflects that the programs are noncompulsory, making them more adaptable and experimental. He also points out that such programs should not be carried out too casually or they will lose their legitimacy. Finally, he feels the award structures should identify a number of "winners" and provide incentives to reward all participants. (MD)

Identifiers—Education Consolidation and Improvement Act 1981

This 13th annual report to Congress provides program-by-program summaries of evaluative information on federally funded education programs for fiscal year 1983. The format for each program description has been revised to make it responsive to the reporting requirements of the General Education Provisions Act (GEPA). Accordingly, each entry is divided into three major sections: (1) program profile, covering legislation, recent funding history, purpose, eligibility, and other information on requirements; (2) response to GEPA 417(a), containing major sections of information specified in the mandate, such as program goals, progress and accomplishments, cost effectiveness, plans for improvement and legislative recommendations, supporting studies, and data on participants; (3) response to GEPA 417(b), containing summary information on evaluation contracts. An introductory section is provided which highlights analyses of the

Educational Consolidation and Improvement Act of 1980. Thereafter, program descriptions are grouped under the following Department of Education jurisdictional headings: (1) Office of Elementary and Secondary Education, (2) Office of Bilingual Education and Minority Languages Affairs, (3) Office of Special Education and Rehabilitative Services, (4) Office of Vocational and Adult Education, (5) Office of Postsecondary Education, and (6) Office of Educational Research and Improvement. An index is provided, along with an appendix listing active planning and evaluation contracts during fiscal year 1983. (TE)

Identifiers—Department of Education, *National Commission on Excellence in Education, Nation at Risk (A)

This volume documents the response to the final report of the National Commission on Excellence in Education, "A Nation at Risk," at national, state, and local levels during calendar 1983. It is divided into three parts. The first part, "The Nation Responds: An Overview," describes national developments in education during this period and summarizes state and local efforts to improve education. National developments include an outpouring of public support for educational reform, reflected and reinforced by the press and broadcast media, and an enthusiastic response from the education profession and the business community indicating a willingness to sponsor educational improvement. The second part, "State Initiatives," consists of an alphabetical list of state "profiles," providing information on each state's ongoing efforts at educational reform. The third part, "Sample Activities," consists of brief accounts of reform efforts in selected local school districts, postsecondary institutions, associations, and private sector organizations. Among local school districts, samples are included of efforts to improve the content of schooling, the time allotted for instruction, teaching, and administrative leadership. Postsecondary institutions are listed that are attempting to strengthen working relationships with schools or improve teacher education. Each listing of local school districts, postsecondary institutions, foundations, business-school partnership programs, and other types of organizations concludes with the name and phone number of a specific contact person. Oklahoma Special Education-Vocational Rehabilitation Cooperative Work-Study Program.

Pub Date—Aug 82

Note—10p; Paper presented at the Conference on Work Experience Programs for Handicapped Children (August 23-25, 1982).

Pub Type—Reports - Descriptive (141) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Cooperative Programs, *Disabilities, High Schools, Program Evaluation, *Vocational Education, *Work Study Programs

Identifiers—*Oklahoma

Oklahoma's work study program for handicapped high school students, a cooperative effort between public schools and the State Departments of Education and Human Services, is described. Responsibility

ities of each party are discussed, and basic training elements (adjustment training, career awareness, and employer-employee relations) are noted. Results of annual evaluations are cited, including the program's strengths (such as cooperation among personnel and increased availability of training sites). The added component of a summer program is described as an approach to ease the transition from one school year to the next. In addition, the cooperation among vocational rehabilitation, vocational technical education, and special education has resulted in such further programs as a network of vocational evaluation centers and shared funding arrangements for interpreters for the deaf at two state postsecondary schools. Informal followup data are cited to demonstrate program effectiveness. (CL)

Brown, Lou And Others

The Critical Need for Nonschool Instruction in Educational Programs for Severely Handicapped Students. Draft.

Wisconsin Univ., Madison.

Spons Agency—Office of Special Education and Rehabilitative Services (ED), Washington, DC. Div. of Personnel Preparation.

Pub Date—25 Aug 82

Grant—G008102099

Note—17p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Educational Environment, *Educational Methods, Elementary Secondary Education, *Experiential Learning, *Normalization (Handicapped), Postsecondary Education, *Severe Disabilities

The authors stress the importance of providing severely handicapped students with concurrent, systematic, direct, and individualized instruction both in school and nonschool environments within daily or weekly time intervals. A brief historical review of educational service delivery models for the severely handicapped is provided. These include: (1) no schools; (2) segregated private schools; (3) segregated public schools; (4) regular, but chronological age inappropriate, schools; (5) chronological age appropriate regular schools in accordance with the natural proportion; and (6) chronological age appropriate regular schools in accordance with the natural proportion and instruction in nonschool environments. Discussed are the educational implications of such learning and performance characteristics of the severely handicapped as the number of skills that can be acquired, the number of instructional trials needed to acquire skills at meaningful performance criteria, instructional inference (transfer of training), skill complexity, retention-recoupment, synthesis skills, and generative skills. The authors compare four instructional location strategies (school instruction only, consecutive instruction in first the school and then the nonschool environments, concurrent instruction in both environments, and nonschool instruction only in appropriate natural environments). For students under the age of 18 concurrent instruction is recommended, though older students should receive most or all of their instruction in the nonschool environments in which the student is expected to function. Project SISS: Social Skills Program. Draft

Iowa State Dept. of Public Instruction, Des Moines. Div. of Special Education.

Pub Date—Mar 83

Note—392p.; The document was sponsored by Smouse Opportunity School, Des Moines Independent School District.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC16 Plus Postage.

Descriptors—Curriculum Guides, Elementary Secondary Education, *Interpersonal Competence, *Interpersonal Relationship, Lesson Plans, *Mild Mental Retardation, *Social Development

Identifiers—*Project SISS

The curriculum, developed by Project SISS (Systematic Instruction of Social Skills) in Des Moines, Iowa, contains about 100 lessons for use with mildly mentally handicapped children at primary, intermediate, junior high, and senior high levels. The social skill lessons were developed along an age related, expanding milieu concept and include the following broad areas: getting along with teachers and school officials; getting along with peers; getting along in

the community; and getting along on the job. Lessons are based on a direct instruction model involving a six step procedure: (1) establishing the need, (2) identifying skill components, (3) modeling the skill, (4) role playing the skill, (5) practicing the skill, and (6) generalizing and transferring the skill to other settings. Instructions are given for assessing student needs and for carrying out the lessons. Suggestions are also given for followup and performance deficits including use of a token economy, behavioral contracts, peer instruction, cognitive behavior modification, and home contingencies. Suggestions are also given for creating more lessons. Sample lessons include the following: attending to teacher during instruction (primary), taking turns in games and activities (primary), completing work on time (intermediate), asking peers for help (intermediate), dealing with embarrassment (junior high), initiating conversations (junior high), using free time productively (senior high), and negotiating on the job (senior high). Appended are the Social Skills Rating Checklist and camera ready homework forms. (DB)

Cognitive Complexity and Gifted Education: A Study of 5th, 6th & 7th Graders.

Pub Date—Nov 83

Note—15p.; Paper presented at the Convention of the Speech Communication Association (Washington, DC, November 10-13, 1983). Document may not reproduce well.

Pub Type—Reports - Research (143)—Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Child Development, *Cognitive Development, Communication Skills, Creativity, *Gifted, Intermediate Grades, Talent Identification

Identifiers—*Cognitive Complexity

Interrelationships of intellectual ability, task commitment, and creativity were examined for gifted fifth through seventh graders. Ss were administered the Crockett Role Category Inventory, the Iowa Tests of Basic Skills and the Torrance Tests of Creative Thinking. As expected, no significant correlations among test results were noted. However, when grade and gifted category were used as factors, the developmental trend expected—cognitive complexity increasing with grade level—was not found, nor did the category of giftedness differentiate cognitive complexity scores. Creative Ss chosen by teachers performed well on the creativity test. Results did not support the use of cognitive complexity as a measure of intellectual sophistication. (CL)

Descriptors—*Behavior Modification, *Behavior Problems, *Civil Rights, Elementary Secondary Education, *Ethics, *Legal Problems, *Severe Disabilities

One way of monitoring the effects of ethical and legal issues concerning severely handicapped students is establishing an additional level of review in the public schools. The Human Rights Committee (HRC) in one district, composed of multidisciplinary professional and community staff, has reviewed 56 individual behavior management programs considered too restrictive for approval by staff conference alone. The increase in number of behavior programs involving restraints and aversives after the HRC's establishment may be explained by the admission of more severely behavior disordered students in the public school setting and the provision for more in-depth discussion of treatments before they were instituted. Descriptors—*College Libraries, College Students, *Hearing Impairments, Higher Education, Library Equipment, *Library Services, Needs Assessment, *Physical Disabilities, *Visual Impairments

Semi-structured interviews were conducted with 53 university students with visual, hearing, and motor impairments to determine their use and perception of campus library services. Ss, who majored in a wide range of disciplines, rated their use of library services. Most frequent use was reported by students with motor impairments, while 21% of visually impaired Ss indicated no use. Accessibility problems were noted, including parking, limited wheelchair room, and inadequacy of signs. Ss expressed some dissatisfaction with staff attitudes and assistance. The need for library use instruction that would include special orientation and teaching was cited. Difficulties reported with materials and equipment were associated primarily with visual impairment. Seven recommendations were formulated including special photocopy services for visually and motor impaired students and increased inservice training for staff. (CL)

Descriptors—College Students, *Hearing Impairments, Higher Education, *Library Services, *Li-

library Skills, Needs Assessment, *Physical Disabilities, *Program Development, *Visual Impairments

The paper reviews approaches for making bibliographic instruction accessible to college students with visual, hearing, and mobility impairments. Needs assessment should focus on students, library staff, administrative officers, faculty members, and educational specialists. Consideration in program development should be given not only to special programs but also to modifying existing programs. Suggestions for library orientation approaches are offered for blind, hearing impaired, and physically disabled students. Examples of successful bibliographic instruction employing video formats and emphasis on term paper counseling are cited. The importance of evaluating the programs and using results to improve instruction is stressed. (CL)

Descriptors—*College Students, Higher Education, Magnetic Tape Cassettes, Material Development, Sensory Aids, *Visual Impairments

Identifiers—*Voice Indexing

Twenty-seven blind college students were interviewed on notetaking and studying techniques and were asked to participate in a study of voice indexing, which facilitates access to segments of audio tape. A programed text in recorded form on voice indexing was then pretested by 12 blind participants and revised, based upon findings. The text presents introductory material on uses of voice indexes, mechanics of tape handling, and the intellectual task of selecting tape segments and indexing terms. The programed text was then sent, in printed and recorded form, to approximately 400 offices of disabled student services at U.S. community colleges, colleges and universities and to state agencies serving the disabled. Wilson, Betty Ruth
Library Accessibility.

Pub Date—May 83

Note—16p.; Paper presented at the Conference on Academic Library Services to Disabled Students (Tallahassee, Florida, May 6-7, 1983).

Pub Type—Speeches/Meeting Papers (150) — Guides — Non-Classroom (055)

EDRS Price — MF01/PC01 Plus Postage.

Descriptors—Academic Libraries, *Accessibility (for Disabled), *College Libraries, College Students, *Disabilities, Library Services

The paper addresses issues in libraries' architectural accessibility for disabled students. A history of awareness regarding accessibility is recounted and the increased acknowledgement of need for services for disabled persons is underlined. The author points out steps that may be undertaken to provide accessibility in ways other than major structural efforts, such as understanding subtle barriers and altering them. The installation of accessible telephones is cited as one example. (CL)

Needham, William L.
Academic Library Services to Disabled Students Conference, May 6-7, 1983. Conference Summary.

Pub Date—May 83

Note—8p.; Paper presented at the Conference on Academic Library Services to Disabled Students (Tallahassee, FL, May 6-7, 1983).

Pub Type—Information Analyses (070) — Speeches/Meeting Papers (150)

EDRS Price — MF01/PC01 Plus Postage.

Descriptors—Academic Libraries, College Students, Conference Papers, *Disabilities, Library Equipment, *Library Services, Staff Development

A conference on academic library services to disabled students is summarized. Presentations which focused on the global context of library services and the information role of library personnel, the need to develop qualitative and quantitative standards dealing with technical as well as service aspects, the growing body of information resources on library

services for disabled students, the importance of bibliographic instruction for disabled students, the need for user involvement, the importance of taped materials, and the advent of new equipment are noted. It is suggested that campus experiences underline the need for awareness, student input, staff training, and cooperation among departments and faculty members. (CL)

The Leisure Diagnostic Battery Project: Executive Summary. Development and Validation of a Standardized Leisure Diagnostic Battery (LDB) to Assess Leisure Functioning of Handicapped Children and Youth. July 1, 1979-August 31, 1982.

North Texas State Univ., Denton. Div. of Recreation and Leisure Studies.

Spons Agency—Special Education Programs (ED-OSERS), Washington, DC.

Pub Date—Aug 82

Grant—G007902257

Note—38p.

Pub Type—Reports — Evaluative (142)

EDRS Price — MF01/PC02 Plus Postage.

Descriptors—Elementary Secondary Education, *Evaluation Methods, *Leisure Time, *Mild Mental Retardation, Recreational Activities, *Test Construction, Test Reliability, Test Validity

The report describes goals and accomplishments of a project to develop and validate an assessment battery of leisure functioning in handicapped children. The battery was intended to meet the need created by the Education for All Handicapped Children Act and provide data for the assessment of recreation and leisure functioning as part of the student's overall individualized education program. Two versions of the leisure diagnostic battery (LDB) were developed: one for disabled students (9-15 years old) with normal cognitive development and one for 9-15 year olds with educable mental retardation. Project objectives and tasks for the 3 years are detailed, and a summary charts the project's evolution by year. The LDB's conceptualization and development are discussed in terms of its basis in perceived freedom and leisure (with implications for perceived control, competence, and intrinsic motivation); its process of assessment through remediation; and the components, purposes, and domains of the LDB scales. Field test data for reliability and validity of both versions are reported. (CL)

The report presents findings of a 3-year investigation of a language intervention program for young children (3-6 years old) with serious language disabilities. The model features a communication game approach to teach linguistic elements through stress on meaningful conversation. An initial chapter describes project aims and accomplishments and discusses its theoretical underpinnings. Chapter 2 describes the intervention program in greater detail, with consideration of the rationale and procedures involved in the communication game approach, the model's three levels of increasing complexity, and examples of game formats used. An evaluation chapter first addresses methodological options and then describes sample selection procedures for the field testing. Following a review of data collection procedures, chapter 5 presents results in terms of background variables and analysis of spontaneous speech samples. Case studies illustrate the communication game approach. Concluding chapters address practitioner training needs, provide

observations and suggestions regarding program implementation, and summarize conclusions and recommendations. Appended materials includes forms and a parents' guide to communication games. (CL)

Note—249p.; Parts are marginally legible. For Volume I, see EC 161 825.

Pub Type—Guides — Classroom — Teacher (052) — Reports — Descriptive (141)

EDRS Price — MF01/PC10 Plus Postage.

Descriptors—*Communication Skills, Curriculum Guides, *Delayed Speech, *Games, *Language Acquisition, *Language Handicaps, Teaching Methods

The guide describes communication games—simple, noncompetitive structured activities designed to promote conversational and linguistic skills in children with language delays and linguistic disabilities. The approach is distinguished from traditional approaches by the creation of a genuine need for talking rather than arbitrary demands, emphasis on meaning rather than imitation, and reinforcement of responses related to meaning. Three levels of one-word utterances, two-word constructions, and multiword constructions and modulations are incorporated into the games, which may be played individually or in small groups with various combinations of adults and children. The process of matching games to a child is focused on. Six types of communicative games are described and examples given: hiding games, lotto and bingo, picture-look matching, identical arrangements, action directive games, and guessing games. A final chapter addresses the change from a traditional to a communicative teaching approach. Appendices describe the linguistic content and the design and construction of the games. (CL)

Descriptors—Age Differences, Blindness, Cerebral Palsy, Curriculum Development, Deafness, Elementary Secondary Education, Evaluation Methods, *Hearing Impairments, *Motor Development, Muscular Strength, *Physical Disabilities, *Physical Fitness, *Physical Health, Sex Differences, *Visual Impairments

The report summarizes findings from an examination of the physical fitness of orthopedically and sensory impaired students (10-17 years old). Physical fitness was hypothesized to include six areas: body composition, muscular strength/endurance, speed, agility, flexibility, and cardiorespiratory endurance. A chapter on methods details subject selection procedures (including information of definitions, categories, and codes) and tests for each of the six areas. Ss' scores are presented for each test item, at each age, for males and females, and for sexes combined. The effects of groups/conditions, age, and sex on physical fitness test performance are analyzed, as are the effects of severity and onset of handicapping condition and methods of ambulation. Also presented is descriptive information contrasting performance of nonhandicapped and handicapped Ss. Factor structures of fitness for specific groups are provided. Curricular implications of the study's results pertain to the commonality of factor structure, levels of physical fitness, type and severity of handicapping condition, age, sex differences, educational setting, individualization, education responsibility, and training materials. (CL)

Descriptors—*Behavior Modification, *Behavior Problems, Decision Making, *Intervention, *Models, Preschool Education, *Severe Disabilities

The report summarizes findings from an investigation of response interrelationships in severely handicapped children with behavior problems in order to provide empirical guidelines for determining intervention priorities. A state-wide sample of severely handicapped, behavior problem children (2-8 years old) was observed longitudinally in their public school program. Real-time observational techniques using microprocessors recorded percent duration of over 95 inappropriate behaviors as well as teacher and environmental variables. Excess behaviors showed small decreases over 3 years, as contrasted with previous epidemiological findings for institutionalized children. For a subsample of the Ss individual interventions were undertaken to determine whether response patterns could be identified. Although reliable clusters proved difficult to identify, both the child studies and investigations of teachers' decision making suggested that programming based on the acquisition of functional skills was the most valuable strategy for reducing excess behaviors. A model was developed to help teachers and other clinicians choose interventions. (Author/CL)

Descriptors—*Disabilities, Interaction, *Interpersonal Competence, *Mainstreaming, *Peer Relationship, Preschool Education, Sex Differences, Social Development

The investigation of developmental integration among preschool children included a descriptive study of social proximity and social integration in a university-based model program, a replication of the methods and analyses in seven community sites, and a comparative analysis of the findings. Observations of geographic proximity and social interaction were completed for 44 children in the university program and 165 children in community sites. Although no significant results were found for teacher association and child characteristics, significant differences between the programs were revealed. Among other results were that social isolation was rare, but when it did occur it was correlated by dysfunctional development and male sex; handicapped Ss were half as active as their nonhandicapped peers; and adult-child contact was more pervasive for handicapped Ss in all settings. The findings were interpreted to indicate that social proximity is not sufficient to assure developmental integration. (Author/CL)

Note—270p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC11 Plus Postage.

Descriptors—*Decision Making, Elementary Secondary Education, *Learning Processes, *Severe Disabilities, *Teacher Behavior, Teaching Methods

The report presents findings from a 5-year investigation of teaching strategies and their effects on learning stages in severely handicapped students. Learning records of most of the students were found to resemble those of nonhandicapped learners, although some students demonstrated erratic variations in performance due to compliance problems. In the third project year decision-rules were formulated to help teachers identify problems in acquisition, fluency building and compliance from the students' performance records. Effectiveness of teachers who used the decision-rules was analyzed in terms of improvements in pupil performance and/or rate of progress. In year 4, teachers applied a revised set of decision rules based on questions concerning pupil data. Problems with noncompliance in children were noted and interventions attempted. Decision-rules were integrated with a minimum acceleration procedure in which the teacher specifies a minimum rate of change. Year 5 activities examined the learning of the decision-rules by 81 teachers in a wide variety of settings with varying amounts of training and assistance. Adoption of the rules resulted in successful decisions and reduced planning time. Cost data were also examined. Four site reports are presented in the document's conclusion. (CL)

The Development of Fundamental Skills in Tactile Graph Interpretation: A Program for Braille Readers. Final Report.

American Printing House for the Blind, Louisville, Ky.

Spons Agency—Office of Special Education and Rehabilitative Services (ED), Washington, DC.

Pub Date—Sep 83
Grant—G008001878

Note—34p.

Pub Type—Reports - Evaluative (142)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Blindness, *Braille, Elementary Secondary Education, *Graphs, *Tactile Adaptation

The report describes the development and evaluation of an instructional program in tangible graph interpretation for braille readers. Because graphs frequently appear in textbooks and in other printed sources, lack of appropriate translation for blind persons can be a significant educational obstacle. Based on analyses of typical graph reading tasks, skills and concepts fundamental to the graph reading process were identified and then incorporated into a logically sequenced instructional program. A high priority was given to the application of relevant research findings in the areas of display design and skills training. The effectiveness of the program was assessed using 60 braille readers in grades 5-10. The results indicated that substantial gains in graph literacy could be realized with the program in a relatively short time. (Author/CL)

Descriptors—Communication (Thought Transfer), *Disabilities, Infants, *Interaction, *Intervention, *Mothers, *Parent Child Relationship, *Social Development

The report presents summaries of findings from three substudies dealing with the early interaction patterns between handicapped infants and their mothers. The first substudy compared dyads composed of handicapped and nonhandicapped infants and their mothers. Analysis of videotaped observations, questionnaires and diaries completed by mothers revealed that the looking patterns of the two groups were more similar than not, although the similarity may diminish with age. Influences of age and mother vocalization on infants' toy play behavior were noted. Results suggested that mothers of handicapped children must make greater effort to promote parent-child interaction than mothers of nonhandicapped children. Substudy 2 provided a more in-depth analysis of the interactions of seven dyads, five with handicapped babies and two with normally developing infants. The final substudy tested the efficacy of direct intervention on the interactive process between three mothers and babies. Findings stressed the importance of the interactions being pleasurable for both participants and demonstrated that intervention can change the nature of social interaction by making it more pleasurable and communicative. EDRS Price - MF01/PC11 Plus Postage.

Descriptors—Adults, *Art Products, *Disabilities, Elementary Secondary Education, *Handicrafts, Leisure Time, Teaching Methods

The report summarizes accomplishments of a project designed to provide mainstream leisure art and involvement in Appalachian crafts for mildly handicapped students through (1) the development of an Instructional Materials Development System and (2) the creation and pilot testing of instructional program packages that exemplify the use of this system. The application of the Four D model (defining, designing, developing, and disseminating) to the development of folk craft instructional materials is reviewed. Formative evaluation comments and recommendations are listed for the instructor's manual, which was then pilot tested on a group of potential users. Pilot testing of the instructional packages revealed that instructors were able to successfully teach folk craft processes using the project's materials. Dissemination efforts included presentation at professional conferences and meetings and short- and long-term demonstrations of project materials. Project findings revealed increased confidence in students who participated in community craft fairs and exhibits and suggested the value of encouraging cooperative programming efforts among public schools and parks and recreation agencies. Among seven appendices are sample materials review forms and information on task analysis. An attached booklet presents excerpts from interviews with 12 handicapped adults who actively pursue crafts. Descriptors—*Disabilities, *Interaction, *Linguistics, *Parent Child Relationship, *Parent Role, Preschool Education, *Teaching Methods
Twenty-three parent/child dyads (16 normally

developing and 7 developmentally delayed preschoolers) were observed in a study to describe the verbal-logical behaviors and content expressed while they were engaged in teaching/learning interactions, and to determine if the structure of the activity, the sex and/or the developmental status of the children, or the sex/role of the parents influenced those behaviors. Dyads engaged in a semi-structured free play activity followed by a structural block sorting task. An observation system was used which permitted coding of verbal behaviors in terms of linguistic forms, communicative functions, and content references. Results of analyses of variance revealed that the activity factor had the greatest impact on the expressed behavior. The activity influenced both parent behavior (including frequencies of initiating, asking questions, and giving orders) and child behavior (such as soliciting, requesting or providing substantive information, and cooperating). The only behaviors differentiating groups of parents and their children were their verbalizing and references to spatial relationships and classification. The activity also exerted the most influence on sequences of behaviors. Few parent sex/role differences were observed. (CL)

Designing, Monitoring, and Implementing Behavioral Interventions with the Severely and Profoundly Handicapped.

Iowa State Dept. of Public Instruction, Des Moines. School Psychological Services.

Pub Date—Oct 83

Note—203p.; For the first manual in this series, see EC 161 837.

Pub Type—Guides - Non-Classroom (055)
EDRS Price - MF01/PC09 Plus Postage.

Descriptors—Behavior Modification, Elementary Secondary Education, *Intervention, Program Development, Program Implementation, *Severe Disabilities, Student Educational Objectives, Student Evaluation

This manual, the second of a two-part study, addresses issues involved in behavioral interventions with low incidence, severely handicapped students. Initial chapters focus on selecting appropriate goals, writing behavioral objectives, and selecting observational systems to measure behavior change. General treatment procedures for increasing and decreasing behavior as well as for teaching new behavior are reviewed. Specific behaviors (toileting skills, self-care skills, self-stimulation, and self-injurious behavior) are considered in a fourth chapter. Techniques for maintenance and generalization of behavior change are described in chapter 5, followed, in chapter 6, by a review of adaptive equipment and electronic technology for individuals with severe physical disabilities. A final chapter presents six guidelines for implementing programs, including examining potential negative consequences of reinforcers and providing adequate training for all personnel involved in the treatment procedures. EDRS Price - MF01/PC04 Plus Postage.

Descriptors—Elementary Secondary Education, *Evaluation Methods, *School Psychologists, *Severe Disabilities, Staff Role, *Student Evaluation

This manual, the first of a two-part study, describes an assessment and planning approach which school psychologists may employ in working with low incidence, severely handicapped students. Past assessment approaches are criticized for being non-functional and largely irrelevant; the proposed approach is directed to helping students achieve the criterion of ultimate functioning. Research is considered on the role of school psychologists and on the evolution of assessment strategies for individuals with low incidence handicaps. Six phases of the functional, chronologically age appropriate assessment/planning system are reviewed: collection of background information, observation, preliminary ecological analysis, data based evaluation, and evaluation of results. An example of a parent/guardian inventory is provided. (CL)

Descriptors—*Disabilities, Elementary Secondary Education, Models, Recordkeeping, Reports, *School Psychologists, *Student Records, *Technical Writing

The guide describes approaches and considerations involved in school psychologists' communication of information in reports. Following an initial tongue in cheek discussion ("On Skinning Cats, Choking Dogs, and Leaving Lovers") of principles of report writing (such as avoiding using the language of logic and not contaminating interpretations with validating data) by J. Grimes and G. Ross-Reynolds, the same writers focus on "Three Counter Proposals to the Traditional Psychological Report," in which revised formats of the same psychological report are presented. G. Batsche describes "The Referral Oriented Consultative Assessment Report Writing Model," which progresses from review of data through consultative interviews with the referral agent and selection of appropriate assessment procedures for referral questions to selecting intervention procedures. In "Psychoeducational Reports: Converging Multifaceted Assessment," F. Gresham reviews the multi-trait-multimethod approach to test validation and applies the model to psychoeducational assessment and decisionmaking. In a final paper, "Three Year Reevaluations: An Alternative to the Reevaluation-Means-Retest Model," J. Ross-Reynolds details a model that is both summative and formative. (CL)

Descriptors—Elementary Secondary Education, Evaluation Methods, *Learning Disabilities, *Mathematics, *School Psychologists, *Spelling, *Student Evaluation, Teaching Methods, *Writing (Composition)

The manual is intended to help school psychologists determine strengths and weaknesses, establish goals, and prescribe interventions for students with

difficulties in mathematics, spelling, and written language. Research on sources of mathematical difficulties, theoretical bases, and hierarchies in mathematics is reviewed, procedures for formal and informal assessment (including task analysis and error pattern analysis) are discussed, and suggestions are offered for mathematics remediation. The section on spelling considers models, factors influencing performance, and specific spelling disabilities. The diagnosis of spelling problems is addressed, as is instruction/remediation based on assessment information. The final section focuses on written expression noting the sequence of skills, diagnostic considerations, and suggestions for remediation/instruction. Each section concludes with extensive appended material (e.g., check lists of skills and types of individualized instruction). (CL)

Identifiers—Iowa

The booklet describes four model autism sites that were funded in Iowa from 1980 to 1983. Each project's structure, goals and accomplishments, and future tasks are noted. The first project included an interdisciplinary autism resource team and a center-based, self-contained demonstration classroom. The second was a rural delivery model providing consultation, diagnosis, and direct services to autistic children and their parents. The third project focused on developing exemplary delivery systems in the current program and contrasting these systems with the self-contained model. The fourth and final project included emphasis on placement in the least restrictive environment and curriculum development for community/vocational competencies as well as school competencies. Appended materials include a list of characteristics of students with autism and of curriculum tasks in educational, domestic, leisure, communication, and community functioning domains. (CL)

Descriptors—Behavior Modification, Ethics, Mental Retardation, Program Development, Program Implementation, Punishment, Timeout Identifiers—Overcorrection

Two newsletters review the principles and application of two behavior modification techniques with mentally retarded persons: overcorrection and punishment. Overcorrection may be either restitutional, in which the client is made to restore the environment to a far better state than before the inappropriate behavior occurred, or positive practice overcorrection, in which the child overpractices correct forms of behavior incompatible with the behavior to be eliminated. Suggestions are given for developing and implementing an overcorrection procedure, as well as for assessing the treatment's effectiveness. Clinical examples of the approach used with such maladaptive behaviors as vomiting, food stealing, and self-injurious behavior are cited. Punishment is defined and two types of aversive stimuli (primary and conditioned) are described. Characteristics of punishment are noted, and the major types of punishment programs (response cost, time-out, and primary aversive techniques such as electric shock and ammonia inhalation) are considered. Following a brief examination of examples of using primary and conditioned aversive stimuli, ethical factors and possible non-therapeutic effects are addressed. (CL)

Note—254p.; For original edition, see ED 143 179.

Pub Type—Reference Materials - Bibliographies (131)

EDRS Price - MF01/PC11 Plus Postage.

Descriptors—Adjustment (to Environment), Annotated Bibliographies, Attitudes, Behavior Modification, Civil Rights, Disabilities, Elementary Secondary Education, Emotional Disturbances, Genetics, Hearing Impairments, Language Acquisition, Learning Disabilities, Mental Retardation, Parent Role, Personal Narratives, Prevention, Sex Education, Sexuality, Special Education, Special Health Problems, Visual Impairments

Intended for parents of children with disabilities, the guide lists and provides information on helpful books. Part I presents annotations on books relevant to all disabilities. Topics covered include personal accounts, early intervention at home, special education rights, and disabled adults. Part II focuses on specific disabilities: autism, chronic illness, emotional/behavioral handicaps, epilepsy, hearing handicaps, hyperactivity, learning disabilities, mental retardation, multiple handicaps, physical handicaps, speech handicaps, and visual handicaps. Ten specific topics of interest are addressed in part III: attitudes, behavior modification, death and dying, genetics and genetic counseling, language development, planning for the future, prevention, rights of children, rights of persons with disabilities, and sexuality and sex education. Books for children about children with handicaps are listed in part IV, while references written by people with disabilities are compiled in part V. The guide concludes with a list of relevant journals, directories, and indexes. (CL)

Basic Concept Acquisition in Learning Disabled Children.

Pub Date—[80]

Note—16p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Age Differences, Cognitive Development, Concept Formation, Elementary Education, Learning Disabilities

The Boehm Test of Basic Concepts (BTBC) (Bo-

ehm, 1971) was administered to 99 children (ages 7-10) who had been diagnosed as learning disabled and attended special schools in the New York area. It was hypothesized that the learning disabled children would exhibit a delay in the acquisition of the basic concepts, but would display a similar order of acquisition of the concepts as compared to the normative sample of the BTBC. The results indicated that the 7- to 9-year-old learning disabled (LD) children scored significantly lower than the normative sample of 7-year-old children. Kendall Correlations computed between the normative sample and the LD children indicated that the rank-order of difficulty of basic concept acquisition was similar in the two groups. Results supported the hypothesis that learning disabled children acquire basic concepts at a later age than normal. Subjects acquired concepts in the same order as the normative population. Partner Learning in Educational Settings: Taking a Cue from the Kids.

Pub Date—Oct 83

Note—21p.; Paper presented at the Annual Conference of the Council for Learning Disabilities (5th, San Francisco, CA, October 6-8, 1983).

Pub Type—Speeches/Meeting Papers (150) - Information Analyses (070)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Cooperation, Disabilities, Elementary Secondary Education, Peer Teaching, Student Teacher Relationship, Teachers, Teamwork

Benefits of collaborative learning as achieved in peer tutoring approaches are considered, and the suggestion is made that partner learning may be just as beneficial for disabled and normal adults as it is for children. Research is reviewed on the benefits of partner learning for all parties involved: for the tutee (increased individualized attention, increased contact and opportunity for closeness with the instructor and corresponding learning efficiency, influence of a role model, and gains in self-esteem); for the tutor (increased subject area knowledge, improved social skills and self-esteem, and the opportunity to help others); and for the teacher (help with individualized instruction, increased attention for low performers, cost-effectiveness, and increased positive interactions between teachers and students). Research on partner learning effects on adults is limited, but the possibilities for effective use of adult teaming situations should be considered. (CL)

Child-Child Social Interactions: An Analysis of Assessment Instruments for Young Children [and] Sourcebook.

Ohio State Univ., Columbus. Herschel W. Nisonger Center.

Pub Date—[81]

Note—321p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC13 Plus Postage.

Descriptors—Aggression, Cooperation, Disabilities, Evaluation Methods, Friendship, Interpersonal Competence, Peer Relationship, Social Development, Student Evaluation, Tests, Young Children

Existing assessment instruments (N=54) containing items in the area of early child-care social development were examined in terms of their usefulness with regard to intervention oriented assessment for handicapped children. Tests included four major types: early childhood, social behavior, criterion referenced, and clinical tests. The frequency, consistency, compatibility with developmental knowledge, and diversity of peer related test items were evaluated for individual content areas including social participation, cooperation, aggression, and friendship. Psychometric and item administration properties of tests were also evaluated. Results indicated major inadequacies for all dimensions investigated. Recommendations were made for future test development in the areas of peer relations. A sourcebook accompanying the documents presents charts of social and clinical items with peers, noting situations, scoring, and status of each item. (CL)

Accessible Elementary Schools: A Renovation Planning and Design Manual. [Final Report]. Peoples Housing, Inc., Topanga, Calif.

Spons Agency—Special Education Programs (ED-OSERS), Washington, DC.

Pub Date—Mar 81

Grant—G007902653

Note—378p.

Pub Type—Guides - Non-Classroom (055)

EDRS Price - MF01/PC16 Plus Postage.

Descriptors—Accessibility (for Disabled), Building Design, Classroom Environment, Design Requirements, Disabilities, Elementary Education, Environmental Influences, School Buildings

The manual is intended to help school districts comply with federal mandates for physical accessibility and least restrictive settings for handicapped elementary school children. A general introduction to the accessibility concept in chapter 1 considers the historical background, the role of the physical environment, and existing federal guidelines and regulations. Results of a survey of over 50 schools are reported in chapter 2, along with illustrations of 22 common problems (such as inadequate fire safety provisions, circulation hazards, unsafe stairs, limited access in libraries, inadequate furniture and cabinetry, and playgrounds not designed with disability in mind). Chapter 3 focuses on accessibility implementation, noting planning factors, problem identification, and cost estimating procedures. The fourth chapter presents technical information for the design of barrier free renovations, presenting solutions to problems posed in chapter 2. In the final chapter, case studies illustrate actual schools' application of design guidelines in renovating facilities. (CL)

Formacion Profesional del Maestro Especial en America Latina y el Caribe = Professional Education of the Special Teacher in Latin America and the Caribbean.

Pub Date—Sep 81

Note—50p.; Paper presented at the National Congress on Mental Deficiency (1st, Mexico City, Mexico, September 5-9, 1981).

Language—Spanish; English

Pub Type—Reports - Evaluative (142) - Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Disabilities, Educational Trends, Elementary Secondary Education, Foreign Countries, Special Education, Teacher Shortage, Teacher Supply and Demand, Trend Analysis

Identifiers—Latin America

The paper, in Spanish, with a lengthy English summary, analyzes the status of special education in Latin America and the Caribbean. Noting that many countries in the region lack a substantial system of special education, the paper proceeds to examine models for personnel training. Approaches for university-based teacher training as well as for less expensive programs to train paraprofessionals are described. Large shortages of qualified special education teachers are forecasted and results of an analysis of nine training models in Costa Rica, Venezuela, Colombia, Ecuador, Peru, Chile, Uruguay, and Paraguay are presented. Among conclusions drawn from the study are that there is a wide diversity in origins, admission criteria, academic levels, structures, and curricular contents of the programs; there should be increased sequence among all of them to improve regional training efforts; and conventional training strategies will never meet the projected needs for personnel. A Consumer's Guide to Bill 82: Special Education in Ontario. Occasional Papers/22.

Ontario Inst. for Studies in Education, Toronto.

Report No.—ISBN-0-7744-0259-8

Pub Date—83

Note—106p.

Available from—The Ontario Institute for Studies in Education, 252 Bloor St. West, Toronto, Ontario M5S 1V6.

Pub Type—Legal/Legislative/Regulatory Materials (090)

Document Not Available from EDRS.

Descriptors—Disabilities, Elementary Secondary Education, Handicap Identification, Legal Responsibility, Legislation, Parent Role, Referral, Special Education, Student Evaluation, Student Placement

Identifiers—Bill 82 (Ontario), Ontario

The text provides an overview of the content and

implications of Bill 82, Ontario's special education act. Chapter 1 reviews the bill's contents which emphasize five principles: universal access, education at public expense, the appeals process, appropriate programming, and ongoing identification and continuous assessment and review. Chapter 2 documents the identification and placement processes along with avenues of appeal. School board planning and implementation requirements and guidelines are considered in the fourth chapter. Chapter 5 analyzes the implications of the legislation on individual schools and teachers. The parent's role in placement is emphasized in the sixth chapter, which also discusses appeal procedures and more informal recourse methods. Teacher liability is the topic of chapter 7, followed by two case studies illustrating issues of access to school programs. (CL)

Recording for the Blind's Catalog Conversion for Online Searching.

Pub Date—May 83

Note—16p.; Paper presented at the Conference on Academic Library Services to Disabled Students (Tallahassee, FL, May 6-7, 1983).

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Blindness, Computer Programs, *Library Services, Physical Disabilities, *Special Libraries, Visual Impairments

Identifiers—*Recording for the Blind

The paper describes the growth in services of Recording for the Blind, an organization supplying blind and other print-handicapped persons with free, taped educational books in cassette form. Increased acquisition at all age levels and expansion of computer capabilities to create an online subject catalog to the materials are noted. Details of planning procedures for the online catalog are given, as are current operating procedures and staffing functions (the staff grew to four professional librarians). Training and practice in subject searching is described. Five steps involved in subject searching from initial contact with the reference librarian to collecting book references for the patron are summarized. (CL)

Tailoring Library Services to the Needs of Disabled Users.

Pub Date—May 83

Note—22p.; Paper presented at the Conference on Academic Library Services to Disabled Students (Tallahassee, FL, May 6-7, 1983).

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Accessibility (for Disabled), *College Libraries, *Disabilities, Higher Education, *Library Services

Identifiers—University of California Berkeley

The General Library at the University of California, Berkeley, has made its collection physically and intellectually accessible to disabled users. A task force convened to discuss ways to meet the needs of disabled students has met regularly since 1981. Among changes undertaken as a result of the task force are the appointment of a resource coordinator of library services to the disabled, the development of a policy statement on the library's commitment to serving disabled users, instruction for library staff on type and amount of assistance to be offered, workshops on the needs of disabled students, and the establishment of a network of contact persons within branch libraries. Among other services offered are photo copying and delivery of course reserve reading materials and use of special devices for visually impaired students. A policy manual on library services to disabled users is among appended material. (CL)

Annotated Bibliography of Materials on Academic Library Service to Disabled Students.

Pub Date—May 83

Note—31p.

Pub Type—Reference Materials - Directories/Catalogs (132)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Academic Libraries, Accessibility (for Disabled), Annotated Bibliographies, Attitudes, College Students, Disabilities, Higher Education, Library Equipment, Library Instruction, *Library Services

The bibliography lists approximately 120 references (1978-83) on academic library services for disabled students. The bibliography was developed from a literature search of five indexes: "Library Literature," ERIC, "Dissertation Abstracts," LISA, and CIJE. Entries are arranged alphabetically by author and include title, source, date, page information, and a brief summary. Among topics addressed are building accessibility, attitudes, orientation maps, community college libraries, audio-visual aids (such as the Optacon and the Kurzweil Reading Machines), computerized aids, reference material, and library instruction. The Diagnostic Index: A Criterion for Further Evaluation and Intervention with At-Risk Preschool Children.

Pub Date—[83]

Note—19p.

Pub Type—Reports - Descriptive (141) — Guides

Non-Classroom (055)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Disabilities, *Handicap Identification, Preschool Education, *Referral, *Screening Tests

Identifiers—Diagnostic Index

In an attempt to provide technically adequate screening with criteria for referring children for further evaluation, the Diagnostic Index (DI) was developed. The DI expresses the relationship between a child's chronological and developmental ages, identifies as a percentage of normal development the discrepancy between age appropriate behaviors and the behaviors the child exhibits. Testing of the DI indicated that when used with recommendations from the screening team, the DI substantially decreased the probability that delayed preschoolers would be overlooked during the screening phase. Among considerations in using the DI are that the DI should be computed within and across domains to reveal a more accurate and reliable picture of the child's functioning and that the cutoff point should be moved upward to safeguard against overlooking delayed preschoolers. Note—16p.; Paper presented at the Annual Meeting of the Western Psychological Association (San Francisco, CA, April 27-30, 1983).

Pub Type—Speeches/Meeting Papers (150) — Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Adaptive Behavior (of Disabled), Adjustment (to Environment), Adults, Blacks, *Family Relationship, *Friendship, *Mild Mental Retardation, *Social Adjustment, Social Influences

The paper describes a study of the relationship between social support and well-being among 24 mildly mentally retarded Afro-American adults living with family, in group situations, or independently. Detailed observations, interviews, and questionnaires were used to collect data on the structural characteristics of the Ss' networks, use of ties as coping mechanisms, nature of transactions between study participants and ties, and the qualitative aspects of specific critical social ties. Results indicated reliance on kin ties to provide a variety of support and suggested that degree of familial embeddedness was a primary determinant of the extent to which non-kin ties were developed. Successful adaptation to independent living and a more balanced network structure appeared to be related to the degree of responsibility given and contributions made in the home. The need for preparing retarded adults to form rewarding and useful non-kin ties were pointed out. (CL)

Beyond Behavioral Objectives: Criteria.

Pub Date—3 Nov 83

Note—10p.; Paper presented at the Annual Conference of the Association for the Severely Handi-

capped (10th, San Francisco, CA, November 3-5, 1983).

Pub Type—Speeches/Meeting Papers (150) — Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Behavioral Objectives, *Criteria, *Disabilities, Elementary Secondary Education

The presentation addresses ways in which appropriate criteria for behavioral objectives with the severely handicapped are developed. Two kinds of criteria—those that established specified units and those that provide a standard to determine when the student has completed work on a specific objective—are identified. Specific considerations in selecting criteria are discussed and examples given for each: functionality, safety, social acceptability, normalization, accuracy, evaluability (all criteria should be measurable), random occurrence (which may make it difficult to determine whether mastery or luck was responsible for performance), and overlearning (enough practice to insure that the skill will maintain after discontinuation of instruction). Developing Community Housing Services for Blind and Deaf-Blind Students Who Have Completed Our Training Programs—What Is Our Professional Responsibility?

Pub Date—30 Jun 82

Note—49p.; Paper presented at the National Conference of the Association for Education of the Visually Handicapped (Vancouver, British Columbia, June 30, 1982).

Pub Type—Speeches/Meeting Papers (150) — Reports - Descriptive (141)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Blindness, *Community Programs, *Daily Living Skills, Deaf Blind, Group Homes, Housing, *Multiple Disabilities, *Program Development, *Residential Programs, Secondary Education, Visual Impairments

Identifiers—Perkins School for the Blind MA

The paper describes the community residence and independent living services offered by Perkins School for the Blind which serves multi-impaired, blind, visually impaired, and deaf blind individuals. The first part reviews existing community living options and emphasizes the need for thorough diagnosis, extensive training in daily living skills and community experience curricula, inservice training for all staff, and cooperation between educators and rehabilitation personnel. The development of the Perkins' program is traced and its current status, which includes an apartment project and houses used for residential programming for 57 clients, is described. The author suggests that educators must become familiar with real estate concepts and principles and with aspects of estate and trust planning. (CL)

Interdependence: The Need for Person-Environmental Analysis and the Individual Transition Plan.

Pub Date—4 Nov 83

Note—19p.; Paper presented at the Annual Conference of the Association for the Severely Handicapped (10th, San Francisco, CA, November 3-5, 1983). Pie charts may not reproduce well.

Pub Type—Speeches/Meeting Papers (150) — Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Agency Cooperation, *Delivery Systems, *Disabilities, Evaluation Methods, Models, *Systems Approach, *Transitional Programs

The paper focuses on catalysts needed for interagency cooperation in multi-service delivery systems for handicapped individuals. The importance of interfacing personal and environmental profiles is emphasized, and an approach matching aspects of the person and the environment is described. A behavioral skill profile of the person would be matched with environmental characteristics (including available living-work options, behaviors required to adapt successfully to the environments, and the personality characteristics of the environment). Two case histories illustrate ways in which a person-environmental profile can be used in skill training, procuring prostheses, and modifying the environment. A second catalyst, systematic transitional planning, is considered in terms of an ITP (Individualized Transition Plan) model which addresses client and systems-level needs. (CL)

Vocational Curriculum for Multihandicapped Students with Cerebral Palsy: A Data-Based Approach.

Spons Agency—Department of Education, Washington, DC.

Pub Date—Nov 83

Contract—82-37-300-82-0357

Note—27p.; Paper presented at the Annual Conference of the Association for the Severely Handicapped (10th, San Francisco, CA, November 3-5, 1983).

Pub Type—Speeches/Meeting Papers (150) — Reports - Descriptive (141)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Adolescents, Case Studies, *Cerebral Palsy, Clerical Occupations, Computers, Curriculum, *Employment, *Job Skills, Job Training, Microproduction, *Multiple Disabilities, Office Occupations, Task Analysis, *Teaching Methods, *Vocational Education, Young Adults

The paper describes a data-based vocational curriculum for multiple handicapped adolescents and young adults with cerebral palsy. Three case studies illustrate the different types of curricula that may lead to employment in the areas of micrographics filing, computer skill, and clerical work. The approach incorporates a task analysis orientation with modeling, social reinforcement, and frequent feedback. Objectives and skill sequences were drawn from observation of identical jobs in companies in the community. In each setting, attention was paid to modifying or adapting tasks where necessary to help improve vocational performance. Participants in each of the areas displayed competence after training. (CL)

Generalized Compliance Training: A Direct Instruction Program for Managing Severe Behavior Problems.

Pub Date—4 Nov 83

Note—23p.; Paper presented at the Annual Conference of the Association for the Severely Handicapped (10th, San Francisco, CA, November 3-5, 1983).

Pub Type—Speeches/Meeting Papers (150) — Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Behavior Modification, *Severe Disabilities, Teaching Methods

Identifiers—*Generalized Compliance Training

Five case studies illustrate the use of generalized compliance training with students who have severe behavior problems. Based on extinction and generalization processes, the approach consists of five phases: (1) assessment to determine the nature and severity of noncompliance; (2) initial instruction demonstrating the consequences of compliance and noncompliance; (3) provision to permit responses to major and minor noncompliance; (4) use of a pre-correction before the learner engages in activities that prompt noncompliance; and (5) final training involving instructional sets and targeting of less obvious inappropriate behaviors. Procedural safeguards that should be in place prior to program implementation are outlined. Case studies depict the effectiveness of generalized compliance training with multiply handicapped, disturbed, profoundly retarded, and autistic students. The program produced changes relatively quickly and durably. (CL)

Moving: A Format for Providing Functional Information for Persons with Severe Disabilities Transferring to Another Home.

Leon County Schools, Tallahassee, Fla.

Pub Date—Nov 83

Note—12p.; Paper presented at the Annual Conference of the Association for the Severely Handicapped (10th, San Francisco, CA, November 3-5, 1983).

Pub Type—Speeches/Meeting Papers (150) — Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Agency Cooperation, *Deinstitutionalization (of Disabled), Elementary Secondary Education, Institutionalized Persons, *Severe Disabilities, *Transitional Programs

To ease the transition from institutions to other school districts, the Sunland (Florida) Public School developed "transfer packets" for each severely

mentally and physically handicapped person who was moving. Written by teachers, therapists, medical and other professional staff, the packets contain information regarding individual student's medical needs, likes and dislikes, educational strengths and weaknesses, individualized programs, and other pertinent details. Pictures of each student engaged in the actual activities accompany the narrative material. Planning considerations involved issues of format, production, and resources. Success of the approach relied on coordination with receiving districts and the residential facilities. Although considered a good idea, the packets were found to be expensive in terms of staff time. Descriptors—Age, Basic Skills, *Curriculum Development, *Daily Living Skills, Elementary Secondary Education, Recordkeeping, *Severe Disabilities, *Severe Mental Retardation, *Student Educational Objectives

The curriculum for severely mentally and multiply impaired students lists annual goals, short-term instructional objectives, and performance objectives in nine content areas: cognitive, social, communication, self-care, fine motor, gross motor, independent/functional living, prevocational training skills, and leisure/recreation. The underlying philosophy incorporates traditional content instruction with age appropriate activities. Activities are further designed to promote acquisition of meaningful and relevant skills, allowing for partial participation as a goal for some students. Recordkeeping procedures are discussed for each content area, and examples of completed forms are appended. (CL)

Community Volunteers as Paratherapists for Significantly Handicapped Children.

Pub Date—Nov 83

Note—21p.; Paper presented at the Annual Conference of the Association for the Severely Handicapped (10th, San Francisco, CA, November 3-5, 1983).

Pub Type—Speeches/Meeting Papers (150) — Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Paraprofessional School Personnel, Preschool Education, *Professional Education, *Severe Disabilities, Teacher Shortage, *Volunteers, Workshops

The paratherapist training project was begun to increase training time provided to severely and profoundly handicapped students. Twenty-one retired persons volunteered to participate in a series of skill training modules that touched upon the following topics: observation, skill training, placement, individual or small group work, and daily and weekly staffings. Ss exhibited increases in knowledge and skills related to preschool exceptional children. Increases were maintained over a 2-year period. Additional project success included increases in direct contact time from 132 to 400 hours per child yearly and substantial increases in developmental ages of the students. Findings suggested that such an approach may alleviate the manpower shortage in special education. (CL)

Descriptors—*College Students, *Learning Disabilities, *Psychological Characteristics, Student Evaluation

The paper considers issues in intelligence testing

of learning disabled (LD) children and adults and reviews results of psychological testing of LD students at the University of Virginia (UVA). Tests administered include neurological screening tests and personality assessments where appropriate. It is explained that the matriculating LD student is academically competitive with many peers. Intellectual/cognitive data of 62 UVA LD students are presented, and it is noted that learning difficulties of many students went undiagnosed before entrance. No general pattern in test scores was found to exist, although subgroups of the sample evidenced differences on both IQ and subtest scales. Analysis of coping styles pointed up the need to reduce depression and reinforce autonomy and individuation. (CL)

The Process of Composition Instruction with Students with Brain-Injury, Brain-Damage or Neurological Impairment.

Pub Date—Mar 83

Note—11p.; Paper presented at the Annual Meeting of the Conference on College Composition and Communication (34th, Detroit, MI, March 17-19, 1983).

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Elementary Secondary Education, *Neurological Impairments, *Teaching Methods, *Writing (Composition)

Suggestions are offered for teaching composition to brain-injured, brain-damaged, neurologically impaired students. Teachers are cautioned to choose a limited topic based on students' concrete experiences, concentrate on setting up generalizations and theses, and help students consider ways to expand and organize the topic. For creative writing, the paper suggests introduction of ideas of plot, character, theme, and style, with a gradual transition to abstractions. Then short novels can be presented and summarization and analytical skills practiced. Additional areas for composition instruction are letter writing, test taking skills, and research skills. The development, repetitive, supportive nature of composition instruction for this population is stressed. (CL)

Descriptors—*Athletics, Elementary Secondary Education, *Mental Retardation, *Swimming, Task Analysis, Teaching Methods

One of five parts of the Special Olympics' Sports Skills Instructional Program, the booklet addresses ways to teach swimming and diving to mentally retarded students. Short term objectives of the program encompass warmup, basic swimming and diving skills, safety, and good sportsmanship. The long term goal focuses on acquisition of basic skills, appropriate social behavior, and functional knowledge of safety to enable participation. Following information on clothing, pool preparation and equipment, skills assessment and teaching suggestions are presented for two levels of swimming skills (kicking, front and back crawl, side stroke, breast stroke, front dive, diving approach, advanced front dive, and backward dive. Suggestions are also given on infusing the sport skill to other curriculum areas. (CL)

Soccer: Special Olympics Sports Skills Instructional Program.

Joseph P. Kennedy, Jr. Foundation, Washington, D.C.

Pub Date—[81]
Note—71p.; For related documents, see EC 161 875-879.

Available from—Special Olympics, Inc., 1701 K St., N.W., Suite 203, Washington, DC 20006.

Pub Type—Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Athletics, Elementary Secondary Education, *Mental Retardation, *Soccer, Task Analysis, Teaching Methods

One of five guides in the Sports Skills Instructional Program of the Special Olympics, the booklet describes an approach to teaching soccer skills to mentally retarded persons. An introductory section lists the goals, objectives, and benefits of the program and provides criterion referenced instruments to assess the individual's current functioning level. Specific skills in two levels of difficulty are then described in terms of task analysis and teaching suggestions for: dribbling, kicking, passing, trapping, tackling, heading, throwing in, goal keeping, and defensive play. Three subjects conclude the units: team tactics, rules, and sportsmanship. The program is designed to promote skill infusion into general academic areas. (CL)

Pub Type—Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Athletics, *Elementary Secondary Education, *Mental Retardation, *Skiing, Task Analysis, Teaching Methods

The last of five booklets on specific sports instruction in Special Olympics presents information on teaching cross country skiing to mentally retarded persons. The approach uses goals, short term objectives, task analyzed activities, assessments and teaching suggestions for individualizing and integrating the sports skills instruction with other curriculum areas. Instruction is designed to be given by volunteers. Initial sections discuss hints for being a good teacher, organizational suggestions, and information on clothing, equipment and a dryland training program. A skills assessment determines the student's present functioning level. The following specific skills are addressed: ready position, recovery, forward walking, star turns, climbing, straight run, wedge, turns, diagonal stride, and double poling. Sections on rules and safety and racing conclude the guide. (CL)

Identifiers—PF Project

Characteristics of the gifted and ideas for working effectively with gifted students are presented in this guide for teachers. A list of behavioral traits exhibited by gifted students precedes a discussion of the myth that gifted individuals can be expected to perform perfectly in all areas of endeavor. Included in a discussion of learning characteristics are ways teachers can plan the learning environment and develop good student-teacher relationships. Seven suggestions for adapting instruction for the gifted child are listed. A student interest survey is included which will help the teacher plan for individual student needs. The survey, in the form of a checklist for the student, lists activities in the categories of writing, reading, science, studying, dramatics, music, mathematics, art, hobbies, and sports. (JH)

Identifiers—PF Project

This handbook is designed to help parents understand, encourage, and help their gifted children. A brief overview includes discussions of the meaning of the term "gifted," the identification of gifted children, and the goals of gifted education. Parents are advised to assist their children with time management, decision making about time and activities, appropriate behavior, responsibility for routine tasks, task completion, and time for daydreaming. It is recommended that parents as role models should provide enough psychological freedom and safety to allow children to take chances and make mistakes. Assisting children in setting realistic goals is discussed as another function of parents as role models. The use of leisure time is discussed, including the examination and management of parents' leisure time activities as examples for children. Suggestions are given for creating a stimulating environment with trips, reading time, hobbies, supervised experiments, writing, and verbal expression. Praise for specific accomplishments is recommended to reinforce children's self-concept. Answering questions and providing time for questions also is presented as an important task for parents. (EM)

Identifiers—PF Project

This pamphlet is designed to help parents serve as advocates for the adoption of gifted programs in their local school districts. Rebuttals are offered to six myths about gifted students which commonly are used to deny gifted programs. Step-by-step methods for two strategies for obtaining gifted programs are presented: working from the top down (convincing the board of education and the superintendent that a gifted program is needed) and working from the bottom up (working with a teacher in the local school who is committed to gifted education). Suggestions are also given for protecting the program once it has been established and for organizing a parent advocacy group. (DC)

Identifiers—PF Project, *Rules and Regulations, Transcription

Three short articles about foreign language braille are presented for braille transcribers and teachers of the visually handicapped. Because dictionaries of languages other than English rarely show syllable division, the first article provides guidelines to the syllabification of Latin. The guidelines give specific rules concerning the division of diphthongs and consonantal units, adverbial prefixes, and compound words. The second article gives foreign language transcribers suggestions for dealing with the vocabulary in pictorial exercises. The third article offers advice to transcribers on the appropriate use of the letter sign. (LH)

Jogging Program for Deaf-Blind Students Improves Condition and Reduces Self-Stimulation.

Pub Date—Dec 81

Note—3p.; Also printed in "News...about Deaf-Blind Student Programs and Services in New England."

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Behavior Change, *Cardiovascular System, Conditioning, *Deaf Blind, Elementary Secondary Education, *Exercise, Heart Rate, *Jogging, Physical Development, Physical Recreation Programs, *Positive Reinforcement, Program Descriptions, Prosocial Behavior, Self Mutilation, Stimulation, Student Improvement

Identifiers—PF Project

Four deaf-blind students at the Massachusetts Association for the Blind were involved in a pilot aerobic program consisting of jogging for 15-20 minutes three times a week. Students were chosen based on their enjoyment of this fast movement and they were given clearance for this activity by both a doctor and a physical therapist. The students' pulse rates were taken periodically to determine whether their cardiovascular systems were benefiting from this activity. After the jogging was completed, the students walked back to class where they were given orange juice both as a reward and as a fluid replacement. Many positive changes were seen in these students. This was an excellent opportunity for students to release energy and frustrations with an appropriate activity. The four students displayed a decrease of self-abuse and self-stimulatory behaviors. The physical changes that were made consisted of a lowered resting pulse rate indicating that the cardiovascular system had to work less hard and was operating more efficiently. Since the staff noticed this positive development, more support and assistance were given and requests were made to have more students participate in this activity. Plans were made for expanding the program to incorporate walking, swimming, and mini-trampoline jumping. (EM)

Identifiers—PF Project

The Dawn Hancock Animal Farm, which was developed in 1974 with volunteer labor and over \$100,000 in donations, provides farm experiences for the mentally handicapped students of the Helen J. Stewart School in Las Vegas, Nevada. The farm and animals are part of the school's emphasis on vocational training, and every effort is made to help prepare the students for work after graduation. One of the school's major goals is to enable each student to "become as competent a worker as possible." Las Vegas, with its surrounding rural communities provides, employment opportunities for the students. The operation of the farm involves a number of chores that must be completed each day. Teacher aides and foster grandparents assist the students. The students also receive the school's services which include speech therapy, adaptive physical education, physical therapy, team sports, academic studies, and adaptive music. The farm program gives students an opportunity to develop self-help skills. Positive reinforcement is given through verbal reinforcement, paychecks, and special activities. (EM)

Math & the Dyslexic: Making the Abstract Concrete.

Pub Date—83

Note—5p.

Journal Cit—Suffolk Branch - Orton Dyslexia Society Spotlight; v2 n2 p6-7,3 Fall 1983

Pub Type—Information Analyses (070) — Journal Articles (080)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Abstract Reasoning, Cerebral Dominance, *Dyslexia, Elementary Secondary Education, Gifted, *Learning Disabilities, *Learning Problems, Literature Reviews, *Mathematics Education, Mathematics Skills, Teaching Methods
Identifiers—Mathematically Gifted

Math historian Morris Kline suggests that math instruction should be made concrete and that teachers should not turn kids off by making intuitively understood concepts complex through the use of fancy language. He advocates using pictorial representations and examples of actual physical occurrences. The dyslexic student has special difficulties in math which require even more teaching modifications. Gene Watson, a psychologist from Virginia, believes the problem is lack of training in teaching math and especially in teaching math to learning disabled students. A learning disabled student might have difficulty with sequencing, knowing left from right, borrowing, regrouping, and/or understanding the language of math. A study by Byron Rourke, psychology professor at the University of Windsor, Ontario, indicated that math learning problems are as various as dyslexias and may originate in different parts of the brain. Math specialist Joyce Steeves believes that the educational system creates much of the learning disabilities in math. Children should

not be rushed into left brain tasks too early. A study by Dr. Steeves illustrates the difficulties of identifying mathematically gifted dyslexic students. Gifted dyslexics may score below average on computation, although they are on a par with gifted non-dyslexics on higher level abilities such as abstract reasoning. (DC)

Identifiers—*Project CAST

Project CAST serves educationally handicapped students, ages 14-21, who are receiving special education services for more than half of their school day. The program focuses upon the students' development of skills necessary to foster independent living, wise career decision-making, and successful entry into the world of work. The model uses a carefully designed integration of community and school-based developmental learning experiences. CAST is a four year, four-phase program which offers subject area course credits required for graduation. Students generally enter the program in the ninth grade in Phase I and end the program with Phase IV upon completion of high school. Phases I through IV involve career awareness, career exploration, career investigation, and on-the-job training/work study. Concluding this booklet is a list of available Project CAST items. (JH)

Linguistic Interference in Immigrants' Interlanguage.

Teachers of English as an Additional Language, Vancouver (British Columbia).

Pub Date—83

Note—16p.; in its: TEAL Occasional Papers Volume 7, p69-83, 1983.

Pub Type—Reports - Research (143) — Journal Articles (080)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*English (Second Language), Error Patterns, Foreign Countries, *French, German, *Immigrants, *Interference (Language), *Multilingualism, Oral Language, Polish, *Second Language Learning, Spanish
Identifiers—*Quebec

A study of the linguistic interference of nine multilingual immigrants to the Saguenay Peninsula of Quebec province examined three types of interference in their spoken English. They included: (1) interlingual interference from the mother tongue; (2) intralingual intrusion from structures and lexical items from within English in situations and grammatical contexts in which they are inappropriate; and (3) tertiary interference from the language of the community, French. Of the nine immigrants, three had German as their mother tongue, three had Polish, and three had Spanish. A secondary goal of the study was to establish the pedagogical implications emerging from any third language learning difficulties common to all three language groups or unique to each subject. Over a thousand idiosyncratic utterances in English of the nine individuals were analyzed, and errors were placed in the three interference categories. In all cases, interference from French was almost exclusively observable in lexical transfer with little influence on English syntax or morphology. Interlingual interference from the mother tongue was most predominant in the syntax of all subjects' performance in English, although occurring in lexis as well. Intralingual interference was almost the only source of error in morphology. Three principal pedagogical considerations were found: (1) the mother tongue has a strong influence on performance of third language

learners, and teacher knowledge of the mother tongue would be helpful; (2) because the second language is an active source of lexical transfer, immigrants to Quebec are apt to transfer items directly from French to English; and (3) error analysis shows that communication can be made adequately despite all errors made, resulting in fossilization of errors and resistance to pedagogical intervention. Tables of errors are appended. (MSE)

Reid, Joy M.

Intermediate ESL Composition: The Use of Specific Detail and the Point Paragraph Outline.

Pub Date—82

Note—17p.

Journal Cit—American Language Journal; v1 n1 p25-40 Fall 1982

Pub Type—Guides - Classroom - Teacher (052) — Journal Articles (080)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Course Descriptions, Course Organization, *English (Second Language), *Paragraph Composition, *Prewriting, *Second Language Instruction, Sentence Combining, Sentence Structure, Teaching Methods, *Writing (Composition), Writing Exercises, *Writing Instruction, Writing Skills

A curriculum for intermediate composition for students of English as a second language is presented based on the use of levels of specificity as an organizing principle. The course objective is for students to write well-planned, coherent paragraphs acceptable to the American academic audience, within limited formats. Two additional fundamentals guiding a student's efforts are to write what he knows about, and to write for an audience. The first part of the course is devoted to the identification of the paragraph topic and the narrowing of broad subjects to manageable topics. Then students are introduced to the concept of the topic sentence. Following extended work with student-generated paragraphs, students begin to plan original paragraphs about assigned or student-selected topics. When students can clearly demonstrate that they understand the necessity of using specific detail in paragraph writing, the focus turns to the arrangement of detail in acceptable academic paragraph form, later using the technique of writing the same material in various paragraph formats to compare organizing methods. Cause-and-effect paragraphs are also used as an alternative form. Sample exercises are provided for each course segment and concept. (MSE)

Descriptors—Business Administration Education, Engineering Education, *English (Second Language), *Foreign Students, Graduate Students, *Language Proficiency, Language Skills, *Language Tests, *Research Needs, Second Language Instruction, Student Attitudes, Student Needs, Surveys, *Teacher Attitudes, Testing

Issues arising from the need to develop better English proficiency testing for foreign students are discussed, considering three distinct groups of interested people: (1) the students; (2) decisionmakers responsible for the students' admission through-out the institution, including all faculty; and (3) field specialists, including teachers of English as a second language, linguists, and language teaching and testing researchers. A segment of a study that examined business and engineering graduate students' language difficulties and faculty perceptions of the students' language deficiencies and language skill needs in pursuing academic study is summarized. Priorities for testing are outlined, including: greater knowledge of student characteristics and the role of English in their daily lives; support for research that can be translated into terms useful for administrators; improved linkage between administrators and field specialists; evaluation of the tests now used, from linguistic, psychometric, and practical perspectives; and improved dialogue between teaching and testing specialists. Descriptors—*Articulation (Speech), Code Switching (Language), English, *Interference (Language), *Linguistic Theory, Neurological Organization, *Physiology, Polish, *Second Language Instruction, *Second Language Learning
 The theory of articulatory setting, originally published in 1964, is outlined and expanded on, drawing on experiences with Polish and English. The theory proposes that each language has a unique configuration of articulators accounting for or establishing the natural sounds of that language that give it phonological unity and differentiate it from other languages. Articulatory setting is the tongue's position relative to the teeth. In applying the theory to Polish articulation, it was discovered that English and Polish have opposite articulatory settings, illustrating four points about the theory: (1) although some parts of the tongue are in constant motion in speech, the tongue anchorage is firm and stable; (2) if it can be observed at all, the anchorage is particularly visible during vowel production; (3) the phoneme descriptions of a language must be expressed in terms of anchorage if they are to be useful; and (4) what results in language learning is a compromise between the settings of the native and target languages, producing a foreign accent. It is suggested that articulatory setting be explained to second language learners and be used as a teaching tool, to help students control articulation and work comfortably within each setting. Use of imitation should follow, not precede, students' understanding of articulatory setting. (MSE)

Information on Vietnamese: Education Curriculum and Grading System (For the Purpose of Placement in Schools).
 Arizona State Dept. of Education, Phoenix.
 Pub Date—[75]
 Note—67p.
 Pub Type—Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC03 Plus Postage.
Descriptors—Asian Americans, Comparative Education, *Cultural Context, Cultural Traits, *Curriculum Design, Educational Policy, Elementary Secondary Education, English (Second Language), *Grading, Refugees, Teaching Guides, *Vietnamese People
Identifiers—Holidays, *Vietnam
 Designed to aid public school educators in placing Vietnamese refugees in American schools, this four-part publication describes the Vietnamese educational system. Part 1 outlines subject requirements and their time allotments by grade level. The Vietnamese curriculum is further subdivided into courses for boys and girls where applicable. Part 2 describes the Vietnamese grading system. Part 3 consists of a unit on Thanksgiving, with a sentence-by-sentence translation into Vietnamese. Part 4 is subdivided into sections which describe Vietnamese customs which may be helpful for American teachers to know, Vietnamese educational policy, a bibliography, and resources. An appendix contains a description of the Vietnamese New Year holiday, Tet, and a list of activities for celebrating this holiday in the school. (LP)

The Adult English as a Second Language Diagnostic Reading Test.
 Association of California School Administrators, Burlingame. Foundation for Educational Administration.
 Spons Agency—California State Dept. of Education, Sacramento.
 Pub Date—81
 Note—141p.; Contains several pages of small print. Available from—ACSA's Foundation for Educational Administration, 1575 Old Bayshore Highway, Burlingame, CA 94010 (price varies, available on request).
 Pub Type—Tests/Questionnaires (160)
EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.
Descriptors—Adult Education, Cloze Procedure, Community Colleges, *Diagnostic Tests, *En-

glish (Second Language), Postsecondary Education, *Reading Diagnosis, Reading Instruction, *Reading Tests, Test Interpretation, *Test Manuals, Two Year Colleges

The Adult English as a Second Language Diagnostic Reading Test was developed under Adult Education Demonstration Funding. It is designed for English as a Second Language students in adult education or community college programs. The purpose is to diagnose reading strengths and weaknesses for a student or groups of students as well as to provide teachers with suggestions for planning appropriate instruction. Included in the User's Manual is a Locator Test, the AESL Diagnostic Reading Test, Sample Strategy Lessons, how to administer and score the tests, and a technical section. The Locator Test is used to accurately determine which level of the AESL Diagnostic Reading Test is most appropriate for the student to take. The Locator Test is in a cloze format with 55 blanks and requires forty-five minutes to complete. The AESL Diagnostic Reading Test has a beginning and an intermediate form; each form has two passages in a maze (multiple answer cloze) format. The number of blanks per passage ranges from 96 to 128. Each passage requires one hour to complete. Diagnosis is based on the percentage of identical responses and the percentage and type of errors made on the two passages of the maze test. The four error types are: semantically appropriate, semantically inappropriate, partially acceptable, and minimal units. After tabulating the percentages of identical and error responses for an individual or group of students, the teacher will have the information needed to develop a reading "profile" for an individual or group. This profile is then used to determine which Reading Strategy Lessons will be most helpful in meeting the students' needs. (Author)

Identifiers—*Philippines

Very little research has been done on first or second language acquisition in the Philippines. Most second language learning studies cited in the literature concern acquisition of English in English-speaking communities, and most American studies of Filipino language acquisition are superficial, consisting primarily of morpheme analysis. The Philippines are an excellent laboratory for language acquisition studies because of the multilingual context. Within the country, research on the nature of Filipino language acquisition is a top priority, because 60 to 70 percent of Filipinos are non-Tagalog speakers. Also, most non-Tagalogs learn two languages simultaneously: one at home and the other (Filipino) taught in school and used in the community. Research in early childhood bilingualism in this situation would be revealing. Philippine data could also be used to study universals in second language acquisition for development of a general theory. (MSE)

Descriptors—*Computer Assisted Instruction, *Educational Policy, Elementary Secondary Edu-

cation, Literature Reviews, *Microcomputers, Policy Formation, Public Policy, Public Schools, *Second Language Instruction, State Boards of Education, *Statewide Planning

Identifiers—*Illinois
 This report provides information to guide establishment of state policy and practice on the use of microcomputers for foreign language instruction in Illinois schools. It consists of: (1) an overview of literature on the use of computer-assisted instruction (CAI) in foreign language teaching, from early efforts at instruction with mainframe computers to more recent developments in microcomputer applications, including a discussion of instructional formats and program types; (2) a brief preliminary report on efforts in selected Illinois school districts to integrate CAI and second language teaching; and (3) recommendations for specific actions by the state board of education. Systematic use of CAI was found only in large Chicago-area schools, with few foreign language teachers using the available resources. Lack of software emerged as a significant obstacle. Recommendations include provision of training for foreign language teachers in general educational computer use and field-specific applications through currently-funded programs and follow-up training, (2) amendment of certification requirements to include basic instructional computer literacy, (3) a possible required secondary school course in computer literacy, (4) district clarification of computer policy, (5) support to purchase and develop software, and (6) a statewide inventory of applicable resources. Identifiers—*Georgetown University DC

The proficiency-based German program in the School of Foreign Service at Georgetown University occupies an essential and integral but not central role in the overall foreign service program. It includes three years' instruction, in addition to the two years required for admission. Three levels are offered, and although students may take the proficiency examination at the advanced level, most choose either to study abroad or enroll in post-advanced courses first. Six categories of linguistic goals are specified (reading comprehension, listening comprehension, grammar and word order, vocabulary, pronunciation, and fluency) with five competence levels established. The foreign service content component is less specifically articulated by levels. The proficiency examination is separate from the final course examination and is recorded separately in each student's official transcript. The proficiency examination consists of a reading comprehension component and a free oral examination, and each student is evaluated by two faculty. The proficiency-based approach has increased awareness of goals and appropriate instructional materials. Students have strongly supported the approach, and both student and faculty morale and goal-orientation have been enhanced by it. Although the testing method is cumbersome and of limited application, it has served as a good reflection of faculty, students, program structure, materials, and methodology. (MSE)

Hamp-Lyons, Elizabeth
The TLE Approach to Academic Reading.
 Pub Date—[82]
 Note—26p.
 Pub Type—Reports - Descriptive (141)
EDRS Price - MF01/PC02 Plus Postage.
Descriptors—Behavioral Objectives, Classification, College Preparation, Course Organization, *English (Second Language), Higher Education, *Independent Reading, Media Selection, *Reading

Instruction, *Reading Skills, *Second Language Instruction, *Student Evaluation, Teaching Methods

A strategy for teaching reading in college preparation courses of English as a second language that attempts to help students achieve reading independence, is presented. Skills of independent, flexible reading are outlined and a taxonomy of skill types (passive, active, and synthetic) and levels (mechanical, knowledge, transfer, response, and criticism) is proposed. The skills necessary for functioning at the two highest reading skill levels (response and criticism), called "performance" levels by comparison with the three lower "competence" levels, are categorized. Methods of evaluating the student during the process of developing these skills for independent reading are considered, and both discrete point and integrative approaches are rejected as inappropriate. An evaluation model is proposed that enlarges the role of evaluation in the teaching/learning process, with the teacher continuously evaluating student achievement of specific reading performance objectives and reevaluating the necessary teaching instructions and materials. The teacher takes notes on a specially designed teaching/learning/evaluation (TLE) form after, not during, each lesson. The student is also given responsibility to monitor his own achievement of the specific objectives, and teacher and student share these evaluations by discussing them during each lesson, eliminating the need for examinations. A sample performance objective and appropriate teaching and evaluation strategies are appended. (MSE)

Met, Myriam

Immersion and the Language Minority Student.

Revised Version.

Wisconsin Univ., Milwaukee. Midwest National Origin Desegregation Assistance Center.

Pub Date—Jan 84

Note—27p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Bilingual Education, Educational Needs, *English (Second Language), *Immersion Programs, *Immigrants, Language of Instruction, *Limited English Speaking, Minority Group Children, Program Design, *Program Effectiveness, *Second Language Instruction

There are over 3 million children in the United States whose primary language is other than English. Although bilingual education has been effective in meeting their needs, its availability is limited, and the alternative is often limited or no English instruction at all. It is not yet clear how effective total immersion is for non-English speakers by comparison with immersion for English-dominant students. Differences between the groups will affect program effectiveness. Immersion programs, like bilingual programs, use teachers familiar with the students' native language and include instruction in it, and this aspect may make it as difficult to implement immersion programs as to implement bilingual programs. However, immersion as an instructional strategy can be incorporated into existing programs in which language minority students are exposed to content area instruction in English. Some effective components of programs for language minority students are complementary native language instruction, frequent positive interaction with English speakers, opportunities for comfortable native language conversation during the school day to alleviate stress and promote language pride, rewards for successful communication, limited pressure for linguistic accuracy, and consideration of group cultural and linguistic differences in program design. Process-Oriented Instruction in Composition.

Pub Date—83

Note—20p.; Based on a paper presented at the Oregon Teachers of English as a Second Language Conference (Portland, OR, 1982).

Journal Cit—ORTESOL Journal; v4 p18-36 1983

Pub Type—Guides - Classroom - Teacher (052) — Journal Articles (080) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Comparative Analysis, *English (Second Language), English Instruction, Error Patterns, Prewriting, *Process Education, Remedial Instruction, Revision (Written Composition), *Second Language Instruction, Sentence Com-

posing, *Writing (Composition), *Writing Instruction, *Writing Processes, Writing Skills

Research into process-oriented writing instruction for native speakers of English can improve instruction in writing for students of English as a second language (ESL). Process-oriented instruction focuses on the processes of writing rather than on the finished product. A comparison of writing samples of native speakers from remedial courses and ESL students shows that despite differences in the types of grammatical and syntactical errors made, significant similarities exist. The ESL writer and remedial writer both approach writing in a linear fashion with preconceived ideas, and arrive at a conclusion too soon and without sufficient illustration or detail. Prewriting exercises in internal conversation are important for ESL students to develop rhetorical skills. In addition, instruction in two major native speaker composition skills, freewriting and problem-solving, are applicable to ESL writing instruction. Freewriting is a technique for exploring and synthesizing original ideas, helping to break down inhibitions about expressing ideas by deemphasizing correctness of surface structures. The problem-solving technique approaches a writing task as a problem to be solved, considering desired outcome, intended audience, and potential problems, much like notional-functional considerations identifying content and purpose. Each technique may have specific application to cultural groups. Additional classroom practices include using real communicative situations, sentence-combining exercises, teacher writing samples, and active revision. (MSE)

Cross-Cultural Differences and the Teaching of English as a Foreign Language.

Pub Date—Aug 83

Note—8p.

Journal Cit—ORTESOL Journal; v4 p54-60 1983

Pub Type—Reports - Descriptive (141) — Journal Articles (080)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Chinese, *Cultural Differences, *Cultural Education, Curriculum Development, Dictionaries, *English (Second Language), *Language Usage, *Material Development, *Second Language Instruction, Semantics

A Chinese student of English is often faced with culturally based differences in denotation and connotation, idioms and proverbs, habits, and formulae use of language. Since the native speaker of any language has built into his language repertoire his unique cultural assumptions and values, a culture-oriented curriculum in language teaching is preferable. English lexicographers should develop a dictionary for nonnative speakers that would provide adequate cultural information for each word, such as related symbolism and customs. In addition, students' cultural exposure should be an integral part of the language curriculum, particularly in the third year. The teacher should act as a catalyst in this cultural awareness process, helping students maintain a distance from both the Chinese and English cultures. (MSE)

Descriptors—*Achievement Gains, Adult Learning, Arabic, Chinese, Comparative Analysis, *English (Second Language), Group Instruction, Immigrants, Individualized Instruction, Interference (Language), Japanese, Korean, Persian, Program Effectiveness, *Pronunciation Instruction, *Second Language Instruction

The effect of pronunciation instruction on the speech of 29 adult speakers of other languages (Japanese, Arabic, Persian, Chinese, and Korean) with previous training in English as a second language was studied. Pronunciation improvement was compared in three groups: one receiving group pronunciation training, one receiving individualized pronunciation instruction, and a third control group receiving no pronunciation training. All subjects' speech was taped before and after the eight-week pronunciation course and evaluated by five judges. Results showed no significant difference in pronun-

ciation improvement between the trained and untrained groups or between the group-trained and individually-trained students. However, the entire group showed some pronunciation improvement in the course of the study. This suggests that improvement in pronunciation occurs over time, but not necessarily as a result of formal training. (MSE)

The Use of Etymology and Phonetic Symbols (Zhuyin Fuhao) in Teaching First Year Chinese.

Pub Date—Nov 83

Note—9p.; Paper presented at the Annual Meeting of the American Council on the Teaching of Foreign Languages (San Francisco, CA, November 24-26, 1983).

Pub Type—Guides - Classroom - Teacher (052) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Chinese, *Etymology, *Graphemes, *Phonetic Transcription, Pronunciation, *Second Language Instruction, Teaching Methods, Vocabulary Development

The complex and subtle nature of Chinese requires an early understanding of the characters that extends beyond radical and phonetic identifications. Etymological explanations of character forms give students insight into the literary language, aid in character memorization and retention, and stimulate interest. Chinese presents special problems in communicating to students the standard of Chinese phonetics, but has the advantage that significantly fewer phonetic possibilities and modifications have to be mastered by comparison with Indo-European languages. Several systems for transliteration into Latin script exist, and "pinyin" most faithfully rep-

resents Chinese phonetic values. However, the phonetic symbol system used in China and Taiwan, despite its relative unfamiliarity to most Chinese language instructors, is a better device than any transliteration system for communicating standard Chinese pronunciation. The "Zhuyin Zimu" (phonetic alphabet) and "Zhuyin Fuhao" (phonetic symbols) are useful because: (1) they directly represent Chinese sounds without an alien alphabet; (2) their novelty to students avoids linguistic interference and allows greater standardization among students; (3) they are relatively simple, consisting of 37 symbols taught by groups in terms of points of articulation and followed by instruction in tones; and (4) the written transcription is accurate. Descriptors—Attitude Change, *Bilingual Education, College Students, Higher Education, *Native Language Instruction, Negative Attitudes, *Nonstandard Dialects, Puerto Ricans, *Spanish, *Standard Spoken Usage, Student Attitudes, Student Evaluation, *Writing Instruction

In an effort to bridge the gap between Spanish foreign language classes for the monolingual English speaker and the needs of the Hispanic bilingual student wishing to have Spanish instruction, a bilingual teacher trainer has designed Spanish courses specifically for the Hispanic bilingual. To give recognition to bilinguals' existing linguistic repertoire, "bilingual" approach is taken, placing value on both the students' existing language and the standard Spanish being taught. The aim is to build on students' substantial Spanish skills rather than trying to eradicate nonstandard usages. Written work is emphasized. Students are graded on progressively higher expectations, and are taught that effective communication rather than perfectionism in composition is valued. (MSE)

Identifiers—Alaska (Anchorage)

The manual offers a systematic set of procedures and relevant information to facilitate effective use of the Anchorage school district (ASD) bilingual education program (BEP). The historical background of the program's development is presented, available manuals for teaching English to limited English proficiency (LEP) students and related literature are reviewed, and steps in developing this manual are outlined. Further research is recommended, particularly in the area of test development for the skills included in the program. Improved dissemination of materials to bilingual educators is also encouraged. The ASD BEP Scope and Sequence, K-3 (a list of minimum competency skills required of LEP students in order to mainstream them into the regular classroom) is appended, along with procedures for using the list, selected teaching strategies, activities, materials, and bibliographies. Identifiers—Sunny Side School District AZ

The academic achievement of 144 second, third, and fourth graders in two Tucson elementary school bilingual education programs was measured by pre- and post-test scores on the California Achievement Test (CAT) and California Test of Basic Skills-Spanish (CTBS) in the fall and spring of the 1982-83 school year. The study was undertaken to examine whether or not the students gained in achievement during the school year, how students changing from Spanish to English reading and math instruction compared with those initially placed in English instruction, and how gains compared on the two tests. Significant differences were found between fall and spring scores on the CAT reading and math tests in each grade, and in the CTBS in second and third grades. Fourth-grade students receiving instruction in Spanish reading and math showed no gains on the CTBS. However, students changing from Spanish to English instruction in the third grade performed significantly better on the CAT math test. No significant differences were found for fourth grade students changing from Spanish to English. Further research with greater controls was recommended. (MSE)

Identifiers—*Kenya

Despite considerable linguistic diversity in Kenya, the country is increasingly trilingual, with individual Kenyans tending toward varying degrees of proficiency in the vernacular, Swahili, and English. The vernacular is acquired at home and in the neighborhood with co-ethnics in both rural and urban contexts. Swahili is typically learned informally

from other nonnative speakers who speak a wide range of varieties of it, but there is a trend toward more formal instruction in school. English is learned within the school system, with English proposed in official policy as the medium of instruction from the fourth year of the system upward. English is used as the standard language of government and business communication. In Africa as a whole there is a tendency among African writers to write in their own languages at the cost of reducing their potential audiences. This tendency will increase vernacular prestige and increase competition with Swahili and English. With increasing literacy in Kenya and heightened pan-African awareness, it is not unlikely that this movement will take a stronger hold there, resulting in enhanced vernacular literacy. (MSE)

Parla, JoAnn Chambers, Jenifer
Teaching the "Se" Constructions in Spanish: A Communicative Approach.

Pub Date—[82]
Note—33p.; Revised version of paper presented at the Conference of the Indiana University of Pennsylvania and Niagara Linguistics Society.

Pub Type—Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Classification, *Classroom Techniques, *Communicative Competence (Languages), *Form Classes (Languages), *Grammar, Material Development, Second Language Instruction, *Spanish, Teaching Methods

An approach to teaching the paradigmatic and reciprocal uses of the "se" construction in Spanish is presented. A system of eight basic categories of the paradigmatic reflexives is outlined, including "do-it-yourself," reciprocal, reflexive of change, consumer, reflexive of interest, optional, change of meaning, and reflexive-only classifications. Textbook treatments of the constructions are reviewed, and the common limitations found include partial explanations, misleading information such as the use of incomplete English translations, erroneous information, and drills that do not help the teacher recognize student problems. The proposed approach focuses on the order of presentation of the categories of uses and on the nature of the drills and practice items. The categories are grouped for presentation in this order: reflexive of change, preferably presented separately for animate and inanimate subjects; change of meaning; reflexive-only and optional; reflexive of interest and consumer; and "do-it-yourself" and reciprocal. Practice exercises requiring creative responses, including guided questions, guided dialogues, and transformation exercises are recommended and some samples are appended. (MSE)

The Question of Effectiveness: A Blueprint for Examining the Effects of the Federal Bilingual Education Program.

National Council of La Raza, Washington, D.C. Pub Date—Sep 82

Note—16p.; In Its: Perspectives Publicas/Backgrounders, Number 23 Sep 1982

Pub Type—Reports - Evaluative (142)
EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Bilingual Education Programs, Educational History, Educational Objectives, *Evaluation Criteria, Federal Legislation, *Federal Programs, Outcomes of Education, *Program Effectiveness, *Program Evaluation

Identifiers—*Elementary Secondary Education Act Title VII

Significant attention has been given to the effectiveness of the federal bilingual education program, Title VII of the Elementary and Secondary Education Act of 1975, although evaluations have often focused on philosophical issues rather than educational outcomes. Measures of program effectiveness have often been inappropriate for the goals, complexities, and limitations of the legislation. Some evaluations have been too narrow in focus, and others have been too broad for the program's resources and design. Studies of bilingual education program effectiveness must reflect the historical situation the program was designed to address, the limitations in structure of Title VII, and the variety of goals and measures of effectiveness for both students and institutions. These include: achievement in English and other academic skills; increased student persistence, attendance, and academic aspiration; enhanced parent involvement; improved program availability, efficiency, and support; and better test-

ing. (MSE)

Identifiers—*Pennsylvania (Pittsburgh)
The evolution and activities of the Allegheny Foreign Language Association (AFLA) are described in the context of the organization of foreign language education in the area and the attitudes of the professionals involved. Foreign language instruction in Allegheny County includes: Pittsburgh public school programs, including elementary magnet bilingual education programs in French, Spanish, and German; the University of Pittsburgh; two other universities; four private colleges; several private secondary schools noted for their foreign language programs; suburban secondary schools; and an extensive parochial school system. Despite efforts at communication in the foreign language community, little contact occurred, and wariness and resentment between elementary/secondary and higher education persisted. Although the University of Pittsburgh sponsored some significant professional activities, it also abolished the foreign language graduation requirement, causing more problems. AFLA began meeting in the summer of 1983, and some significant changes in attitude may have begun. The university has implemented both entrance and graduation requirements in foreign languages, and projects have been discussed such as establishing a resource center and inservice teacher education programs. It is suggested that much work is still necessary, but greater potential for interprofessional cooperation now exists. (MSE)

Identifiers—*Boston College MA

The development and coordination of interdisciplinary immersion programs in French and Spanish at Boston College are chronicled, and some issues of federal grant support are discussed. The programs, currently involving the history, theology, philosophy, fine arts, management, and sociology departments and soon including political science, consist of one course taught in each department in each language. Most are standard courses ordinarily taught in English. Students are also encouraged to take a coordinating course in the appropriate language. Extracurricular activities play a large role in both programs. Among the issues addressed during the program's course were the possible admission of Latin Americans to the Spanish program and more closely defining the function of the coordinating course. Additional projects planned include training

other college and high school personnel to run similar courses, and opening undergraduate immersion courses to secondary language teachers for graduate credit. Funding by the Department of Education and National Endowment for the Humanities has had advantages and disadvantages. Among the advantages are adequate funds for support activities such as consultants, travel, materials, publicity, and departmental coordination, and the prestige of association. Disadvantages include walking the line between proposal specifications and actual practice, and the possible negative impact of losing funding. (MSE)

Descriptors—College Students, Color, Comparative Analysis, *Expressive Language, Intonation, Language Patterns, *Language Styles, *Pictorial Stimuli, Self Esteem, *Sex Differences, *Visual Perception

In a study of the differences in male and female descriptions of nine photographs, picture type was found to be an important variable. Twelve male and 8 female college students were asked to describe each of the photographs. Picture type was rated as high in interest to males, high in interest to females, or high in interest to both. Responses were scored for five categories of language use: word production (number of words, self-references, and color references); weakeners (self-deprecation, qualifiers such as "kind of" or "looks like"); fillers ("um," "er," "okay"); paralinguistic features (question inflection, laughter); and queries or comments to the experimenter (task-related or task-irrelevant). Picture type was found to affect length of description (shortest for female-interest pictures), color references (most for female-interest), and question intonation (most common for male-interest). The use of self-reference and self-deprecation were both associated with question intonation and laughter. Results suggest that while topic affects speech style, gender does not. (MSE)

The Educational Status of Hispanic American Children.

National Council of La Raza, Washington, D.C. Pub Date—Mar 82

Note—27p.

Pub Type—Reports - Descriptive (141) — Numerical/Quantitative Data (110)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Age, *Children, Educational Status Comparison, Elementary Secondary Education, English (Second Language), *Enrollment Rate, High School Graduates, *Hispanic Americans, *Illiteracy, Information Needs, Institutional Characteristics, *Language Proficiency, Limited English Speaking, National Surveys, Private Schools, Public Schools, *Student Educational Objectives

An overview of the educational and language status of Hispanic American children is presented using data from a variety of sources. The following topics are reported on: (1) enrollment in private and public schools and by age category; (2) delayed education (enrollment two years or more below expected grade level) by language characteristics and ethnic subgroup; (3) high school completion for Hispanics versus non-Hispanics; (4) high school dropouts in metropolitan and nonmetropolitan areas, compared with whites; (5) high school noncompletion, by language background; (6) functional illiteracy, in metropolitan and non-metropolitan areas and by ethnic subgroup; (7) occupational aspiration by comparison with whites and blacks; (8) parental, counselor, and student expectations for postsecondary education, by comparison with whites and blacks and by ethnic subgroup; (9) type of postsecondary education sought; and (10) language characteristics of the population, including numbers of language minority persons, limited English proficient children, and services available to limited English proficient children. Problems in data collection on language characteristics are outlined. (MSE)

Descriptors—Bilingual Education Programs, *Educational Policy, Elementary Secondary Education, Financial Support, Government Role, Language Attitudes, Literature Reviews, National Surveys, *Private Schools, Program Descriptions, *Second Language Instruction, *Teaching Methods

A study of bilingual education programs and policies in private and parochial schools in the United States was undertaken to determine whether these schools were using their potential for development of instructional techniques. Bilingual education programs were broadly defined to include transitional, maintenance, or other programs in English and/or native languages for children of minority language backgrounds not proficient in English. Also included were non-English language programs for children who may or may not be proficient in English. The process included (1) a review of the literature, convening of an advisory committee, and preparation of a descriptive brochure; (2) a search for programs, including nominations from organizations, idea sessions with nonpublic school educators, and followup monitoring; and (3) site visits to the programs. This process is outlined and findings are presented in the form of site visit profiles, general findings, and specific conclusions. Policy issues discussed include language values, conditions for developing new instructional practices, private schools as a governmental category, private values and public aid, negativism about bilingual education, and integration in private schools. It is concluded that although language training in these schools may reflect the state of the art, it is not influencing important breakthroughs in techniques or methods. The private schools studied appear to attract students as much for the values associated with private schools as for the benefits of the language programs. (MSE)

Descriptors—Bilingualism, Comprehension, Context Clues, Elementary Education, English, Interlanguage, *Language Processing, Language Proficiency, *Learning Processes, *Literacy, *Second Language Learning, Spanish, *Transfer of Training

A two-year study is reported of the transfer of two literacy skills, narrative comprehension and learning from text, from elementary school children's first language (Spanish) to their second (English). For each skill, the primary research question was the degree to which the students' first language (L1) performance was predictive of their second language (L2) performance. Subjects were from bilingual education programs in two southern California school districts, in kindergarten through sixth grade. Comparison groups of monolingual English-speaking students were used. Students answered comprehension questions about modified versions of Aesop's fables. General results indicate that for both skills, use of previously acquired knowledge is about the same for L1 and L2. This is limited only by the child's code breaking skills for L2, in listening comprehension for younger subjects, and in reading comprehension for older children. Once the basic parsing skills are acquired, the higher order comprehension processes are similar, whether material is presented in L1 or L2. Comparisons with monolingual English-speaking students indicate no negative effect of dealing with both Spanish and English in school. There was some indication that bilingual students with training in Spanish as a second language were slightly more proficient in English than their monolingual counterparts. In addition, English performance of the students of English as a second language equaled that of their monolingual counterparts by the fourth grade, and L1 performance of the two groups was equivalent at all levels. Pedagogical implications are discussed. (MSE)

The instructional guide to business Chinese consists of 12 two-part specially composed narrative essays on all aspects of Chinese foreign trade ranging from broad principles and policies to details of operation and procedure. Each lesson is followed by a summary of its main points, 10 questions to guide discussion or conversational practice, and a list of new terms and grammatical forms with pinyin romanization and English equivalents provided for the Chinese characters. A separate section is appended containing an alphabetically arranged composite glossary. The text is intended for students of Chinese affairs and foreign trade with at least two years of Chinese language training. Each lesson is planned for three contact hours. Materials were developed from a systematic analysis of content and word frequency in relevant Chinese language and foreign trade materials appearing since the Cultural Revolution. (MSE)

Identifiers—*American Institute of Musical Studies, *Foreign Service Institute Interview

An adaptation of the Foreign Service Institute's (FSI) oral interview test for oral language proficiency developed for use at the American Institute of Musical Studies' (AIMS) summer vocal instruction in Austria to determine students' improvement in German language is discussed. The reasons for its selection over other major comparable tests are outlined. The FSI weighting system and five categories of proficiency are retained in the AIMS version. However, the point system of the pronunciation category is reversed to avoid penalizing candidates for good pronunciation, and the rating scale is abbreviated because of the limited proficiency needs of the AIMS students. Each student is tested before and after the German language course by two testers other than his own teachers. Over 1,000 students have been tested thus far. The average improvement in functional conversational language during the course includes a seven point increase in levels I and II, a six point increase in levels III and IV, and a five point increase in level V. This adaptation is suggested to be a suitable alternative to the American Council on the Teaching of Foreign Languages and Educational Testing Service oral proficiency test in special circumstances such as these. Descriptors—*Bilingual Students, Communication Skills, *Cultural Context, English (Second Language), Ethnography, *Literacy Education, Relevance (Education), Secondary Education, Second Language Instruction, Spanish, Student Attitudes, Student Needs, *Writing Instruction, *Writing Skills

A study of language and literacy activities and attitudes in a southern California bilingual community and the resulting development of more culturally relevant writing instruction for junior and senior high school students of that community is reported. The initial task was an ethnographic survey of the community, focusing on its language activities and values. Four families were studied and compared, and the parents' perspectives examined.

Based on these findings, appropriate writing activities were developed for this group and formulated into instructional modules, for which seminars were held to familiarize teachers with the materials and techniques. Modules were designed with content and activities relevant to students' everyday concerns and communication needs. The writing modules were then used in 3 junior high schools with 293 students. Evaluations of over 1,000 pre- and post-course writing samples showed a significant achievement gain during the period of the study. It is suggested that the potential role of ethnography in instructional reform is great, providing a key to instructional, motivational, and sociocultural congruence in the classroom for both teachers and students. Theoretical insights into teaching English as a second language developed in recent years are brought together in a broad methodological approach called the balanced activities approach. The book aims at

providing a theoretical background to the approach as well as detailing practical instructional techniques. The first of the three parts of the book, on theory, outlines the concerns of applied linguistics that have influenced English teaching, including (1) language learning motivation and success factors; (2) the knowledge and skills of a native speaker; (3) the content and varieties of language instruction; and (4) the connections between language learning and language teaching. The second part, on practice, focuses on specific techniques and materials for use within the general methodological approach outlined in the first part: (1) teaching and integrating productive language skills; (2) the what, how, and when of introducing new language in the classroom; (3) oral and written practice; (4) oral and written communicative activities and their evaluation; and (5) principles of teaching receptive skills. The third part, management and planning, presents an approach to classroom procedure that brings together the concerns of the first two parts and considers class management (teacher role, student groupings, and discipline) and planning (class, syllabus, and instructional materials). A section on evaluating instructional materials is appended. (MSE)

Document Not Available from EDRS.

Descriptors—Check Lists, Class Activities, *Classroom Techniques, *Dialogs (Language), Difficulty Level, Group Activities, Interviews, *Role Playing, *Second Language Instruction, *Second Language Learning, Student Attitudes, Student Interests, Student Needs, Teacher Attitudes, Teacher Role

A guide to the use of role playing in the foreign language classroom outlines in general terms what role play is, provides examples, analyzes its uses, and gives practical assistance in planning activities. The following topics are examined: aspects of role behavior (formality, register, function, attitude, para-linguistic and extra-linguistic features, acceptability and appropriateness, and the immediacy of oral interaction), roles in the classroom, and activities often confused with role play. Two sample role plays, one for beginning students and one for advanced, are described and analyzed in terms of

teacher and class preparation and follow-up. Advantages of role play (including maximizing student activity, relevance, interest, discipline, and mixing of ability groups), disadvantages (including organization and time constraints), and further points for consideration (teacher role, teacher and student attitudes, and mistakes) are outlined and discussed. A role play checklist for activity selection, preparation, action, and followup is included, and guidelines are given for long-term preparation, including formal oral practice, dialogue work, conversational techniques, group work, miming and drama, and listening comprehension. Suggestions for developing role plays focus on interviews, role plays on one theme, and using existing materials. Simple role plays for beginner, intermediate, and advanced levels are appended. Sirles, Craig
Reassessing Diglossia for Language Planning.
Pub Date—28 Dec 83

Note—15p.; Paper presented at the Annual Meeting of the American Association for Applied Linguistics (Minneapolis, MN, December 27-29, 1983).

Pub Type—Reports - Evaluative (142) — Opinion Papers (120) — Speeches/Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Code Switching (Language), Diachronic Linguistics, *Diglossia, *Language Planning, *Language Usage, *Language Variation, *Linguistic Theory, Sociolinguistics

The theory of diglossia developed by Charles Ferguson in 1959, and a later, expanded version by Joshua Fishman are outlined and contrasted, and some of the major objections to them are discussed. Diglossia delineates communities using two or more linguistic varieties for differing functions within a single speech community. Ferguson's theory excluded bilingual communities, and Fishman's theory included them in certain specific conditions of language use. Fishman's contribution to the understanding of code-switching is noted, and the two theories' implications and usefulness for language planning are examined, with attention given to the potential of each for predicting attitudes toward language change. Recent language use and change patterns in the four communities illustrating Ferguson's 1959 theory (Greece, Haiti, Swiss German cantons of Switzerland, and the Arab-speaking world) are discussed in the context of the original theory and language planning. Descriptors—*College Second Language Programs, *Curriculum Development, Educational Quality, *Elective Courses, *Enrollment Influences, Enrollment Trends, French, German, Higher Education, *Language Enrollment, Prerequisites, Program Descriptions, *Program Design, Program Effectiveness, Spanish, Student Interests, Tutoring, Two Year Colleges

Identifiers—*Tarrant County Junior College TX

The Northeast Campus of Tarrant County Junior College (TX) experienced a foreign language enrollment increase of 196% between 1973 and 1983, compared to a college-wide enrollment increase of only 91%. The program's success is due largely to the number and variety of curricular offerings. In addition to a 6-course sequence of 3- and 4-hour courses in French, Spanish, and German, a variety of 1-hour courses at 5 levels of difficulty have been introduced to meet students' curricular needs and preferences. These include such courses as "Paris for Travelers," "History of Nazi Germany," "Spain after Franco," "French Cooking," "Personal Correspondence in French," "German for Travelers," "Barrio Spanish," literature courses, grammar, listening and reading comprehension, composition, and linguistics. Some have traditional scheduled meetings, and others are supervised by a tutor in the language laboratory. Prerequisites vary from none to a bachelors degree. Students may select any num-

ber and combination of the courses as elective hours to supplement language study, gaining more control over their programs, correcting weaknesses, and adding emphasis in areas of special interest. (MSE)

Success Guaranteed: Precision Teaching in the Foreign Language Classroom.
Pub Date—Mar 84

Note—25p.; Paper presented at the Annual Meeting of the Southwest Conference on the Teaching of Foreign Languages (Colorado Springs, CO, March 1-3, 1984).

Pub Type—Reports - Descriptive (141) — Speeches/Meeting Papers (150)
EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Classroom Techniques, Efficiency, English (Second Language), Evaluation Criteria, Experience Charts, *Individualized Instruction, *Measurement Techniques, Pattern Drills (Language), *Precision Teaching, Secondary Education, *Second Language Instruction, Skill Development, Teaching Methods, *Time Factors (Learning)

Precision teaching is a useful tool for individualizing instruction on a wide variety of foreign language skills. In 5 to 10 minutes per day, students can systematically practice specific skills in need of improvement. The technique has four major components: (1) a precise means of measuring performance continuously, (2) detailed records on behavior charts, (3) a formula for interpreting the charted data, and (4) guidelines for making instructional decisions based on those interpretations. Precision teaching charts record daily student performance gains, and provide visual motivation for students, information for instructional decisions, and understandable communication with students, teachers, and parents. The use of precision teaching builds fluency in the target language and has been shown through research to have positive effects on student achievement. Precision teaching is adaptable to many skills and levels specifically found in the foreign language classroom. The cost in time and expense of the technique is small compared to the potential benefits for students and teachers. (MSE)

Descriptors—Form Classes (Languages), *German, *Language Patterns, Morphology (Languages), *Nouns, *Phrase Structure, *Second Language Instruction, *Semantics

A simplified pattern of noun formation is outlined that can assist the German teacher in helping students understand constituent relationships in long or obscure German nouns, providing an overview of significant patterns that covers a relatively complete noun system. First, significant patterns in nouns outside the process of formation, and changes over time, are briefly noted. Various processes of noun formation are then distinguished, including conversion, combination (prefixes and suffixes), compounding (determinative, coordinative, and idiomatic), variation in linking elements, agglutination, shortened forms (clipped, acronyms, and abbreviations), and special formations, often because of specific linguistic phenomena. Teacher Relationship
Identifiers—*Dialogue Journals, *Language Functions

The lack of authentic, real-world interaction practice in the English as a second language (ESL) classroom is described and discussed, and the ways in which dialogue journals answer this classroom need are detailed. A dialogue journal is an interactive, self-generated, cumulative and functional writing and reading exchange between teacher and student. The results are reported of a pilot study of the functional nature of the language in dialogue journals of adult Japanese as ESL students. The study used a system of language function analysis developed by Roger Shuy (1982). A definition of written fluency is offered and the relationship of language functions to written fluency is discussed. Methodological considerations and research suggestions are proposed. Descriptors—Class Activities, Cultural Education, Culture Contact, Learning Motivation, *Pattern Drills (Language), Phonetics, Recreational Activities, *Second Language Instruction, *Singing, Spanish, Speech Communication, *Student Interests, Student Participation, Syntax

Music awakens interest during language learning, and use of song can stimulate students to greater oral participation. Songs are universally enjoyed, break the day's monotony, and make repetition enjoyable. They also allow linguistic exercise in a non-competitive situation and offer a more authentic linguistic experience than most classroom activities. Although beginning students respond to songs with enthusiasm, intermediate students benefit most because they know basic grammar but are often timid about oral participation. To create strong interest among students, complete analysis of the lyrics must be done and students must be given some background about the song and/or songwriter, with a list of vocabulary words. The use of song is an excellent way to practice Spanish phonetics, and songs can be found using the most troublesome sounds. Repetitive songs using all vowels are good for beginners, while those with more refined syntactic and grammatical structure develop linguistic and cultural sensitivity among more advanced students. A gradual rather than intensive exposure is most effective, introducing a new song about every two weeks. On the first day, students try to decipher the song's meaning. On the second day the lyrics and questions dealing with vocabulary, grammar, and meaning are distributed and discussed before hearing the song once more. Students sing together on the third day, and memorize it by the fourth. The greatest advantage of using song is that it creates a positive feeling for language learning. (MSE)

Descriptors—Adolescents, Context Clues, Cultural Awareness, Difficulty Level, *English (Second Language), *Fiction, *Independent Reading, Literature Appreciation, Media Selection, Reading Comprehension, Reading Improvement, *Reading Instruction, Reading Rate, *Reading Skills, *Recreational Reading, Secondary Education, Second Language Learning, Student Motivation, Vocabulary Development

Intermediate level students of English as a second language reach a critical stage in their language learning after which motivation wanes if no specific attainable goals are offered as encouragement to progress. The ability to enjoy recreational reading

can provide those goals, but students must make the transition from dependence on the teacher for reading support to independent reading. The rewards of independent recreational reading include entertainment, greater linguistic competence, increasing confidence in approaching written discourse, and heightened cultural awareness. What is needed is a course in independent reading of fiction. Course units should cover: developing awareness of approaches to the text, creating expectations about a work of fiction, predicting the organization of the text, dealing with unfamiliar lexical items, increasing reading speed, recognizing cohesive links, understanding language in context, understanding a story and responding to it, and selecting the appropriate book to read. Identifiers—Mexico

A study of the effectiveness of a language proficiency testing method using partial dictation is reported. The study used 60 undergraduate students at a Mexican university studying English as a second language under a traditional four-skills approach. The partial dictation exam was a combination of dictation and cloze procedure. The entire text is presented in an auditory version, and the printed version presented to students is only partial, with portions to be filled in by students. The decoding and encoding process tested was felt to both give students a feeling of achievement and test their global language proficiency. Grades on the partial dictation exam, final grades, and averages for diagnostic exams were compared statistically, and the method was found to be reliable enough to allow discontinuation of the more unwieldy and costly oral examination. Appendices include examiner instructions, two printed portions of the examination, and items from the diagnostic exams used. (MSE)

A survey of 25 international students studying in Massachusetts colleges gathered information on 4 specific aspects of their American college experience (recruitment, orientation, adaptation, and acculturation) as well as about their experiences with English. In interviews, nine students said they had had no problems with the English language; four of these, native speakers of English or having had considerable English experience, later showed they did have some difficulty with American accents. Among the most common problems found were in aural comprehension, slang and colloquialisms, speed of others' speech, producing speech, understanding jokes, and speaking with people students felt were hostile. Students felt that in order to learn English better they needed to stay away from their fellow countrymen and converse with native English speakers. Other aids student found to be helpful were television, conversation, dictionaries, and writing. Students felt that the greater their own de-

sire to learn was, the greater their success would be. (MSE)

Developmental Patterns of Past-Tense Acquisition among Foreign Language Learners of French.

Pub Date—Dec 83

Note—12p.; Paper presented at the Annual Meeting of the Modern Language Association (100th, New York, NY, December 27-30, 1983).

Pub Type—Reports - Research (143) - Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Adult Learning, Classroom Techniques, Curriculum Design, *Error Patterns, *French, *Second Language Learning, Skill Development, *Tenses (Grammar), *Verbs

The patterns of acquisition of the *passé composé* and imperfect tenses in French among 16 adult beginning and intermediate students were studied. Based on 15-minute speech samples in which both verb tenses were elicited by seeded questions and cues for descriptive and narrative monologues, the intermediate learners had greater success with the *passé composé* than with the imperfect. While they were better able to produce accurate forms of the imperfect, they had greater success with the distribution of *passé composé*. In addition, the salient feature of all past tense errors was the almost systematic use of the present tense in an imperfect environment, evidence that learners may be more aware of the functional attributes of the *passé composé* than of the imperfect. This suggests that morphological and semantic complexity alone cannot account for this error pattern. Despite classroom drill and analysis, learners may be disposed to avoiding certain tenses. This implies, for curriculum development, the need for the production of tasks eliciting the imperfect, both in isolation and in narrative contexts, resulting in overall increased proficiency with the past tenses. Identifiers—University of Alberta (Canada)

Despite a common attitude that it is very difficult, and possibly unwise, to try to teach Mandarin Chinese to speakers of other dialects, there is a social and academic need for this kind of course, and it is possible to teach it successfully to most students. In the University of Alberta's program the likely candidates are the large group of foreign students from Hong Kong and Malaysia. The difficulties faced by the instructor in this program included: initial screening to get a homogeneous and motivated group; resources adequate for the course; bringing students to the same level; attitudes of cultural inferiority among some students; limited instructor language ability; and resistance to using pin-yin. Student problems included: unique linguistic problems because of complex dialects; lack of initial motivation; assumptions that the course would be easy; common linguistic problems such as tone distinction; and maintaining interest after the course. Such a course requires thorough teaching of the sound mechanism, phonological system, and syntactic differences. In addition, it requires that the instructor add interest, patience, and confidence for good results. (MSE)

Descriptors—Adult Learning, Arabic, *English (Second Language), *Error Patterns, Form Classes (Languages), Higher Education, Japanese, *Second Language Learning, Spanish, *Tenses (Grammar), *Time Factors (Learning)

A study of the acquisition of the auxiliary (*tense*, modal, perfect, and progressive) by 36 adult learners of English as a second language at three levels whose first languages were Arabic, Japanese, and Spanish is reported. The students were given three tests, on oral production, written production, and written reception. Nineteen verb structures were tested. Results showed that the more advanced the student's English level, the better his or her performance in the study. Productive tasks were not performed as well as receptive tasks. Little difference in performance was found between real and non-sense verbs. The overall correct response rate for tense was 71%, slightly higher for past than present tenses. The rate was 57% for verbs following modal, 59% for perfect, and 56% for progressive. The Spanish speakers gave the fewest correct responses, the Arabic speakers the next most, and Japanese speakers the most, corresponding to the students' earlier performance on English placement tests. Further research is recommended with child subjects, more natural language samples, and a larger number of structures tested. (MSE)

EDRS Price - MF01/PC06 Plus Postage.

Descriptors—Adult Education, *Communication Skills, Cultural Context, *English (Second Language), Instructional Materials, *Language Usage, *Listening Comprehension, Material Development, *Second Language Instruction, Videotape Recordings

The background, research, development, and recommended use of a set of instructional materials for teaching listening comprehension to adult learners of English as a second language are outlined in detail. The materials were developed in response to a need for real-life language samples for use in teaching listening comprehension of English. A series of videotaped episodes with native speakers engaged in nonacademic language use situations formed the basis for accompanying written materials. The review of research, pedagogy, and materials discusses previous work concerning listening and reading, the listening act, pedagogical implications, and existing materials. The outline of procedures and methods chronicles the making, classroom implementation, and evaluation of the materials' success. A separate section on the materials' evaluation includes summaries of teachers' responses to general and yes/no evaluations, a sample episode evaluation, and the researcher's own evaluation. Implications for future research are examined. Appendices include the texts of the written materials, a chart summarizing existing materials, a situation checklist, a list of alternate expressions and sample student homework, and the evaluation forms used. The Morpheme "Kom": A First Analysis and Look at Embedding in Hmong.

Pub Date—[82]

Note—17p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Linguistic Theory, *Morphology (Languages), Native Speakers, *Semantics, *Sentence Structure, *Sino Tibetan Languages, Structural Analysis (Linguistics), *Syntax, *Verbs

Identifiers—*Hmong (Language)

A syntactic and semantic analysis of the morpheme "kom" in the Hmong language and its place in sentence embedding is presented. Sample sentences of other researchers were compared with information found in folk tales and the resultant hypotheses were tested on native informants. The morpheme has been previously described as mean-

ing the conjunction "in order that," the verb "cause," and the verbs "make" and "want" followed by a subordinate clause. Here it is shown to also function as a higher verb meaning "tell," or "order someone to do something," as a complementizer introducing an embedded sentence, and as an idiomatic phrase when followed by the "can/able to" particle "tau." Each of these functions is analyzed using the Standard Theory as framework. (MSE)

Identifiers—*English Technical Language School PR

An evaluation of the effectiveness of the English language training for Navy recruits at the English Technical Language School (ETLS) in Puerto Rico is reported. The study covers the period of December 7, 1981, to September 30, 1983. It tracked Puerto Rican Army National Guard (PRANG) personnel from completion of English language training through initial military training and fleet assignment. The report's contents include background information; descriptions of the ETLS and Navy recruit training programs; training evaluation data, including language proficiency examinations, recruit data, length of training, developmental training, and the company commander/instructor commentary; analysis of existing and alternative program costs; and conclusions and recommendations. The ETLS program's effectiveness was found to exceed the short-term Hispanic recruiting goals, and a long-term and positive impact was found even in the negative political climate of the location. Recommendations include program admission limitations, upgrading of facilities, criteria for personnel assignment, continued monitoring of English language trained personnel, and periodic economic analysis. Appendices include a memorandum of understanding between PRANG and the Navy, personnel and recruit data, standard operating procedures used at ETLS, the program of instruction, mission and curriculum outline, tracking system information, and summaries of commander interviews. Identifiers—*Dialogue Journals

Dialogue journals are notebooks in which students write to their teacher, in English, about whatever they choose, to which the teacher responds without correcting any errors. The objective is a written conversation. One Los Angeles sixth grade teacher used the technique with a linguistically diverse class consisting of 27 students from 12 countries and 10 different language backgrounds, of whom only 2 were native English speakers using English at home. The dialogue journals students wrote were used for daily student-teacher conversations, and have become the core of the teacher's teaching, increasing individual student contact and providing spontaneous interaction using the dialogue journal has advantages for both students and

teachers. Advantages to students include the opportunity for real communication and, consequently, language acquisition. Learning grows directly from students' individual interests and concerns. Advantages to the teacher include the opportunity to assess each student's language competence immediately and build from that point instead of starting at some predetermined level of instruction. Also, the teacher has the opportunity to learn a great deal about each student's language, culture, and customs. (MSE)

Descriptors—Adult Students, College Students, *Diaries, *English (Second Language), Higher Education, Interpersonal Communication, *Second Language Instruction, Student Characteristics, Student Interests, *Student Teacher Relationship, Teaching Methods

Identifiers—*Dialogue Journals

A topical analysis of the dialogue journals written by seven of one university faculty member's students of English as a foreign language (EFL) is presented. Examination of the first ten entries in the journals revealed five general topic categories: academic, personal, cultural, interpersonal, and general interest. The ten samples are provided. It is concluded that no clear pattern of topic exists in the samples, probably because the journals are a personal, individual activity that students use to meet individual needs. One fact noted was that the students with the highest percentage of personal topics were not only Latin Americans but also the only graduate students of the sample. Further research in the measurable benefits of the use of dialogue journals is recommended. A chart of topic frequency is appended. (MSE)

Descriptors—Case Studies, College Students, *English (Second Language), *Grammar, Higher Education, Interviews, Korean, Language Proficiency, *Language Usage, *Learning Theories, *Second Language Learning, *Verbs, Writing (Composition)

Identifiers—*Monitor Model

The use of prepositions, past tense verb forms, and subject-verb agreement in the English of a Korean college student of English for foreign students is analyzed in the context of Krashen's Monitor Model theory of language acquisition. The student was interviewed, asked to give a free writing sample, asked to read his own writing, and asked to rewrite his composition. It was predicted that because subject-verb agreement and regular past tense have "learnable" rules, the student would use his language "monitor" and increase his accuracy of usage of these forms. It was also hypothesized that, because the rules for prepositions are not learnable, he would attempt to monitor but would decrease his accuracy of usage of this complex form without knowledge of the rules. Results suggest that, in keeping with the Krashen model, the student did use his monitor with grammar points that have learnable rules and was not able to use it in the case of unlearnable rules. The Purpose and Functions of Faculty Evaluation.
IHE Newsletter.

Georgia Univ., Athens. Inst. of Higher Education.
Pub Date—Jun 83

Note—8p.; Revision of a paper presented at the Meeting of the Evaluation of Teaching Effectiveness (Athens, GA, September 8-9, 1982).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—College Faculty, Employment Practices, *Faculty Evaluation, Higher Education, *Instructional Improvement, Personnel Policy, Student Evaluation of Teacher Performance, Teacher Administrator Relationship, *Teaching Skills

Basic questions concerning the purposes and functions of faculty evaluation in higher education are considered, along with background of the practice. It is contended that the purpose of faculty evaluation ought to be the improvement of instruction, and that the administrative uses of faculty evaluation for decisions of promotion, tenure, and salary increases should be secondary. Additional suggestions are as follows: faculty evaluation should focus on the teaching performance and not on the faculty member's scholarly reputation or productivity; faculty evaluation should be the responsibility of those administratively responsible for faculty performance; evaluation by students and colleagues has severe limitations if evaluation is to serve the improvement of instruction; evaluations should be conducted in a systematic, objective, valid, and fair manner; the results of faculty evaluation should be specified in advance and be acceptable to the faculty being evaluated; faculty evaluation must be tied to the institution's incentive-and-reward system; and evaluation should be supported by means of faculty development in the form of instructional resources that facilitate classroom instruction. Ethical and legal implications of faculty evaluation are also considered. (SW)

Managing Higher Education in the 80s: Trying to Do More with Less. Touche Ross Roundtable.

Touche Ross & Co., New York, NY.

Pub Date—83

Note—42p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Administrators, *College Administration, *Declining Enrollment, Federal Aid, *Financial Problems, *Governance, Higher Education, *Leadership Responsibility, *Productivity, Retrenchment, Teacher Role, Technological Advancement, Tuition

Issues concerning the management of colleges and universities are considered in a roundtable discussion. It is suggested that higher education may be at a decisive juncture with respect to demographics, finances, institutional structure, and the political context. Attention is directed to the decline in the number of 18- to 22-year-olds and the projected increase in foreign student enrollment. In considering the financial setting of higher education, the level of tuition charges at public and private colleges and the problem of reduced federal aid are addressed. Additional topics include: the role of faculty in the governance of colleges; the leadership roles of the trustees, president, deans, and faculty; and the potential for new technologies to increase productivity in higher education. The following individuals participated in the roundtable discussion: Benjamin H. Alexander, John Brademas, Edward B. Fiske, Ellen V. Futter, Harry G. Judge, Martin Meyerson, Jack W. Peltason, Irving Redel, and James E. Seitz. (SW)

Descriptors—Clinical Experience, College Pro-

grams, *Comparative Education, Educational Testing, *Foreign Countries, *Graduate Medical Education, Higher Education, Intellectual Disciplines, *Medicine, Premedical Students, *Specialization, Student Evaluation

Identifiers—*Europe

Statistics about postgraduate training requirements in the main medical specialties in 26 European countries belonging to the World Health Organization are presented. It is noted that conventions vary widely from country to country concerning the designation of main specialties and subspecialties. These variations are apparent from the lengths of time given for training in some subjects. For each country, information is presented on undergraduate training, internships, specialist training, and assessment. For each specialty, information is provided on the number of years required for training, the inclusion of an internship, and type of examination. The tables enable comparison of specialties within and among countries. A brief narrative introduction reports the following trends: increasing specialization and subspecialization, a comprehensive review of the system of specialist training in seven countries, and formal postgraduate training in general practice/family medicine/general medicine in 18 countries. One reason for these trends and changes is the graduate shift in emphasis from high cost, high technology medicine toward primary care and prevention. Additional reasons are the need for cost containment and the desire to achieve international comparability of standards. (SW)

Regional Resource Sharing: A Strategy for Improving Western Higher Education in an Era of Limits.

Western Interstate Commission for Higher Education, Boulder, Colo.

Pub Date—Sep 83

Note—27p.; Paper presented at the Annual Meeting of the Western Interstate Commission for Higher Education (Seattle, WA, December 1982). Available from—Western Interstate Commission for Higher Education, P.O. Drawer P, Boulder, CO 80302.

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Agency Role, College Programs, *Cooperative Planning, Cooperative Programs, Educational Planning, Educational Supply, *Geographic Regions, Higher Education, *Intercollegiate Cooperation, *Regional Cooperation, Resource Allocation, *Shared Services, Student Exchange Programs

Identifiers—United States (West), *Western Interstate Commission for Higher Education

The advantages of resource sharing in higher education are discussed, and the role of the Western Interstate Commission for Higher Education (WICHE) in facilitating cooperation is considered. A primary concern is to overcome the barriers of state boundaries to promote academic planning in the West. These issues are considered in a WICHE conference paper, commentaries from four panelists at the WICHE conference, and a summary of the major points made during a question and answer period. It is noted that regional cooperation can ensure that: not every state or every institution needs to be comprehensive in its higher education offerings; high-cost, low-demand programs are not duplicated; resources are allocated or reallocated more efficiently across the region, or among groupings of states; institutional resources are combined or coordinated to improve program effectiveness; and student access to uncommon programs is protected. Among the activities of WICHE are professional student exchange programs, cooperative manpower planning, and interstate program coordination. Additional topics include the nature of retrenchment, telecommunications, cooperative programming, and the role that WICHE might play with policy-makers. Commentaries are provided by William Richardson, William Boyd, Martha Butt, and Ann Mary Dussault. (SW)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—Agency Role, College Role, *Females, Higher Education, *Interprofessional Relationship, *Mentors, Minority Groups, Models, Nontraditional Occupations, Nontraditional Students, *Professional Development, Program Descriptions, *Student Teacher Relationship, *Women Faculty

Issues concerning mentoring for women in higher education are discussed. After identifying benefits of mentoring for the protégé, the mentor, and the institution, barriers to traditional mentoring for women are considered. Attention is directed to why men may hesitate to mentor women students and faculty, why female mentors are hard to find on campus, and why some women may exclude themselves from mentoring relationships. In addition, new approaches to mentoring for women are considered, including multiple mentors, networks, and paper mentors. Information is also provided on the following questions: how to decide if mentoring is needed, how to be selected by mentors, and how to be a mentor. Consideration is also focused on the following groups of women with special needs: women in nontraditional fields, older women, minority women, and disabled women. Five model programs are described that cover the following: an informal institution-wide approach, research mentors for minority and women faculty, the career cooperative, a career development program for women students, and a peer advising program for women students. Additional recommendations are offered for colleges, as well as for associations, disciplinary groups, and other organizations. Reference notes, a bibliography, and a list of information sources are appended. (SW)

Descriptors—Academic Advising, *Adult Students, *Ancillary School Services, Foreign Countries, Higher Education, Information Needs, Institutional Research, *Nontraditional Students, School Orientation, *Student Adjustment, Student Characteristics, *Student College Relationship, Student Needs

Identifiers—*University of Alberta (Canada)

Findings and recommendations of a University of Alberta task force study on the mature student are presented. Study objectives were as follows: to identify the characteristics of the mature student population at the university, to identify major concerns and needs of this population, to determine to what extent the university meets the needs of the mature student, and to survey the support mechanisms for mature students in the general community. The following institutional problems are examined: obtaining preadmission information; obtaining information from faculty offices; academic counseling; support services (library, offices, bookstore); choice of evening courses; residency requirements; registration; transfer of credits; credit by special assessment; parking; and study space. Situational problems are also covered: time pressures; balancing multiple responsibilities; finances; child care; lack of encouragement from family and peers; disruption of family life; and lack of peer group contact. In addition, the following academic concerns are addressed: examinations, essay writing, study habits, skill improvement, and upgrading and remediation. A bibliography and study questionnaires are appended. (SW)

Descriptors—Agency Role, *Foreign Students, Higher Education, *High School Students, *International Educational Exchange, *Organizations (Groups), *Student Exchange Programs, *Study Abroad

Identifiers—*California (San Francisco Bay Area)

Information on the nature and scope of organized international exchange programs at the high school level in the nine-county Bay Area of California is presented. In addition to providing an overview of the local situation, information is provided on 19 organizations that are involved in student exchange. The following problems that have been encountered are also considered: finding host families, understaffing of agencies, and the lack of interest expressed by American high schools. The organizations consist of three major national organizations, eight additional major organizations with a strong Bay Area presence, and other local or national organizations and programs. The three major national organizations are the American Field Service, the Experiment in International Living, and Youth for Understanding. In the 1981-1982 academic year, these three organizations brought about 406 foreign students to the Bay Area and sent about 279 Bay Area students to foreign countries. Other organizations that have a strong Bay Area presence include: the American Institute for Foreign Study, the Pacific American Institute, Amigos de las Americas, the Bureau of Jewish Education, the International Christian Youth Exchange, Educational Foundation for Foreign Study, Interstudy, and the American International Education and Training. Identifiers—*California (San Francisco Bay Area)

Results of a survey of international student exchange programs in the Bay Area of California are presented. Information is provided on the following: the top 10 countries of origin for Bay Area foreign students; 10 Bay Area institutions with the highest number of foreign students; 10 area institutions with the highest percent of full-time enrollment; percentage of area foreign students by type of institution; percentage of foreign students in engineering, computer science, and business; source of financial support for area foreign students; and source of financial support for area foreign students per category of institution. Findings include the following: foreign students in the Bay Area number 14,410, or 27 percent of California's total; foreign students represent over 159 countries; Iran (pre-revolution), Taiwan, and Japan have more students in the Bay Area than any other countries; Hong Kong is a close fourth and Canada is fifth; University of California at Berkeley and Stanford University lead the list of Bay Area university foreign student enrollments; graduate students constitute 45 percent of foreign student enrollments in Bay Area universities; business, engineering, and computer science attract the largest numbers of foreign students; and foreign students spend about \$150 million annually in the Bay Area. Identifiers—*California (San Francisco Bay Area)

The way that college business programs address international dimensions was studied, based on a survey of business curricula in 11 colleges and universities in the San Francisco Bay Area. Information was gathered in 1982 from catalogs and written materials as well as from telephone interviews. All of the schools studied, except Stanford University, offer a bachelor's degree in management or international business administration. All but two offer at least one undergraduate course in international business administration. In 1983, four of the schools offer a specialized concentration in international business. However, undergraduate student enrollment in international business programs is small, and the number of students going abroad to work or study is even smaller. All 11 colleges offer at least one master's level course in international business. The average number of courses per school is 9.5, ranging from 31 courses to 1 course. Only two schools report systematic use of foreign students as sources of cross-cultural knowledge. A profile of the curriculum, its underlying philosophy, and its faculty is presented for each of six specialized master's programs in international business. Appendices include interview questions and a list of business and related courses offered at Bay Area schools. (SW)

Identifiers—*University of California Berkeley

International involvements at the University of California, Berkeley (UCB), are described. UCB's international activities are not shaped by any official campus plan, but result from the efforts of individual scholars and various campus organizations. Four broad types of internationally-focused activities at UCB are as follows: academic exchange programs; the exchange of ideas and experience through conferences, seminars, and workshops; technical assistance involving a variety of experts and specialists; and extracurricular education such as music, film, art, theater, and sports. In contrast to the pattern for foreign students coming to UCB, 92 percent of local students who go overseas from UCB are undergraduates, and most of them major in the social sciences, languages, and humanities. In 1981 about 2,100 immigrant foreign students and 1,860 nonimmigrants were attending UCB, and most were studying engineering and the sciences. Of the nonimmigrant foreign students, the majority were male graduate students. Foreign scholars who are involved in teaching or research at UCB represent 72 countries and totaled 1,512 in 1981, most in the fields of science and technology. Technical assistance by UCB involves the transfer of knowledge, skills, and technology, often to the Third World countries. (SW)

A Comprehensive Model for Assuring Quality in Off-Campus Programming.

Pub Date—[83]

Note—17p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Armed Forces, *College Programs, Educational Planning, *Educational Quality, *Extension Education, Higher Education, *Improvement Programs, Military Personnel, Needs Assessment, *Off Campus Facilities, Program Evaluation, Public Relations, School Community Relationship

Identifiers—GI Bill

A model for evaluating the higher education programs offered at Army bases is described. Attention is focused not only on what off-campus staff can do to develop and maintain quality, but what can be done to demonstrate to outsiders the achievement of quality. It is suggested that the institution needs to have genuine concern for quality, a commitment to change, and a high level of action directed to improvement. The process of insuring quality involves educational program needs assessment, strategic planning, continuous program review, personnel training, and an education community plan. The improvement activity must be organized and systematic and based on reliable information. Additional elements that are needed are a periodic external review process and public information programs. In addition to the establishment of mission (an intersection of community and institutional values) and the development and review of program plans, the model is based on openness to external review for public assurance and the provision of an open information flow to the general public. The Effects of Academic Market Value on the Outliers of a Multi-Variant Regression Analysis of Faculty Salaries.

Pub Date—83

Note—18p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*College Faculty, Comparative Analysis, *Departments, Full Time Faculty, Higher Education, Intellectual Disciplines, *Labor Market, Models, Multiple Regression Analysis, *Salary Wage Differentials, *Teacher Salaries

Three models to describe university salary structure were assessed. Attention was focused on full-time, permanent faculty in ranks of instructor through full professor. Model 1 postulated that the internal labor market is uninfluenced by the external academic market. The results of model 1 were compared to the results of a model that adjusted for

the market value of academic disciplines. It was found that the market value of academic disciplines have a considerable effect on the regression residuals. The judgment as to which departments are underpaid is almost completely dependent upon whether the market factors are or are not considered. Statistical measures indicated that the model incorporating external market effects (model III) has less auto-correlation of the salary residuals and is therefore the preferred model. A further comparison of two models, utilizing slightly different sets of market factors (Model II and Model III), showed that the salary residuals are extremely sensitive to data changes. (SW)

Prather, James E. And Others
Evaluations by Students in Mathematics Courses of the Effectiveness of Teaching.

Pub Date—25 Jan 84
Note—13p.; Paper presented at the Annual Meeting of the American Mathematical Society (Louisville, KY, January 25, 1984).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*College Mathematics, Higher Education, *Mathematics Instruction, *Predictor Variables, Reliability, *Student Evaluation of Teacher Performance, *Teacher Effectiveness, Validity

The extent to which students' ratings of teacher performance in mathematics courses are reliable, valid, and unbiased was investigated. Data on 746 courses by 52 faculty members over a 4-year period were used in a multiple regression analysis. It was found that students gave higher evaluations to faculty members when the students had previously taken a course with the faculty member. This evidence suggests that the measure of students' "repeating" with faculty members can be a valid indicator of teaching effectiveness. However, student ratings and the repeat measure are subject to the same biases. Teacher personality, student motivation, and orientation could affect the repeat measure in a manner similar to their effect on student ratings of teacher effectiveness. The variables having a moderately strong, positive association with students' ratings include: average number of repeats, percent of lecture courses taught, average grades in the course, number of previous courses taken, percent of lower level courses taught, total average grade point average (GPA) and percent of reading and research tutorials taught. Negative factors are: average GPA of students in the course, percent of students withdrawing, attendance rate of

students, number of courses taught, class size, and percent of courses taught at upper level. (SW)

Diagnostic Prescriptive Teaching Module: Basic Interviewing Skills.

Pub Date—[84]
Note—28p.
Pub Type—Guides - Classroom - Learner (051) — Tests/Questionnaires (160)

EDRS Price - MF01/PC02 Plus Postage.
Descriptors—Check Lists, *Communication Skills, Diagnostic Teaching, Higher Education, Interpersonal Communication, *Interviews, *Learning Modules, Listening Skills, *Medical Case Histories, Medical Education, *Medical Students, *Physician Patient Relationship, Questioning Techniques

A diagnostic-prescriptive teaching module on basic interviewing skills for first-year medical students is presented. The goal of the module is to help students refine interpersonal communications skills relative to the medical interview. The module provides information on the following skills: eliciting patient responses, interviewing techniques and terminology, observing and interpreting patient's methods of expression, and awareness and management of feelings evoked during an interview. Specific objectives include the following: (1) identify examples of interviewing techniques that are facilitative; (2) identify examples of open-ended questions, clarifying statements, recapitulation, focused questions, and emphatic statements; (3) consider both the specific content of the interview and modes of expression when listening to patients; (4) identify kinds of linguistic communication and paralinguistic communication; (5) list four types of behavioral communication and five typical feelings expressed by patients; and (6) support the rights of patients to their own feelings, philosophies, moral codes, and life styles. Test items are included. (SW)

Results of the fall 1983 survey of enrollments at private colleges and universities are presented. Of the approximately 1,500 independent colleges, more than 1,200 institutions responded. Survey findings include the following: only universities lost total enrollment, while two-year colleges increased enrollment by 5.6 percent; total enrollment increased in all regions; almost 412,000 full-time freshmen entered private colleges; graduate enrollment increased by 2.63 percent; 65 universities, which account for about 4 percent of all private colleges, enrolled about 44 percent of all graduate students; and universities and specialized institutions enrolled about 76 percent of all first-professional students, with comprehensive colleges and universities accounting for another 21 percent. Data are provided that show aggregate and median percentage change in full-time entering freshmen by type of institution. Additional statistical tables cover the following: percent change of entering freshmen by region and size of college; full-time and part-time undergraduate enrollment; percent change in undergraduate enrollment by type of institution, region, and institution size; full-time and part-time graduate and first professional enrollment trends; and headcount enrollment trends. Lumpkin, Oliver R.
Qualified Black Students' Images of a Public Desegregated Southern University.

Pub Date—Mar 83

Note—62p.

Pub Type—Reports - Research (143) — Tests/Questionnaires (160)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Academic Aspiration, *Black Students, College Attendance, College Desegregation, Comparative Analysis, Family Characteristics, Financial Needs, Geographic Regions, Higher Education, *High School Students, Institutional Characteristics, Parent Student Relationship, Questionnaires, *Reputation, *State Universities, *Student Attitudes, Student Characteristics, *White Students

Identifiers—Clemson University SC, South Carolina

Attitudes toward Clemson University of qualified black and white students were compared. A "qualified" student is defined as an eleventh grader in the public schools of South Carolina's Third Congressional District who has scored at least 78 on the Preliminary Scholastic Aptitude Test. The objective was to identify differences in contemporary black/white images of a public, desegregated institution in order to promote student recruitment and to increase applications from qualified black students. Usable questionnaire responses were obtained from 891 students. Information is presented on the attitudes of black students and white high school students concerning the university's fields of study, the school's academic standards, their need for financial aid, whether the university is interested in black students and the university's treatment of black and white students, possible membership in a sorority, the university's treatment of black faculty members and staff, students' plans to attend postsecondary education, and consultation of students with parents and school counselors about college attendance. Demographic information on the students and their families is included. A literature review and study questionnaire are included. (SW)

Descriptors—*Faculty College Relationship, *Faculty Development, Higher Education, *Performance Contracts, Productivity, *Program Development, Teacher Motivation, *Teacher Participation

Identifiers—*Faculty Growth Contracting

The concept of growth contracting in higher education and the applications and limitations of growth plans are examined. In addition, critical steps in the process of developing contracts with faculty are identified. A professional growth plan is a binding agreement, which helps faculty and institutional representatives clarify specific goals. Support for reaching stated professional goals remains in effect until the agreement is mutually terminated. Contracting could be used for curriculum and program development, as well as for the acquisition of new research skills or experience. A faculty development advocate helps the faculty member become aware of all available resources. One limitation is that the plan is restricted to what is written, and midcourse alterations are not made easily. To motivate faculty members to participate, the benefits of the program must be made clear to the faculty. It is imperative that a healthy collegial relationship between faculty member and coordinator be established from the start. A final and important part of growth contracting is monitoring the plan once it has been initiated. A checklist of items to be considered for growth contracts is included, along with a list of strategies for information giving and information gathering during interviews with faculty members. (SW)

Descriptors—Administrator Responsibility, *Donors, *Eligibility, *Financial Policy, Guidelines, Higher Education, Models, *Philanthropic Foundations, *Private Financial Support, *Program Administration, School Business Relationship, Trustees

Identifiers—Dartmouth College NH, International Business Machines, *Matching Gifts

Guidelines are presented to help colleges consider their matching gift program, to develop clear policies and procedures, and communicate them to interested and appropriate parties. Responsibilities of companies sponsoring matching gift programs are outlined with attention to policy and program administration. The eight policy recommendations cover eligibility of potential recipient institutions, eligibility of donors, the nature of contributions eligible for matching, payment of matching gifts, restricting the uses of matching gifts, and public disclosure. The responsibilities of the following members of the recipient institutions are discussed: the board of trustees, the chief executive, and the officer responsible for administration of donor contributions. The role of institutionally related foundations, funds, or associations are also addressed. In addition, responsibilities of donors are briefly covered. To illustrate how a successful matching gift program might be administered by a corporation and by an educational institution, two program models are included: the IBM Matching Gift Program for Higher Education, and the Dartmouth College Alumni Fund Matching Gift Program. Descriptors—*College Role, Educational Objectives, *Education Work Relationship, Engineering, Higher Education, *Labor Force Development, *Liberal Arts, Private Colleges, School Business Relationship, *Sciences, Student Development, Technological Advancement, Technological Literacy, *Technology

Problems and opportunities posed for liberal arts colleges by the current political concern for educating students for high technology industries are considered. Recent reports on education, high technology, employment, and economic growth are concerned with the competitive position of the United States versus other industrialized nations, especially Japan. These reports also suggest the need to develop scientific and technological leadership, as well as a technically sophisticated work force capable of producing new products. Attracting students into science and engineering fields, setting higher standards in these disciplines, and building close university-industry relations have also been emphasized. It is claimed that the educational basis for economic prosperity in the future will still depend on analytical skills, creativity, communication skills, a knowledge of major social institutions, and sensitivity to ethical issues. The following suggestions are offered: (1) more serious attention should be paid to defining "scientific and technological literacy" and then giving it a central place in the curriculum; and (2) effort should be directed to prepare students for a world of international dependence and to be perceptive citizens of large social, economic, and political institutions. A list of associations of private colleges is appended. (SW)

Descriptors—*Business Responsibility, Consultation, Programs, Educational Change, *Educational Quality, *Higher Education, Improvement Programs, *Private Financial Support, Research Projects, *School Business Relationship, Technical Assistance

The contributions that business and industry can make to help colleges and universities maintain high standards of teaching, scholarship, and research are considered. Four recent studies that address the deterioration in educational standards are noted, and the problems that confront colleges and universities are identified. It is suggested that business should support university research, possibly in the form of research grants or research cooperation, fellowships for young researchers, or gifts of equipment. Corporations should also allocate financial support to the general mission of colleges for activities that may not relate directly to their business interests (e.g., libraries, general scholarships, faculty development). In addition, business and industry can encourage collaboration between colleges and school systems. Business is going to have to commit some resources directly to the schools or associations representing schools. Many companies are providing the following support: lending personnel as adjunct teachers and advisers, offering management refreshers to school administrators, helping with facilities and equipment, and providing summer opportunities for teachers and students. Identifiers—United States (North Central), United States (Northeast), United States (South Central), United States (Southeast), United States (West)

Projections of high school graduates for each of the 50 states and the District of Columbia from 1982 to 2000 are presented to update projections made in 1979. The projections for 22 states are based on the combined numbers of graduates of public and nonpublic schools. The projections for the remaining 28 states and the District of Columbia are for public high school graduates only. There were notable similarities among most of the states in some regions and notable contrasts among the various regions. For four regions of the United States, information is provided on the pattern of projected high school graduates during 1981-2000 in terms of the percentage change from 1981. The states that comprise the following four regions are identified: northeast region, northcentral region, southeast-southcentral region, and western region. The following data for each state are also presented: the actual, annual number of graduates for 1975-1976 through 1981-1982, and projections for 1982-1983 through 1999-2000. A designation under each state indicates whether the projections are for public high school graduates only or for graduates of public and nonpublic schools combined. A narrative summary of the findings is included, along with information on the study methodology. (SW)

Descriptors—*Administrative Policy, Ancillary School Services, *College Admission, Educational Policy, *Enrollment Trends, *Foreign Students, Higher Education, School Surveys, State Action, *State Colleges, Student College Relationship, *Tuition

Trends in foreign student enrollments and the policies of public colleges toward foreign students were surveyed as a followup to a 1981 survey. Of 1,491 colleges that received questionnaires, 904 responded. Special attention was focused on differences in the patterns of results for institutions with large foreign student populations, institutions with high rates of growth of foreign students, and states with the largest number of foreign students. Re-

search concerns pertained to foreign student services, admissions and enrollments, and tuition policy. Findings include the following: the adequacy of services for foreign students has decreased; changes with regard to financial assistance and qualifications for admission are more likely to be adverse than favorable; changes in policy introduced by the institutions with the largest numbers of foreign students depart from the norm but the direction of their impact is not consistently either positive or negative; among the states with the largest concentrations of foreign students, only New York stands out as having made it more difficult for foreign students to come; and the institutions where the foreign student population is growing at a relatively rapid rate appear to encourage this growth and are clearly not taking actions to restrict it. Descriptors—*Elementary Secondary Education, Enrollment Trends, Expenditure Per Student, Expenditures, *Financial Policy, *Government School Relationship, *Higher Education, Income, Population Trends, Regional Characteristics, Resource Allocation, *State Aid, *Tax Allocation, Trend Analysis

Data on 1982-1983 state support for elementary/secondary and higher education are presented. The objective is to provide policymakers information on how funding decisions vary and to promote self-analysis of how well each state is doing. Data and narrative analysis of regional trends cover: demographic characteristics, state support for elementary/secondary and higher education, and state general expenditure levels. Four basic demographic characteristics important to understanding and planning for state educational support are addressed: population, income, enrollment, and state expenditures. Separate tables for elementary/secondary education and for higher education include the following subcategories: state support in millions, the percentage change from 1977-1978 to 1982-1983, state support as percent of state expenditures, support per pupil, support per capita, and support per \$1,000 personal income. Finally, the relationships between state support for elementary/secondary education and state support for higher education is examined, and the states are classified in terms of whether support for one level of education is being provided at the expense of support for the other level. Numerous graphs and maps are included, along with an insert (24 by 36 inches) of highlights from the text. (SW)

Identifiers—*Northeastern University MA
The advantages of cooperative education for English departments and the role of the faculty member as a consultant for the program are discussed, based on the experience of Northeastern University. Attention is directed to starting this type of program in the English department, the consultant's role as a catalyst, placing English majors, and motivating students. For the faculty advisor and consultant, participation offers the opportunity to gain professional business experience and contacts. It is sug-

gested that the consultant is an active faculty member in teaching, publication, and scholarship. Cooperative education is the student's first experience in searching for a career. At the end of the experience, the cooperative education program serves as a transition to the workplace, and permanent employment with the employer may occur. It is noted that the writing talent of English majors is valued by groups within large organizations, such as corporate relations, marketing, advertising, information services, personnel, and human resources. In addition, business executives recognize that a background in liberal arts provides essential knowledge, cultivates intellectual skills, and develops personality and character. (SW)

The Richness of Language and the Poverty of Part-Timers: Impact and Invisibility.

Pub Date—Dec 83

Note—13p.; Paper presented at the Annual Meeting of the Modern Language Association (New York, December 1983).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price — MF01/PC01 Plus Postage.

Descriptors—*Employment Practices, *Faculty College Relationship, Higher Education, *Part Time Faculty, *Personnel Policy, *Teacher Attitudes, Teaching (Occupation), *Teaching Conditions

The difficulties experienced by part-time faculty members are discussed, and some benefits of part-time teaching are identified. Among the problems faced by part-time staff are per-course salaries, lack of college-paid benefits, job insecurity, and invisibility on campus. If the part-time teaching position is a primary source of income and career satisfaction, the teacher may be discouraged by exclusion from faculty governance, from opportunities for professional growth, and from possibilities for recognition and reward. On the other hand, part-time teaching can be a challenge if it is a break from a full-time job, a chance to stay in touch with the classroom, an opportunity for important professional connections, and a supplementary source of income and career satisfaction. Part-timers need to be treated like colleagues, paid fairly, and given ade-

quate encouragement and opportunity for professional growth. It is possible that part-timers' low wages and hard work covering introductory courses may make it possible for the academic profession to survive the current demographic crisis. (SW)

Descriptors—Behavioral Science Research, *Cognitive Development, College Instruction, *Educational Strategies, Higher Education, *Motivation Techniques, *Problem Solving, Psychological Studies, Teaching Methods

The relationship between cognitive development and problem-solving skills is discussed. One approach for improving students' problem-solving skills rests in the application of cognitive development theories to instruction. Instructional strategies that facilitate cognitive development can be categorized into two groups: instruction that challenges the student's cognitive structures or creates disequilibrium, and instruction that provides support such that the student will engage in the opportunity created by the disequilibrium. Four types of instructional strategies that have been used successfully to introduce disequilibrium are considered: creating dissonance, direct experience, diversity, and social transmission. Three strategies that increase the probability that students will engage in the learning process and attend to the cognitive disequilibrium are also discussed: structure that focuses the students' attention on the disequilibrium, psychological support to help students manage the ego-threatening activities of learning, and "plus-one" instruction designed to tune into the students' level of thinking. It is suggested that some combination of instructional methods under certain conditions can facilitate cognitive growth. (SW)

An appraisal of medical education and college preparation for medicine was undertaken through public hearings and written submissions from 82 medical schools, 24 colleges, and 21 professional societies. Views and suggestions were provided on learning, clinical education, college preparation and admission to medical school, and faculty. It was suggested that despite the enormous amount of time devoted to instruction, medical school students are not necessarily prepared to be independent learners who can apply critical, analytic abilities to problem-solving. Concern was expressed regarding the emphasis on memorization of factual details and the need for faculty to identify essential concepts and principles. More small group instruction and more time for independent learning were also recommended. The contribution of computer technology

and overall impediments to change in medical education were also identified. The clinical component was characterized as permissive, often poorly-integrated, and frequently undersupervised. Another concern was the debate regarding a balanced preparation for medical school (i.e., sciences versus humanities). Greater recognition for the educational efforts of medical school faculty members was suggested in order to accomplish changes needed in the general professional education of the physician. (SW)

Identifiers—Blue Ribbon Commissions, *Guaranteed Student Loan Program, *National Comm on Student Financial Assistance

A brief overview of the recommendations of the National Commission on Student Financial Assistance is presented. The Commission was asked to answer 24 congressionally determined questions, and to report its findings on each within 2 years. Major findings and recommendations are presented concerning: satisfactory academic progress, the in-school interest subsidy that the federal government pays under the Guaranteed Student Loan (GSL) program, the insurance premiums charged to borrowers under the GSL program, the special allowance of the GSL, administration of student financial assistance programs, the impact of the student aid programs and their effect on student access and choice, graduate education student financing, and the appropriate balance between various types and sources of student aid. Findings include the following: no systematic effort was being undertaken to assess the standards currently being employed by postsecondary institutions; the enforcement of these standards was not being sufficiently monitored by the U.S. Department of Education; and the buying power of student financial assistance has been eroding and aid distribution patterns have been unbalanced. The titles, prices, and publication numbers of the seven Commission reports and 41 commissioned papers are listed. (SW)

Factors Affecting the Underachievement of Academically Able College Students.

Pub Date—Oct 83

Note—10p; Paper presented at the Joint Annual Conference of the Rocky Mountain Association for Institutional Research and the Southwestern Region of the Society for College and University Planning (Taos, NM, October 12-14, 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Academic Achievement, Academic Advising, *College Freshmen, Grades (Scholastic), Higher Education, Institutional Research, *Student Motivation, *Underachievement

Reasons for the underachievement of 44 qualified college freshmen were studied. The students had above-average scores on the American College Testing program examination but earned below-average grades in their first year in college. They were invited to discuss their academic status and perceptions of college life with an academic advisor. It was found that for the majority of the respondents the main difficulty was the lack of appreciation for the demands of college-level work. Many students reported that they did not have the necessary self-discipline for independent learning and others were unable to balance their employment commitments with their academic responsibilities. The findings

have clear implications for orientation and freshman advisement. Perspective students could be alerted to typical problems for freshmen that may lead to serious academic difficulties in the early semesters of a student's life in college. (Author/SW)

Descriptors—*Clinical Teaching (Health Professions), *Faculty Development, Higher Education, *Instructional Improvement, Lecture Method, *Medical School Faculty, *Professional Continuing Education, *Small Group Instruction, Teacher Effectiveness, Teaching Methods

The experiences of a group of seven physicians and medical school faculty who wished to improve their instructional capacities are described by the educational psychologist who led the study group. The participants held appointments at the University of North Dakota School of Medicine and had responsibility for teaching medical students in clinical settings. The participants rank ordered their goals and took part in planning decisions for the group. Through weekly meetings, the group discussed lecturing and small group instructional techniques. Some group members developed a form to be used in critiquing lectures, and individual members made presentations to the group and heard other group member's critical comments. The preparation of slides was identified as an area of interest for the group. During the 8 months of meetings, specific practical techniques were mastered, as were understandings of a more theoretical nature. Perspectives on the group's functioning are offered, and developmental stages of small groups, proposed by T. W. Tuchman, are reviewed. Reasons for the group's success are also identified, including the interest of the members in improving their teaching skills, the personal support provided by group members, and the strong emphasis on the practical. EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Admission Criteria, *College Choice, College Faculty, College Programs, College Students, Comparative Analysis, *Counselor Role, Educational Quality, Higher Education, *Institutional Evaluation, Institutional Research, Reputation, *School Counselors, State Surveys, *Student Recruitment

Identifiers—State University of New York Coll at Brockport

The contribution of high school guidance counselors during the information and inquiry stages of students' selection of a college was assessed. A statewide population survey of all high school counselors in New York yielded 660 usable responses (20 percent). Attention is focused on quality estimations of four criteria for 15 institutions. Quality assessments of faculty, programs, students, and selectivity were made for each of the 15 institutions. Regional and statewide comparisons were developed to allow monitoring changes in particular geographic areas of interest. From the survey data, a current image or college profile was developed to serve as a comparative baseline in successive years as the State University of New York College at Brockport attempts to increase standards and to improve the quality of its entering classes. Based on the findings, it was concluded that Brockport needs to improve its image among its clientele. College admission counselors can effectively enlist the assistance of high school guidance counselors to further their goal. (SW)

Shroyer, George

Montana University System Faculty Vitality Project.

Pub Date—Oct 83

Note—7p.; Paper presented at the Annual Meeting of the Northern Rocky Mountain Educational Research Association (Jackson Hole, WY, October, 1983).

Pub Type—Reports - Descriptive (141) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*College Faculty, Curriculum Development, *Faculty Development, Higher Education, Multicampus Colleges, Program Evaluation, *State Colleges, *Teacher Exchange Programs, *Teacher Morale

Identifiers—*Montana University System

The Montana University system's faculty vitality project is described. One component of the project is faculty exchanges among the six units of the Montana system. Hampered in program development by small staffs and inadequate resources, and cut off from professional contacts by limited travel budgets, the faculty of three small colleges in particular have felt left out of the mainstream of academic life. Faculty exchange provides exposure to new concepts and professional challenges. Faculty reallocation and development is a second project focus, since faculty members may be reallocated from over-staffed departments/programs to those that are under-staffed. In some cases, the faculty will require some additional training. Additionally, released time for faculty has been provided for course and program development. Finally, one of the best faculty vitality projects has been its evaluation system. Faculty members from each of the six units have been chosen to serve on the evaluation team, which evaluates proposals and projects at different campuses. (SW)

Descriptors—Case Studies, *College Planning, Educational Objectives, Higher Education, *Nursing Education, *Participative Decision Making, *Self Evaluation (Groups), Teacher Administrator Relationship, Teacher Attitudes, *Teacher Participation, *Teamwork

Identifiers—Institutional Mission, Strategic Planning, *University of Texas

The development of a 6-year strategic plan at the University of Texas Health Science Center at Houston School of Nursing is described. Major features of the plan include the organization of a planning task force with both faculty and administrative representation, a modified Delphi survey of faculty opinions about future directions for the school and the university, and extensive involvement of faculty in review and write-up of the school's future goals. Benefits of the planning process included the development of realistic and prioritized goals for the school, increased participation of faculty in programmatic and budgetary planning, and the preservation of administrative review and approval of final schoolwide priorities. Problems encountered during the process included evidence of discrepancies between faculty and administrative goals for the school, and problems associated with insufficient time allotted to conduct the process and to provide ample opportunities for extensive faculty discussion of final plans. Each 6-year plan was to include the information on: mission, the status of implementation of each goal, internal and external conditions that the school should address, descriptions of planned program changes, and a contingency plan. An overview of the mission of the nursing school is included. (Author/SW)

UW-Madison's Enrollment Prospects for the 1980s and Early 1990s.

Pub Date—[83]

Note—52p.

Pub Type—Numerical/Quantitative Data (110) — Reports - Research (143)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Enrollment Influences, *Enrollment Projections, Females, Higher Education, In State Students, *Long Range Planning, Minority Groups, Out of State Students, Population Trends, *Undergraduate Students

Identifiers—Scenarios, *University of Wisconsin Madison

Enrollment patterns for the University of Wisconsin, Madison, for the period 1983-1995 are projected. Three possible scenarios, each representing a different set of assumptions concerning factors that affect undergraduate enrollment, are presented. The projections are based on demographic and secondary school enrollment data, and on historical patterns in the institution's enrollment. The cohort-survival technique was employed. It is projected that the university's undergraduate enrollment will probably decline slowly over the next 10 to 12 years and then begin to increase again. The decline is smaller than would be expected by Wisconsin demographics and is built on the assumption that the proportion of 18-year-olds who attend the university will continue to increase, and that the nonresident undergraduate enrollment and nontraditional age enrollment will remain constant or increase. The use of more optimistic assumptions regarding the enrollment of women, minorities, nonresident students and older students projects an even smaller decline. Patterns in the enrollments of these subgroups are examined in detail. Graduate enrollment is projected to remain at approximately the current level. Statistics for projected enrollments are appended. (Author/SW)

A Study of Attrition in the Regents External Degree Program.

Pub Date—[83]

Note—13p.; Best copy available.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Academic Persistence, Dropout Attitudes, *External Degree Programs, Higher Education, Institutional Research, *State Universities, Student Attitudes, *Student Attrition, Student Characteristics

Identifiers—*Regents External Degree, *State University of New York

Problems associated with determining attrition rates and causes of attrition in the Regents External Degree Program of the University of the State of New York were studied. Students were defined as having dropped out of the program if they had not paid their annual records fee (registration fee). Data are provided to compare attrition figures to the total number of active and graduated students. Inactive students were surveyed to determine why they had become inactive and how satisfied they were with the program. In addition, as part of a larger survey (1981 candidate/graduate study), information was collected on characteristics of inactive students, previous education, occupation, and views of selected program policies. In 1982, a survey form was sent to respondents of the 1981 candidate/graduate study to determine how they had progressed in their studies. Active candidates were categorized as those becoming inactive during the last year and those who had graduated during the last year. Finally, in 1983, students were surveyed as they become inactive. The findings of the surveys are summarized, and the most important reasons for being inactive are identified (e.g., finances, time) for students from five college degree programs. (SW)

A Study of Test-Wisdoms Clues in College and University Teacher-Made Tests with Implications for Academic Assistance Centers. College Reading and Learning Assistance Technical Report 84-01.

Pub Date—[84]

Note—17p.; Best copy available.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—College Instruction, Educational Research, Higher Education, *Multiple Choice Tests, *Teacher Made Tests, *Test Construction, *Test Wisdoms

A study was conducted to determine to what extent college teacher-made multiple-choice tests con-

tain test-wisdoms clues that can be used to identify correct answers. A sample of 43 undergraduate teacher-made examinations was obtained from two colleges and three universities. The sample included midterm and final examinations and quizzes. The tests were written by 36 faculty members, including 9 assistant professors, 23 associate professors, and 4 full professors. A total of 1,220 multiple-choice questions were evaluated based on 10 test-wisdoms criteria (Millman, et al., 1965). It was found that 44 percent of the items contained a test-wisdoms clue, and 70 percent of these items could be answered correctly by applying a clue. The clue discovered most often was "direct opposites" (i.e., writing an alternative directly opposite to the correct answer). The overall most successful clue was "key word association." It is suggested that college teachers need to consider how to avoid these clues when developing examinations. Implications for college personnel responsible for student academic improvement and faculty development are addressed. Explanations of the 10 test-wisdoms criteria are included, along with information on the data analysis procedures. (SW)

The Undergraduate Internship: A Team Effort.

Pub Date—[84]

Note—8p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Agency Role, *Experiential Learning, *Faculty Advisers, Higher Education, *Internship Programs, *Program Administration, *Staff Role, Student Experience, Student Responsibility, *Undergraduate Students

Components of successful internship programs for undergraduates are identified, along with the functions of the team who contribute to a successful internship. Principal team members are the faculty internship coordinator, the faculty supervisor, and the agency supervisor. The student will benefit from taking an active role in the placement process by researching prospective organizations, developing objectives, and preparing a resume. Weekly reports should be generated by the student, reviewed by the agency supervisor, and sent to the faculty supervisor. The faculty coordinator's responsibilities include monitoring placements, assigning faculty supervisors, and handling administrative details. The faculty supervisor maintains communication with the student and visits the student in the field at least once. The agency supervisor should meet with the intern on a regularly scheduled basis to assess progress and explore various topics of mutual interest. The student should be expected to assume a broad range of responsibility while observing meetings and leadership situations throughout the organizational hierarchy. The internship program associated with the recreation and park administration department at Western Illinois University is briefly noted. (SW)

Descriptors—*Computer Assisted Instruction, Computer Literacy, Computer Programs, *Computer Science Education, *Elementary Secondary Education, Higher Education, *Microcomputers, Teacher Certification, *Teacher Education

Identifiers—United States (South)

The uses of computers in the classroom are discussed, and the implications of these uses in an information-based society are addressed. Three types of computer applications are examined: learning about computers and their relation to society, including computer programming; learning through computers, which includes drill-and-practice, diagnostic testing, and tutorial programs; and learning with computers, which is using the computer as a tool of instruction and creating an environment where learning may occur. Some fear that in the rush to include computers and computer literacy in

the school curriculum, the teaching of reading, writing, and mathematics will be put aside. Another issue is that access to computers in schools may differ along socioeconomic lines. The proportion of elementary and secondary schools having microcomputers for instruction is increasing in the 1980s. However, southern elementary schools are less likely to have a microcomputer than elementary schools outside the South. Colleges and universities are moving to include computer training for teachers at both preservice and inservice levels. Nationally, several states now have teacher certification in the area of computer education. To address the problems of inadequate software, district, state, and national level efforts are underway. Admission Standards: National Trends in Public Higher Education.

Connecticut State Board of Higher Education, Hartford.

Pub Date—May 83

Note—46p.

Available from—Connecticut State Department of Higher Education, 61 Woodland Street, Hartford, CT 06105.

Pub Type—Numerical/Quantitative Data (110) — Reports — Research (143)

EDRS Price — MF01/PC02 Plus Postage.

Descriptors—*Admission Criteria, Higher Education, National Surveys, Open Enrollment, Public Education, *Required Courses, *Standards, *State Boards of Education, *State Colleges, State Universities, Trend Analysis

Results of a survey of college admission standards in the United States are presented. In addition to providing information on current and proposed admission standards by state, the status of current and proposed admission standards of state governing/coordinating agencies is covered. Such agencies are classified into four categories: those that (1) establish minimum required standards, (2) currently recommend minimum standards, (3) have an open admissions policy, and (4) may recommend minimum standards. Institutional activities regarding admission standards are also covered. The information is presented in chart form as well as narrative summaries. It was found that admission standards are being reviewed and modified in half of the states. In most cases, the impetus for change apparently was emanating from the state agency level. The majority of changes in admission standards involved increasing the number of required academic courses, most often in the areas of math, science, and social science. Higher admission standards have been adopted by institutions in seven states, independent of any activity at the state level. An annotated bibliography of seven publications is included. (SW)

Identifiers—National Conference on Independent Scholarship

A 2-year project designed to identify and meet the needs of America's independent scholars is described. Project objectives were to: increase visibility and support for independent scholarship; learn more about independent scholars and their activities and organizations; identify the main problems and needs of independent scholars; stimulate greater institutional responsiveness; and encourage

self-organization of independent scholars. Vignettes of independent scholars are included that suggest that scholarship outside of academe has assumed a diversity of new institutional forms and organizational arrangements. Descriptions of 20 organizations outside academe are included. In addition, major problems faced by independent scholars are identified, including: released time, colleagueship, publishing opportunities/incentives, support service/facilities, and funding. An overview of the 1982 National Conference on Independent Scholarship is included, along with recommendations for the following groups: academe; humanities councils, foundations, and funding agencies; independent scholars and their organizations; learned societies; libraries; and the scholarly publishing community. Appendices include a list of conference participants and advisory committee members and an annotated bibliography. (SW)

Descriptors—Adult Reading Programs, *College Instruction, Developmental Studies Programs, *Evaluation Criteria, Evaluation Methods, Higher Education, *Reading Research, Remedial Programs, *Remedial Reading, *Research Methodology, Research Skills, Sampling, Statistical Analysis, *Study Skills, Teaching Methods, Validity

Issues pertaining to research on college reading and study skills programs are analyzed, based on a literature review. It is suggested that before educators can provide quality instruction, they need to differentiate practices that are conducive to learning. Evaluative criteria are needed to make such decisions, as well as to design and evaluate experimental investigations. Particularly important are the following: (1) sampling considerations, including a representative study population, randomization, analysis of covariance, and internal validity; (2) independent variables; (3) training in the teaching technique under analysis; (4) instruments that are adequately described and appropriate to the task; and (5) data analysis techniques that are appropriate for the experimental design. To bridge the gap between practice and theory, cooperative research ventures between instructors and researchers must be undertaken. It is suggested that college reading staff need to: understand the contributing role of research, develop the skills necessary for evaluating and conducting studies, and continue to seek the institutional support (release time, seed money, assistants) necessary for conducting applied research. Descriptors—College Curriculum, *College Programs, *College Role, Core Curriculum, Decision Making, Educational Assessment, Educational Demand, Educational Quality, *Evaluation Criteria, Higher Education, *Program Evaluation, Retrenchment

Identifiers—Institutional Survival, *Program Discontinuation

Program discontinuance at colleges and universities is often linked to issues of program demand and quality. However, neither low demand nor low quality is sufficient for program discontinuance without a judgment on the criterion of the centrality of the program to the institution's core mission. Colleges' retrenchment and survival mechanisms must: (1) be

selected from a wide range of possibilities that include short-, medium-, and long-term tactics; and (2) be congruent with a reaffirmed or newly-revised mission. To use the demand and quality criteria to the exclusion of centrality is to misunderstand the nature of colleges and universities. The steps ought to be: (1) recommit or revise the institutional mission; (2) design a curriculum directly related to the mission; and (3) compare the present curriculum with the ideal. In addition to the fact that consideration of demand and quality issues alone may lead to programmatically debilitating decisions, restricting programs to one institution within a region will lead to inequality of opportunity. The cost of attending an institution farther from home will keep some lower-income students out of certain programs or out of postsecondary education altogether. (SW)

Hogan, Thomas P. Hendrickson, Elizabeth

The Study Habits of Adult College Students.

Pub Date—Aug 83

Note—36p.; A project funded by the Metropolitan Life Foundation.

Pub Type—Reports — Research (143) — Tests/Questionnaires (160)

EDRS Price — MF01/PC02 Plus Postage.

Descriptors—*Adult Students, *Age Groups, *College Students, Comparative Analysis, Higher Education, Institutional Research, Interviews, Questionnaires, Student Problems, *Study Habits

The study habits of adult college students over age 25 were compared to a group of younger students at the University of Wisconsin, Green Bay. The younger students were matched with the older groups on four characteristics: sex, major field of study, semester credit load, and class standing. All 56 participants were undergraduate students (sophomores or juniors) who were registered for the fall 1982 term. The participants kept running records of their study habits, patterns, and difficulties for an academic year. In general, older and younger students showed similar patterns in terms of how much they studied, what activities were engaged in while studying, the time distribution, and places for studying. There was some evidence that older students studied slightly more per credit hour than did younger students. While the total number of difficulties encountered in studying were about the same for both groups, the character of the difficulties was noticeably different. Both older and younger students reacted very favorably to having a mixture of the age groups in their classes. Recommendations for working with adult students and suggestions for further study are offered. Appendices include interview schedules and a study log form. (Author/SW)

The effects of returning to the classroom on the self-perception of women who had been away for some time and on the perceptions of their families were studied. A self-report survey was completed by three groups of women in different educational settings: 9 graduates of a general educational development high school diploma program; 11 graduates of an applied science degree at a community college; and 11 students in a master of education program at a university. Self-esteem, spousal perception, children's perception, and estimation of marketable skills were assessed on a pre-return, post-return attitudinal scale. It was found that returning to school precipitated changes in the woman's self-perception and in her family member's perceptions of her. Gain in self-esteem was the highest overall change. Each of the three groups rated an increase in estimation of marketable skills following return to school. The majority of respondents also felt that their return to the classroom had a significant impact on their lives. A literature review, a bibliography, and a questionnaire are included. (Author/SW)

A directory of 173 doctoral dissertations in progress or completed in the early 1980s at 36 universities is presented that covers 7 areas related to the study of higher education. The directory was compiled by the ASHE Committee on Graduate Students, based on a survey of U.S. and Canadian professors of graduate programs in higher education. Each entry identifies the title of the dissertation, the author, the sponsoring professor, the university, and the date. The topical areas are as follows: organizational forms and ethos, administrative behavior and factors, policy and planning, environmental/external factors, academic processes and factors, curriculum/learning and teaching, and educational foundations. The names and addresses of authors willing to provide copies of their research proposal are included, along with a list of institutions participating in the dissertation survey. Summary data are appended on the characteristics of graduate students responding to the survey. Responses were received from 173 students from 36 universities with advanced programs in the study of higher education. Of the 173 respondents, all except three were completing requirements toward the Ed.D. or Ph.D. (SW)

Identifiers—Nursing Curriculum Project (SREB)

Five final reports on the Nursing Curriculum Project of the Southern Regional Education Board are presented. The reports include (1) RN (Registered Nursing) Education: The Basic Issues; (2) Types of RN Programs; (3) Planning and Operating an RN Program; (4) Acclimating the Novice Nurse: Whose Responsibility? and (5) Statewide Planning for Nursing. A synopsis of SREB's Nursing Curriculum Project for 1972-1981 is provided, along with an outline on the characteristics and levels of nursing practice for primary and secondary care. Specific topics include the issues surrounding career mobility and educational opportunities for RNs and the current and future need for baccalaureate nurses. Six options for RN education are discussed: advanced standing in generic programs for baccalaureate students, "RN only" programs, outreach or satellite programs, competency-based education, independent study, and directly articulated programs. Effective planning and the operation of an RN program are covered, with attention to funding, the curriculum, challenge examinations, teaching strategies, and faculty. Additional topics include: the use of a modular, individualized learning system to help new graduates on the job, and results of demonstration projects in statewide planning for nursing education. Identifiers—Southern State University AR, *Strategic Planning

Corporate strategies that can be used in continuing nursing education programs are discussed, based on the Regional Action for Continuing Education in Nursing Education project. Attention is focused on strategies employed at Southern State University (SSU). A practical planning method was used to guide the process of corporate strategy formulation in the SSU continuing nursing education program. This method, which is used by executives in medium-sized and small companies, involves six steps: record the current strategy, determine existing problems, discover reasons for the problems, consider alternatives to solve the problems, evaluate the alternatives, and choose a new strategy. Forms that will aid in data collection and financial information on the nursing programs are appended. Sixteen fact sheets on the regional project are attached. Topics include: gerontological nursing, a consortium approach to statewide assessment of continuing education needs, historical information on regional action for continuing education in nursing, program evaluation, delivery and program models, statewide planning for continuing nursing education, contracting as a means of provider survival, associate degree programs, and the continuing education unit. Descriptors—*Administrator Attitudes, Administrator Role, *College Administration, Higher Education, *Interpersonal Competence, *Interprofessional Relationship, *Leadership Styles, *Organizational Climate, Productivity

The literature on administrative style is reviewed. Attention is directed to four basic concepts of administrative style: (1) the structured, classical, traditional model; (2) the participatory or employee-involved operation; (3) a more behavioral scientific style; and (4) the situational or environmental style. These ideas are more fully described, and it is proposed that even with various definitions of management styles in the literature, the key to a productive organizational system is the type of administrative style that directs the organization, not the organization that governs the people. If the organization is too autocratic, it may be because of the attitudes of the chief administrator. Based on the literature, a profile of an effective administrator is suggested. An effective administrator communicates well; establishes clear directions; can motivate subordinates through shared participation, rewards, and morale boosting; develops and maintains an openness with employees; strives for excellence; and recognizes subordinates' behavioral patterns. Issues concerning school/college programs and the transition to postsecondary education are discussed, based on program information provided to the National Commission on Excellence in Education. A major concern was the use of time allocated for learning between ninth grade and the attainment of a postsecondary credential. The college/school programs involved time-condensed credentials, expansion of content within allocated time, college credits in high school, and similar approaches directed at the college-bound student. Another focal area was the raising of expectations through outreach and recruitment efforts. This involved a variety of prematriculation strategies designed to motivate and prepare disadvantaged, underprepared, and/or poorly counseled students for postsecondary education, to track them into demanding academic programs, and to recruit them into college. The final focal area was the development and exchange of academic personnel. These programs seek both to eliminate redundancies in the secondary and postsecondary curriculum and to enrich the content of the secondary school curriculum by using college faculty in secondary schools or through cooperative faculty development projects in specific academic disciplines. Seventeen brief descriptions of college programs are included. (SW)

Descriptors—Educational Trends, *Enrollment Trends, Futures (of Society), *Higher Education, *Inflation (Economics), Prediction, Research, *State Aid, Teacher Employment, Teacher Salaries, Trend Analysis

Identifiers—*College Costs

Trends affecting higher education and prospects based on these facts are considered, with attention to enrollment, inflation, ability to pay for college, state and local support, basic research, and employment in higher education. It is claimed that the most serious problem higher education has faced in the last decade has been inflation, not enrollment decline. Based on the number of 18- to 21-year-olds, it is suggested that 1984-1986 are the most likely years for enrollment decline. Over the last decade, academics lost comparatively more purchasing power than did workers generally, and there is currently increasing pressure to restore the purchasing power of faculty salaries. The financial difficulties families experience in paying for college are not likely to ease by much, while increased state support for higher education is likely to occur. There are some indications that higher education is in the process of losing its market share for basic research. There has been a shift in the employment structure on campus, with a growth in the employment of administrators. However, concern for the quality of education may result in the enhancement of the teaching function. (SW)

The effect of an ability-based curriculum on student development was studied at Alverno College, a liberal arts women's college. Data were obtained from 990 participants representing students, alumnae, and working professionals who were not Alverno students. Sixteen research instruments were administered to a sample of 200 students over their 4 years of study; interviews were conducted with 80 students; and intensive study was undertaken with 60 individuals when they were seniors and 2 years later when they were alumnae. In addition, 100 corporate managers and 80 nurses were studied. The following results are discussed: students learn complex abilities, students become self-sustaining learners, students identified curricular elements most important to their learning, students came to value liberal learning, students changed on measures of personal growth, changes included broad generic abilities, student learning styles changed dramatically, students developed moral sophistication, both older and younger students changed their ways of thinking, alumnae and professionals stressed the importance of both intellectual and interpersonal abilities at work, abilities function as an organizing principle for role performance and career satisfaction, and alumnae experienced competence. The need for a new agenda for higher education is discussed. It is suggested that colleges need an informed vision of the kind of people needed to transform the economy. Higher education needs to ask whether late 19th-century models of education are appropriate for educating people for a 21st-century world of global competition. Five areas that colleges should be responsive to are as follows: the connection between research, technology, and productivity; what types of experts are needed; the connection between expertise and training in high school and college; the need for retraining adult workers; and the connection between higher education and the changing nature of work. Four directions that affect the level or kind of general preparation people need pertain to: the predominance of standard type industries; the rate of growth of science and technology; the effect of technology on the nature of the work force; and the changing characteristics of the work environment. These future prospects have implications for the education agenda, including the following: there is a need to produce substantial numbers of people who can turn regular industries into productive enterprises; managers and workers are needed who will promote technological change; and educational requirements must correspond to the need for technologically-literate workers. Descriptors—Computer Assisted Instruction, Computer Oriented Programs, *Educational Change, *Educational Technology, *Elementary Secondary Education, *Futures (of Society), *Microcomputers, *Postsecondary Education, Prediction

Predictions about the use of new technologies in education are discussed, along with 10 mistakes that many higher education practitioners are likely to make. Events predicted to occur by 1985 include the following: 80 percent of all secondary and postsecondary students will own their own computers; 20 percent of all postsecondary faculty, 25 percent of all secondary faculty, and 30 percent of all elementary faculty will own their own computers; 60 percent of all students in grades 1-8 will be regularly using computers at home, in school, or both; and 40 percent of all postsecondary students and 20 percent of all postsecondary faculty will be regularly using word processors. Predictions by 1987 are also included. The mistakes that are projected include the following: higher education will probably continue to emphasize larger, institutionally-owned technologies as opposed to the new personal technologies; colleges will wait too long to adopt the new technologies; it will be required that everyone learn a computing language (rather than how to use the new technologies); the impact on the educational organization will not be anticipated; too many students will be steered to technology fields; faculties will continue to be organized around disciplines, the teaching of facts, and grading based on factual acquisition; and the use of computers as tutors will be overemphasized. Taking Stress in Stride: How Do College Administrators Cope?

American Association for Higher Education, Washington, D.C.

Pub Date—Dec 83

Note—5p.

Journal Cit—AAHE Bulletin; v36 n4 p11-14 Dec 1983

Pub Type—Journal Articles (080) — Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Administrator Attitudes, *College Administration, *Coping, Goal Orientation, Higher Education, Mental Health, Psychological Patterns, Relaxation Training, *Stress Variables, Well Being, *Work Attitudes

The causes of stress for college senior-level administrators and their coping approaches were studied, based on discussions with 60 administrators from 44 institutions in the United States and England. Four sources of stress were identified: stress from the general environment, stress from job-related but external sources, stress from internal and/or psychological sources, and stress stemming from student encounters. The administrators adopt an attitude of reality acceptance toward the external dimensions of stress, be they general to the environment (e.g., wider political or social developments), or higher-education related but external to the institution (e.g., a state regulation or collective-bargaining contract). It is the internal/psychological and student-related stressors that they attempt to address. Six types of coping mechanisms include: development of a healthy lifestyle, development of personal and professional support systems, adoption of effective time management techniques, perception of change as challenge, development of a stress game plan, and development of a positive attitude. Developing a healthy lifestyle alone does not eliminate stress, but it helps people cope and provides a base for further strategies. Developing a positive attitude toward life and work is recognized as the best strategy for dealing with stress. (SW)

Identifiers—Brown University RI, Carnegie Mellon University PA, Colorado State University, Massachusetts Institute of Technology, Milwaukee Area Technical College WI, University of Illinois, University of Maryland

Papers on the acquisition and use of computers and telecommunications systems by colleges and universities are presented ("Information Technology: Instruction Is the Issue—An Introduction"; "The 'Star Wars' Universities: Carnegie-Mellon, Brown, and M.I.T."; and "Instruction and the Computer"). The first section describes developments at Carnegie-Mellon University, Brown University, and the Massachusetts Institute of Technology, which all have large investments in information technology. While the level of investment involved is too high for most colleges, the experiences of these three universities may be valuable to others, particularly with respect to issues of institutional planning and management. Ways that computers might be used to improve teaching and learning are also considered, based on proposals funded by the Fund for the Improvement of Postsecondary Education. Applications of the computer to instruction include: using computer simulations of light sources and detectors to introduce the beginner to optics at the University of Maryland, incorporating microcomputers into the curriculum at Colorado State University, the use of computers with hypertext-based systems at the University of Illinois, and Milwaukee Area Technical College's proposal to develop a new resource center and curriculum to support the needs of automation and manufacturing and metal working industries. Descriptors—Career Counseling, *Career Education, *College Programs, Curriculum Development, Economic Factors, *Faculty Advisers, Higher Education, *Humanities, Internship Programs, *Liberal Arts, Program Descriptions, Teacher Role

Five articles that address the merger of liberal learning and career preparation at the college level are presented, along with brief descriptions of 64 career preparation programs for liberal arts students, and an annotated bibliography of 33 documents in the ERIC system on liberal learning and career education. Article titles and authors are as follows: "Liberal Learning and Career Preparation: An Introduction" (Mary Ann F. Rehne); "The Economy and the College Student" (W. Ed White-law); "Careers, Competencies, and Liberal Education" (H. Bradley Sagen); "Creating a Career Preparation Program: A Political Approach" (John J. Agria); and "Career Advising for Liberal Arts Students: Faculty Roles" (David R. Hiley). Considerations in these articles include the following: how the humanities can best prepare college students to meet the demands of the economy; the use of career counseling, internships, and curricular changes to integrate liberal learning and career preparation; considerations in creating career preparation programs; and faculty roles and responsibilities in career advising for liberal arts students. The program descriptions include the name and address of the program's contact person. (SW)

Data and narrative information on degrees con-
ferred by Connecticut colleges and universities in
1982-1983 are presented. Information is also pre-
sented on degrees conferred by discipline, level, gen-
der, and minority status. Trends include the fol-
lowing: 26,712 degrees were conferred in
1982-1983 by Connecticut colleges; the total num-
ber of degrees conferred was up in the independent
sector but down in the public sector; in comparison
to 1981-1982, the number of awards in engineering
grew the most, followed by business and manage-
ment; the largest decline was in education; in the
same 1-year period, the discipline showing the large-
est rate of growth was computer and information
sciences; the largest rate of decline was in library
science, followed by education; the number of bachel-
ors degrees conferred declined slightly from 1
year earlier; women received over half of all awards
at the master's level and below, and one-third of all
degrees at the doctorate and first-professional lev-
els; minority students received 6.3 percent of all
awards in 1982-1983, up from 5.6 percent in
1980-1981; and minorities were best represented at
the first-professional level, receiving 8.2 percent of
all such awards in 1982-1983. (SW)

Graduate Studies, Higher Education, Job Appli-
cation, *Majors (Students), Relevance (Educa-
tional), Student Characteristics

Identifiers—Canada, *Ontario

Results of a survey of 1982 graduates from On-
tario, Canada, universities are presented. Informa-
tion was collected on demographic and background
characteristics of the graduates, degree level, major,
type of program, decisions for further education,
job-search procedures, employment experiences,
employment status, initial and subsequent occupa-
tional choices, starting and current salaries, job sat-
isfaction, migration, and parents' education. The
educational qualifications of holders of 3-year bachel-
or's degrees did not appear to relate very closely to
their jobs, while the qualifications of recipients of
1-year Bachelor of Education and first professional
degrees did appear to relate closely to their jobs.
Graduates in fine and applied arts, humanities, and
social sciences had less success in translating their
educational qualifications into jobs in their fields,
while those in health professions and occupations did
well in this regard. Those in engineering and
applied sciences did well on several measures of job
relevance. The unemployment rate in spring 1983
was 12.7 percent for male graduates and 9.3 percent
for female graduates. Approximately 21 percent of
the 1982 graduates were enrolled as full-time stu-
dents. (SW)

lege Presidents

Developments in education, employment, and the
courts concerning the status of women are covered
in these two newsletter issues. Topics include the
following: sexual harassment at colleges and univer-
sities, attitudes toward women on campus, campus
rape, the scope of coverage of Title IX, sex bias
rulings, the Reagan Administration's position on the
Women's Educational Equity Act Program, testimo-
ny concerning the effect of the Equal Rights
Amendment on higher education, scholarships for
older students, the Equal Pay Act, salary differences
between female and male faculty, antidiscrimination
laws pertaining to not hiring women because of
pregnancy, enrollment trends for minorities, the cli-
mate for women students outside the classroom,
women and science, developments concerning
black women in academe and the professions, con-
ferences on black studies/women's studies, a direc-
tory of Hispanic women in psychology, resources
for integrating the study of women into the college
curriculum, women's studies programs, resource
materials on women and careers, research on
women through a national network, a bibliography
on women and employment, a job rights guide for
women, a program of student research on women,
and sexism in the media. The Fall issue includes an
editorial by Judy Mann on the Reagan Administra-
tion's actions affecting women. A letter about sexual
harassment from a Harvard University dean to fac-
ulty members is included in the Winter issue that
considers the teaching environment and certain dif-
ficulties that can arise between instructors and stu-
dents collectively, possible difficulties in the
relationships between individual instructors and
students, and kinds of faculty behavior that will pro-
duce formal disciplinary action. (SW)

Identifiers—United States

An annotated bibliography of more than 1,100
scholarly publications concerning the financing of
American higher education during 1960-1981 is
presented. The greatest emphasis is on works pub-
lished in the last decade, including books, articles,
reports, studies, and theses on paper or microform.
The following topics representing financial con-
cerns and questions are addressed: the political
economy of American higher education; institu-
tions, programs, and coalitions; human resources;
and research, planning, and policy development.
Specific topics include: higher education costs, ben-
efits, and outcomes; federal and state aid; private
philanthropy and fund raising; budgeting at the state
and institutional levels; financial issues at private
versus public institutions; financial issues affecting
graduate and professional education; state master
planning; faculty and staff compensation and ben-
efits; faculty unions and collective bargaining; faculty
workloads; tuition and student aid; physical plant
operations; enrollment projections, price indexes
and costs analysis; and retrenchment. In addition to
the annotated entries, a foreword by John D. Mil-
lett, a list of additional sources of information, an 1
list of higher education financial data sources are
provided, along with author and subject indexes.
ERIC accession numbers are cited where applica-
ble. (SW)

Teacher Retirement, Tenured Faculty Identifiers—Bankruptcy, Debt (Financial)

Perspectives concerning the effective use of a small college's resources and assets in a time of declining government support and decreasing enrollments are presented. Attention is directed to improving cash flow, staff reduction and early retirement, external sources of long-term financing, college financial student aid, and managing real estate assets. Specific topics concerning cash flow include: renegotiation of debt payments to the federal government, enrollment decline and debt refinancing, application of reserve accounts and substitution of collateral, reorganization under Chapter 11 of the Bankruptcy Code, cooperation and cost effectiveness, reducing health insurance costs, and income from intangible assets. Additional topics include: financial exigency and termination of tenured faculty, early retirement incentives, midcareer transition programs, phased or gradual retirement programs, financing energy conservation measures, state agency financing and industrial revenue bonds, industrial revenue bonds, tuition pricing and student financial aid, cash-flow sacrifice and student aid, external sources for student loan financing, income producing options for surplus facilities, alternate use of federally-financed facilities, and unrelated business income and tax-exempt status. Shaw, Rebecca Cramer, Don G.
A Theoretical Model of Student-Faculty Interactions.

Pub Date—[84]

Note—22p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—College Environment, Higher Education, Models, Self Esteem, Student Attitudes, Student Characteristics, *Student College Relationship, *Student Participation, *Student Teacher Relationship, Undergraduate Students. Student characteristics related to out-of-class interactions with faculty were studied. Interviews with 26 undergraduate students focused on the following topics: students' college and life goals, interpersonal relationships, relationships with faculty, undergraduate activities, self-image, approach to education, and feelings about college. A grounded theory approach was used to discover several categories and properties associated with students' patterns of interaction with faculty. These categories were used to develop a theoretical model that predicts and explains students' frequency and type of interaction with faculty. From this model, a more general theory was developed that can be generalized to other college environments. This theory explains students' patterns of interaction with faculty in terms of three main variables: self-esteem, perception of the environment, and involvement in college life. It was found that the more involved students are in all aspects of the college, and the more positively they perceive themselves and the college environment, the more likely they are to seek informal, out-of-class interactions with professors. Teach, Renato

Adult Learners as Perceived by Their Faculty.

Pub Date—Feb 84

Note—10p; Paper presented at the Annual Meeting of the California Educational Research Association (Los Angeles, CA, November 1983).

Pub Type—Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Academic Achievement, *Adult Students, *College Faculty, External Degree Programs, Failure, Graduate Students, Higher Education, Role Perception, *Student Characteristics, Student Teacher Relationship, *Success, *Teacher Attitudes.

The first phase of a longitudinal study conducted at the Fielding Institute investigated the circumstances or characteristics that lead to success for adults in an external graduate degree program, based on interviews with 16 faculty members. Respondents were given a set of cards naming students they knew well. The faculty sorted the cards into groups according to some dimension of student similarity, with the first sorting to be based on a vaguely described criterion of "academic performance." Groups were usually arranged along a continuum from negative to positive, permitting inferences about characteristics considered desirable or undesirable. Faculty interpretations of "academic performance" differed; a list of these interpretations is appended. The second sorting was based on the criterion that first came to mind, which was hypothesized to be connected to what is most important to the interviewee. Descriptions of those criteria are also appended. Preliminary analysis confirmed that patterns existed in the way faculty perceive their students. Four clusters of student characteristics seemed most important to faculty: (1) a productive, rich, and well-organized intellectual life; (2) compatibility in style with the faculty member; (3) self-directedness and ability to use all available resources; and (4) professional competence. Descriptors—College Programs, *Compliance (Legal), *Court Litigation, *Federal Aid, Government School Relationship, Higher Education, Legal Responsibility, *Sex Discrimination, *Student Financial Aid.

Identifiers—Grove City College PA, *Grove City College v. Bell, *Supreme Court, Title IX Education Amendments 1972.

The text of a Supreme Court case that determined whether Title IX of the Education Amendments of 1972 applies to Grove City College is presented. The opinion was written by Justice White. Title IX prohibits sex discrimination in educational programs or activities receiving federal financial assistance, and stipulates that assistance to a program be terminated when noncompliance is found. Grove City College accepts no direct assistance but enrolls students who receive federal grants that must be used for educational purposes. It was held that Title IX coverage is not foreclosed merely because federal funds are granted to the students rather than to

the college's educational programs. However, the receipt of federal student financial aid by some of the college's students does not trigger institution-wide coverage under Title IX. In purpose and effect, federal student aid represents financial assistance to the college's own financial aid program, and it is that program that may be regulated under Title IX's nondiscrimination provision. The fact that federal funds eventually reach the college's general operating budget cannot subject it to institution-wide coverage. A refusal to execute a program-specific assurance of compliance warrants the department's termination of federal assistance to the student financial aid program. (SW)

The Utility of HEGIS Data in Making Institutional Comparisons. Postsecondary Education Research Reports.

Maryland State Board for Higher Education, Annapolis.

Pub Date—30 Aug 83

Note—13p.

Available from—Maryland State Board for Higher Education, 16 Francis Street, Annapolis, MD 21401.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Comparative Analysis, *Degrees (Academic), *Educational Finance, Enrollment Trends, Higher Education, Institutional Characteristics, *National Surveys, Records (Forms), *Statistical Data, Teacher Salaries.

Identifiers—*Higher Education General Information Survey, Maryland, *Peer Institutions.

The utility of data from the Higher Education General Information Survey (HEGIS) in making institutional comparisons between Maryland institutions and peer institutions is discussed. The Maryland State Board for Higher Education makes institutional comparisons as part of its studies on peer institutions. Information is provided on differences among states and among institutions in reporting on four of the HEGIS forms: finance, faculty salaries, enrollment, and degrees-awarded. Attention is directed to the following problems of comparability with HEGIS data: universe definition, funding differences, and reporting problems. The analysis is based on discussions with representatives from California, Illinois, Michigan, North Carolina, Texas, Virginia, Wisconsin, and Maryland. The majority of problems were related to the HEGIS finance forms. However, the problems associated with the use of HEGIS data in comparing institutions do not negate the use of HEGIS data. Suggestions are offered for changing the instructions to the HEGIS finance form to enhance the usefulness of information for researchers and others using these data. (SW)

Descriptors—Academic Aspiration, *Bachelors Degrees, College Attendance, *College Graduates, *Education Work Relationship, *Employment Experience, Employment Level, Followup Studies, *Graduate Surveys, Higher Education, Occupational Aspiration, Questionnaires, State Colleges.

Identifiers—*Maryland.

Results of a survey of 1981 bachelor's degree recipients at Maryland's public four-year institutions, which was conducted about 1 year after graduation, are presented. Information is provided on post-graduation educational activities, their employment and occupational status, and their achievement of goals. Findings include the following: 57 percent of the respondents graduated from the same school where they first entered, 25 percent had transferred from a two-year institution, and 18 percent had transferred from another four-year school; 79 percent of the respondents planned to complete a higher degree; three-fourths of the graduates were employed full-time and 13 percent were employed part-time; 84.6 percent of the full-time employed

graduates were working in professional or technical occupations; 91 percent of respondents who were employed full-time had obtained their jobs within 8 months of graduation; half of the respondents working full-time reported that their job was directly related to their undergraduate majors, while another 30 percent said that it was somewhat related; and the median salary reported by graduates employed full-time was \$15,689. Statistical results and the survey instrument are included. (SW)

Access to Student Loans. Hearing before the Subcommittee on Education, Arts and Humanities of the Committee on Labor and Human Resources, United States Senate, Ninety-Eighth Congress, First Session.
Congress of the U.S., Washington, D.C. Senate Committee on Labor and Human Resources.
Pub Date—20 Sep 83
Note—103p; Some pages may not reproduce well due to small print.

Pub Type—Legal/Legislative/Regulatory Materials (090)

EDRS Price - MF01/PC05 Plus Postage.

Descriptors—Access to Education, Accountability, *Agency Role, *Banking, Capital, *Competition, *Credit (Finance), *Financial Needs, Hearings, Higher Education, Law Schools, Private Agencies, Public Agencies, *Student Loan Programs
Hearings are presented on the proliferation of interstate guarantee arrangements in the area of student loans, and the effect of such arrangements on student access to loan capital. Topics include: the desirability of establishing territorial monopolies for student loan guarantee agencies, the views of the Higher Education Assistance Foundation and the United Student Aid Funds organization concerning the proposal to prohibit lending or guaranteeing loans across state borders, views on Utah's Law School Assured Access Program, and results of a study of the coordination of interstate activities in lending and loan guaranteeing. A primary concern of the hearings is whether state guaranteed agencies are meeting the borrowing needs of students, as specified in the Higher Education Act. Questions are raised concerning public accountability of private lenders, whether better services could be provided to the public through multiple guarantors in a state, and whether new proposals would erode participation by the smaller size lender. Additional topics include participation by United Negro College Fund colleges in the Citibank higher education assistance foundation program, and the role of the Law School Admissions Council in assuring that students accepted to law school will have the resources to attend. Descriptors—*Academic Persistence, *Athletes, Athletics, College Graduates, *College Students, *Eligibility, Federal Legislation, Hearings, Higher Education, Organizations (Groups), *Public Policy, Recruitment

Identifiers—*College Athletics, *Professional Athletics, *Proposed Legislation

Hearings are presented on the Collegiate Student-Athlete Protection Act of 1983, a bill designed to encourage college student-athletes to complete their undergraduate education before becoming professional athletes. This legislation addresses the relationship between professional sports league eligibility rules and the antitrust laws. The eligibility requirements are based on elapsed time from high school graduation. The legislation makes clear that professional sports leagues and associations have the legal authority to promulgate rules regarding recruiting and eligibility without being faced with antitrust charges. The proposed legislation was prompted by the signing of the University of Georgia's football star, Herschel Walker, by a member team of the United States Football League. The scope of the hearings is confined to the public policy issue of whether antitrust laws should bar profes-

sional teams from policing themselves. The effect, however, is a broader public policy issue—whether college athletes will, at the least, be free from pressure to abandon their education. While Congress cannot force athletes to follow this course, it can provide the most favorable environment for doing so. Witnesses include representatives of professional leagues and associations, athletes, and a sports attorney. (SW)

Identifiers—*Atlanta University GA

A project to expand the participation in research by the education faculty of the member institutions in the Atlanta University Center is described. The primary objective was to provide an opportunity for black scholars to participate in research with emphasis on issues confronting black communities in the 1980s. The focus was to enhance the research skills of the scholars and to create a positive climate to promote research activities. Five research teams were organized, with a total of 13 faculty members and eight students. In addition to team research activities, six seminars/workshops were sponsored. A 90 percent participation level by faculty and students was achieved. Outcomes of these activities include the following: four proposals were written and submitted to outside agencies for funding; participants took part in faculty development activities (e.g., postgraduate courses) for the purpose of enhancing their research skills; one participant presented a paper at a national conference on blacks in higher education; the faculty retreat research activity has been institutionalized; and a new curriculum for preparing teachers has been instituted. Information on seminar topics and presenters as well as the work agenda and participants of the research teams is appended. (Author/SW)

EDRS Price - MF01/PC05 Plus Postage.

Descriptors—Academic Persistence, Associate Degrees, Bachelors Degrees, *Black Students, Comparative Analysis, *Degrees (Academic), Doctoral Degrees, Education Work Relationship, Geographic Regions, Higher Education, *Majors (Students), Masters Degrees, National Surveys, Private Colleges, Race, State Colleges, Trend Analysis, *White Students

Identifiers—United States, *United States (South)

Information on U.S. degrees awarded nationwide and in the South in 1980-1981 and data on degree completions and fields of study for black students are presented, based on results of the Higher Education General Information Survey (HEGIS). Data are provided on the number of degrees awarded in 1980-1981 in the major HEGIS fields, at each level of degree, by race, for public and private institutions in the United States, the Southern Regional Education Board region (SREB), and each of the 14 SREB states. Tables show data for first professional and associate degrees in a similar format. A narrative description of trends is included. Highlights include the following: the number of students receiving degrees in higher education is increasing at a higher pace in the South than in the rest of the country, at both the baccalaureate and master's levels; there have been significant increases over the last 10 years

in the number of degrees students are earning in the fields they perceive as offering the best job opportunities, specifically business and management and the health professions; and the number of black students receiving degrees reflects uneven progress of blacks in higher education, with only slight increases at the associate, baccalaureate, and doctoral levels, and a decline at the master's level. Identifiers—North Carolina, Tennessee, Texas (Houston), *United States (South)

Proceedings of the 1983 annual meeting of the Southern Regional Education Board (SREB) are presented. Contents include a roundtable discussion, nine papers, a progress report by the SREB's Task Force on Higher Education and the Schools, a presentation on a SREB report on higher education and high technology economic development, a summary of the overall meeting, a meeting agenda, a roster of participants, meeting minutes, the president's report, and minutes of the SREB executive committee meeting. Recommendations are offered concerning: raising high school academic standards and graduation requirements, raising college admissions standards, improving teacher selection, teacher education and certification; mathematics and science education; and vocational education. The text of a roundtable discussion on programs to improve quality and provide new incentives for teachers is provided, along with a summary of the project "Meeting the Need for Quality: Action in the South." Additional contents address the following topics: the Tennessee Master Teacher Program, the Charlotte-Mecklenburg School Plan, the Houston Independent School District Plan, the role of universities, the state role, institutional and state responses to challenges of high technology, and skills for the work place. Identifiers—Sweden, *United States

Perspectives concerning "research about research" are summarized, based on symposia sponsored by the University of Göteborg in Sweden. It is noted that studies of science, technology, and society (STS) are prevalent in several countries during the 1970s. Based on visits to STS programs in the United States, it is suggested that there are different antecedent contexts and fields of activity for research about research. One end of the spectrum is represented by humanities (e.g., Stanford University's "Man, Technology and Human Values" program). At the opposite end of the spectrum are studies in engineering or at faculties of jurispru-

dence and medicine. In the middle of the same spectrum are a concentration of studies of the social aspects of science and technology, together with decision-making problems (e.g., arms control questions). In Sweden, the colloquia generated the idea of establishing a center of research about research, based on a number of emergent projects, which are briefly described. It is concluded that the colloquia helped to impart some stability to a new research field, both by facilitating the development of knowledge surveys and by establishing international research contacts. Descriptors—*Academic Achievement, *College Transfer Students, *Comparative Analysis, *Grade Point Average, *Higher Education, *Institutional Research, *Performance, *State Universities

Identifiers—*Georgia State University, *Georgia University System

Patterns of student transfers and performance indicators among selected institutions of the University System of Georgia were studied. Attention was focused on differences in performance as measured by grade point average (GPA) between students leaving one institution for another system institution, and correspondingly of students transferring into a given institution from an institution within the system. Findings include the following: Georgia State University was the strongest magnet for attracting transfer students from most institutions in the Georgia University System, and the University of Georgia served a less strong role as a magnet institution; students who transferred from Georgia State, Georgia Institute of Technology, Kennesaw College, and West Georgia College tended to have higher GPAs after transferring to another system institution; students across system institutions generally lowered their GPA at Georgia Institute of Technology; students who transferred to Georgia State and the University of Georgia often tended to receive lower grades; and students transferring to Kennesaw College and West Georgia College frequently received higher grades after the transfer. A brief review of the literature is appended. (SW)

Descriptors—*Academic Freedom, *Accountability, *Constitutional Law, *Governance, *Government School Relationship, *Higher Education, *Institutional Autonomy, *Legal Responsibility, *State Government, *State Legislation, *State Universities

Identifiers—*University of Hawaii

The relationship of the University of Hawaii and its governing board to the state government, specifically the legislature and its major executive departments, was assessed with attention to institutional autonomy and the protection of academic freedom. Major findings of the review include the following: a 1978 constitutional amendment appears to give autonomy to the University of Hawaii and its board of regents; while university autonomy and social accountability appear to be inherently contradictory, in practice both concepts must be made compatible; the lay governing board is the solution to the dilemma of university autonomy versus social accountability, since the boards provide a mechanism for social accountability while serving as buffers against improper outside interference; the 1950 constitutional convention created the University of

Hawaii as a body corporate; the 1978 constitutional covenant granted the regents exclusive jurisdiction over the internal organization and management of the university; there are still many statutory conflicts with the board of regents' constitutional authority; attempts to implement the amendment by legislation have been largely futile; and the university and its regents must take the initiative to secure the institution's constitutional independence from state government interference. Tauber, Robert T.

Cheating and Plagiarism: Matters beyond a Faculty Member's Right to Decide!

Pub Date—30 Jan 84

Note—27p.; Paper presented at the Annual Meeting of the National Association of Teacher Educators (New Orleans, LA, January 30, 1984).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150) — Tests/Questionnaires (160)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Cheating, *Codes of Ethics, *College Faculty, *College Students, *Discipline Problems, *Due Process, *Higher Education, *Legal Problems, *Plagiarism, *Punishment, *Questionnaires, *Teacher Responsibility

The issue of whether cheating and plagiarism should be categorized as an academic evaluation or disciplinary misconduct is discussed. It is claimed that if these offenses are categorized as disciplinary misconduct, students are entitled to some due process. However, if cheating and plagiarism are classified as academic evaluations, students are entitled to little, if any, due process. The courts may enter the picture if it can be shown that the actions of the school, including actions of faculty as agents of the institution, are clearly unreasonable, arbitrary, or capricious. Allowing faculty the right to judge what is cheating or plagiarism is a problem that is further complicated when faculty are also given the right (responsibility) to decide what sanction or punishment is appropriate. It is suggested that if cheating and plagiarism are examples of code of conduct breaches, all such cases should go before a hearing board. These offenses would then be matters beyond an individual faculty member's right to decide. A questionnaire about what qualifies as cheating and a "Cheating Quiz" are appended. (SW)

Identifiers—*Maryland, *Mission Statements, *University of Maryland

The extent to which Maryland postsecondary institutions are fulfilling major mission statements is reviewed, by campus, and 5-year program plans are presented. In addition, information is presented on enrollments, programs, finance, facilities, faculty, libraries, and computer services. The admission criteria implemented by the public four-year institutions are identified, along with statistical profiles of the entering classes for 1979-1983, and retention rates for 1977-1981. Data are also presented on the percentages of lower-division students for each of the past 5 years, trends in new community college transfer students, graduate enrollment trends, and contracts and grants received at University of Maryland campuses. For each campus, information is provided on degrees to be offered and academic programs planned for the future. Additional data covers: the number of new full-time freshmen in Maryland institutions since 1980, enrollment projections, trends in part-time graduate enrollments, and the college plans of public high school seniors. Recommendations are offered on areas such as: private support for public colleges, state support for

private colleges, tuition, student financial aid, budgeting, and capital projects. (SW)

Baker, Michael E.

The Use of Standards and Comparative Space Data for Space Allocation.

Pub Date—21 Feb 84

Note—15p.

Pub Type—Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Building Plans, *Campus Planning, *College Buildings, *College Programs, *Comparative Analysis, *Departments, *Educational Facilities Planning, *Evaluation Criteria, *Higher Education, *Space Classification, *Space Utilization, *Standards

The use of space standards and comparative space data in university space allocation processes are examined. Current space standards and space utilization measures are reviewed. The relationship of space allocation to other research topics and to university decision-making processes is also addressed. The following methods of space comparison are covered: professionally-developed space standards, inter-university or external data, and intra-university or internal data. Concerns regarding the implementation of space comparisons include: a campus space inventory, the use of computer retrievals, and types of analyses (e.g., review of all space within a building, review of types of space). Two space allocation goals for research universities are proposed: provide appropriate support for educational, research, or support activities; and utilize space effectively. In addition, five criteria are suggested to evaluate how well specific space allocation proposals achieve these goals. It is suggested that space needs of different academic fields differ substantially. Some standards can be uniform university-wide, while others must vary by academic field. In using space standards to estimate space requirements for a program, it is better to limit the estimate to the total net square feet required. (SW)

Identifiers—*Civil Rights Act 1964 Title VII, *Title IX Education Amendments 1972

The major legal issues pertaining to academic employment are examined. Four areas affecting higher education are analyzed in depth: employment practices, equal pay, developing issues under Title IX of the Education Amendments of 1972; and financial exigency. In addition, guidelines for evaluating current institutional academic employment practices are provided. Specific attention is directed to the order of proof and the burdens of proof for both plaintiffs and defendant colleges in academic Title VII (Civil Rights Act of 1964) cases; the general attitude of the federal courts toward employment discrimination litigation involving colleges; how courts review decision-making procedures and criteria in academic Title VII cases; statutes used by college faculty to challenge alleged salary discrimination and the kind of proof each party must provide; cases brought against colleges under these statutes; problems involved in creating or modifying salary policies; trends in judicial review of salary

politics at colleges; the provisions and history of Title IX, recent federal cases, and regulations establishing a college's responsibilities under this law; and the case law on financial exigency and institutional prerogatives and obligations to faculty. An 11-page bibliography of cases, statutes, books and periodicals is included. (SW)

Descriptors—Automation, Computer Oriented Programs, *Computer Programs, *Flow Charts, Guidelines, Program Descriptions, *Programming, *Programming Languages

Identifiers—BASIC Programming Language

This document describes BASCHART, a computer aid designed to decipher and automatically flow chart computer program logic; it also provides the computer code necessary for this process. Developed to reduce the labor intensive manual process of producing a flow chart for an undocumented or inadequately documented program, BASCHART will automatically produce an annotated flow chart for any program that uses WANG (MVP) BASIC-2 programming language. The development of the BASCHART program is summarized, and the hardware requirements are described. A user's guide includes operating procedures and an example of a program flow chart. Three appendices provide (1) a system diagram showing the interrelationships between the program subsystems and a listing of the subroutines with brief descriptions of their purpose; (2) definitions of the BASCHART alphanumeric variables; and (3) the WANG BASIC-2 computer code for the flow charting program. A Study to Determine the Presence of Observable Conditions of Positive Self-Concept in Elementary School Media Centers.

Pub Date—Dec 81

Note—320p.; Ph.D. Dissertation, University of Wisconsin-Madison.

Pub Type—Dissertations/Theses - Doctoral Dissertations (041)

EDRS Price - MF01/PC13 Plus Postage.

Descriptors—Cooperation, Diaries, Educational Media, Elementary Education, Elementary School Students, Interviews, *Learning Resources Centers, *Library Facilities, Library Research, *Media Specialists, Observation, *School Libraries, School Visitation, *Self Concept, Success

Elementary school instructional media centers (IMC) were studied to determine the presence or absence of six conditions identified as promoting positive self-concept: cooperation, independence, success, positive atmosphere, challenge, and a feeling of value or acceptance. Following a review by a panel of experts of a preliminary observation sheet of activities and physical settings, a preliminary survey instrument, and interview questions for students and media specialists, these conditions were investigated during 1-week study periods in each of three Wisconsin elementary school IMCs representing rural, urban, and suburban communities. The schools chosen had a full-time media specialist, a full-time aide, a variety of current printed and audiovisual materials, and a program of activities and services. Research methods included observation, interviews with students and media specialists, and diaries. Results indicated that the conditions of independence, cooperation, and success were observable. Students found the IMC atmosphere to be positive, felt valued, had many experiences with and opportunities for success, cooperated naturally, and found the IMC to be a challenging area. A five-page reference list and 83 tables are included, as well as 17 appendices containing the survey instrument and

related documents. (LMM)

EDRS Price - MF01/PC08 Plus Postage.

Descriptors—Cataloging, Citations (References), *Computer Programs, Databases, *Display Aids, Foreign Countries, Indexing, *Information Dissemination, *Information Needs, *Instructional Materials, Literature Reviews, Needs Assessment, Online Systems, Specifications

Identifiers—Canada, Software Evaluation

A project which involved an intensive search of the literature and contacts with individuals in the field concerning the dissemination of information about educational software is described. Included are an analysis of education software information available to educators, a needs assessment of Canadian educators, and the generation of an implementation plan designed to make the two more congruent. Problems inherent in the collection, organization, and dissemination of information about educational software are addressed, and a structure is suggested for effectively accomplishing these activities. The introduction to the report describes the research methods used and provides definitions of terms, a summary of the educational software situation, a definition of the problem, and an outline of the project. A summary of the research analyzes results related to (1) library and vendor cataloging; (2) indexing: library, print, catalog, ERIC, and PRECIS; and (3) delivery systems: decentralized versus centralized systems, MARC format, computers and library procedures, options, online databases, history of nonprint databases, FORMAT/UTLAS, and database design. A discussion of standard description includes problems, suggested fields, and sample display formats. An implementation plan and recommendations conclude the report. Thirteen figures are included, and a summary of the computer cataloging and indexing survey is attached. (LMM)

Identifiers—Europe, Two Way Television, *UNESCO

This document provides summaries of the conference organization, opening speeches, election of the chairperson, 4 presented papers and 11 contributions, conclusions, and recommendations. The following papers are presented in full in the appendix: (1) "Design and Production of Educational Materials for the Modernization of Teacher Training in the Szombathely Teacher Training College" by Sandor Orosz; (2) "Notes on Educational Technology and the Use of Videotechniques in Teacher Education in Sweden" by Christer Brualing; (3) "The Use of Educational Television in Teacher Training in the European Socialist Countries through the Example of the German Democratic Republic" by Hans-Georg Heun; and (4) "Main Trends in Educational Tech-

nology and the Use of Video Technique in the West European Countries" by Walther Ziffreund. Additional contributions (also appended) examine the following topics: television notes in educational science; the electronic classroom of the Maribor Pedagogical Academy; analysis of critical incidents in teaching; use of audiovisual techniques and educational technology in the classroom and in teacher training; unification of methods and educational technology for teacher training and inservice training with video techniques and computer systems; developing pedagogical abilities using video at the Szombathely teacher training college; the instructor experimental program for developing pedagogical abilities with video in vocational training; using the videorecorder in teaching didactics; use of videorecordings in higher education and teacher training in East Germany; and use of technology in the training of future teachers. The Implications for the Open University of Recent Cable and Satellite Developments. A Discussion Paper.

Pub Date—[83]

Note—102p.; Appendices may not reproduce clearly due to use of colored paper.

Pub Type—Opinion Papers (120) — Reports - Evaluative (142)

EDRS Price - MF01/PC05 Plus Postage.

Descriptors—Cable Television, *Delivery Systems, Distance Education, *Educational Television, Foreign Countries, Information Networks, Institutional Cooperation, *Open Universities, Postsecondary Education, Program Development, Program Implementation, *Programming (Broadcast)

Identifiers—United Kingdom

Designed to raise awareness of the implications of cable television and satellites for the Open University, this paper indicates why cable television developments will affect the university and the wide range of university people and departments who will be affected by such developments. Four main issues that the university will have to deal with are addressed: (1) general educational potential of cable and satellite technology; (2) Open University policy issues; (3) national policy and the Open University's possible involvement in influencing national policy; and (4) how the Open University might develop its policies. The issues are further developed by appendices covering the following topics: setting the scene; history of cable in the United Kingdom (UK); technical details of cable and satellite television in the UK; general educational potential of broadband cable technology; relative advantages/disadvantages of broadband cable over other video technologies; broadband cable and interactivity; possible Open University programming initiatives; an Open University educational channel; regional implications; and collaboration with other institutions. Apple (LCSI) LOGO vs. MIT (Terrapin/Krell)

LOGO: A Comparison for Grades 2 thru 4.

Pub Date—May 83

Note—10p; Best copy available.

Pub Type—Reports - Evaluative (142)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Comparative Analysis, Elementary Education, *Evaluation Criteria, Grade 2, Grade 3, Grade 4, Guides, Information Storage, Man Machine Systems, Media Selection, *Microcomputers, Programming, *Programming Languages, Screens (Displays), Vocabulary

Identifiers—Debugging (Computers), *LOGO Programming Language

Two LOGO dialects are compared for appropriateness for use with second, third, and fourth grade students on the basis of 18 months of experience with teaching LOGO programming language at this level in a four-machine laboratory setting. Benefits and drawbacks of the dialects are evaluated in the areas of editing, screen modes, debugging, vocabulary, instruction manuals, typing and syntax simplicity, automatic retyping, speed of drawing, ability to save and load binary picture files, remark facility, and workspace management. Specifically discussed are the MIT 'TRACE' and 'SAVEPICT/READPICT' commands and the Apple 'PACKAGE' and 'BUY' commands. The Apple and MIT LOGO programs are then rated using the criteria named above and a factor weighting system. The MIT Program is more highly rated overall, though the Apple program is rated higher on screen modes, extent of primitive vocabulary, the 'BURY' command, automatic retype (for CONTROL Y), and speed of drawing. It is noted that the final decision, based on the weighting and intuition of the researchers, was an extremely close one. An update from July 2, 1983 describes procedures for an 'ED ALL' capability to edit entire workspace in Apple LOGO. An update of February 1984 incorporates new experience with a second version of Terrapin LOGO. (LMM)

Computers in Schools. The Report of the Minister's Task Force on Computers in Schools.

Alberta Dept. of Education, Edmonton.

Pub Date—Jun 83

Note—140p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC06 Plus Postage.

Descriptors—*Computer Programs, *Computers, Delivery Systems, Elementary Secondary Education, Financial Support, Foreign Countries, Glossaries, Instructional Materials, *Policy Formation, Principals, School Surveys, *Teacher Education, *Use Studies

Identifiers—*Alberta, Canada, Computer Uses in Education, Software Evaluation

Focusing on the use of computers in Alberta's schools, this report reviews educational computing issues and makes recommendations to assist in the formation of policies and programs for the Canadian provinces. A summary of the study and discussions of computers and society and computers and schools are followed by a brief review of the current status of educational computing in Alberta and the other Canadian provinces. Results of a survey of all school principals in Alberta for each year from 1981 to 1983 to determine the use of microcomputers are

reported, as well as observations of task force members who visited Texas, California, and Minnesota. The purposes and characteristics of the education provided by Alberta's school system are briefly described, and ways that computers can serve education are outlined. Issues identified by the task force are then examined and 48 specific recommendations are offered that relate to students and curriculum, teacher training (preservice, graduate training, inservice, and continuing education); courseware (standards/evaluation, clearinghouse/distribution, and development/production); hardware (evaluation and acquisition, distribution and placement, networks, and peripherals); planning; organization; and funding. Suggestions for further research are included as well as a discussion of implications, a summary, and conclusions. (LMM)

Educational Technology. Final Report, 1982-83.

District of Columbia Public Schools, Washington, DC. Div. of Quality Assurance.

Pub Date—Dec 83

Note—58p.

Pub Type—Reports - Evaluative (142) — Tests/Questionnaires (160)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Computers, *Educational Equipment, Educational Technology, Equipment Maintenance, *Evaluation Criteria, *Models, Needs Assessment, Objectives, *Office Management, Program Development, *Program Evaluation, Questionnaires

Identifiers—*District of Columbia Public Schools

This report evaluates a project designed to provide systemwide direction to the application of education technology in the District of Columbia (DC) Public Schools. The evaluation follows the Planning, Monitoring, and Implementing (PMI) Evaluation Model for Decision Making which was developed by the Division of Quality Assurance of the DC school system. Following a brief summary and a list of 10 specific findings, background and project objectives are presented and the PMI model is described. Agreements and discrepancies for each objective are summarized, and general conclusions are stated. PMI status report forms show specific agreements and discrepancies in the inputs, processes, and outcomes for four project objectives: (1) identification and assessment of technology learning resources and related instructional management processes presently existing in the DC schools; (2) development of procedures for the purchase, operation, and maintenance of technological equipment for instruction, classroom management, administrative, and communication purposes; (3) establishment of guidelines for developing new programs and integrating existing technological programs into the school district's educational technology system; and (4) demonstration of effective management practices in the Educational Technology Office. Appendices include the evaluation model schema, Educational Technology Needs Assessment Questionnaire, Congressional Testimony on Computer Technology, and School Board Directive Concerning Recertification. Identifiers—*Computer Uses in Education, Educational Testing Service

One of a series on the responses by the Educational Testing Service (ETS) and others to critical problems in education, this overview addresses a variety of issues related to computer literacy. Topics discussed include the pace of the transition to the computer age, the development of microprocessors, and the computer as fad or revolution. Problems

related to definitions of computer literacy are examined and computer uses in the classroom are described, including projects in innovative schools such as the Waterford School (Provo, Utah) and Lamplighter School (Dallas, Texas), public schools, the Minnesota Educational Computing Consortium, and college computerization projects. A planned ETS program to offer Advanced Placement in computer science is outlined, and a summary of issues related to microcomputers notes problems of inadequate software, software evaluation, and teacher training. Discussions of the impact of computers on education and implications for public education, a description of ETS seminars for elementary and secondary educators, and a glossary conclude this state-of-the-art review. Identifiers—Computer Uses in Education, Impact Studies, *Toronto Public Schools (Canada)

This examination of the process the Toronto elementary school system is using to become familiar with microcomputers focuses on the introduction of microcomputers into the school setting and the resulting changing responses and interactions among pupils, teachers, administrators, parents, and others. In Phase 1, principals were surveyed for background information, while Phase 2 involved observation, interviews, and surveys in schools and special education settings in the Toronto elementary school system during the 1982-83 school year. The analysis of the data obtained is based on the concept of preparedness context, which refers to people in educational settings and their preparation for new technology. The first section of this report describes and discusses the results of the survey conducted in Phase 1. Results of the Phase 2 fieldwork are then organized around a specific preparedness context: grassroots preparedness, uneven preparedness, unallied external preparedness, and experimental preparedness. Typical patterns of interaction are traced and linked with preparedness through a description of each awareness context, an examination of the structural conditions that enter into the context, and examination of the consequent interactions, tactics, problems, and solutions. Appendices describe data collection methods and include the collection instruments used. (LMM)

Identifiers—Interactive Video, Two Way Television, *Wisconsin

These two documents contain a variety of articles on media use in education. The first provides 16 articles that focus on justifying media programs in the 1980's. Topics include selling your program to

administrators; reorganization of the Wisconsin Department of Public Instruction; video literacy; student-made videotape recordings; interactive video; helping policy makers see the need for effective media programs; cooperation of researchers and practitioners; media literacy; videotaping a health curriculum; membership in the Wisconsin Educational Media Association; free films; Cooperative Educational Service Area (CSEA) and the regional media center concept in Wisconsin; Speak and Spell; CSEA 11 Teleconference Network; and strategies for the media future. The second volume shares ideas, research, and program successes, in order to provide media professionals with strategies for doing more with less. Fifteen articles include discussions of microcomputer software on a limited budget; NASA Lewis Research Center's services to educators; designing microcomputer materials for classroom use; a team approach; multimedia story hour kits; the future as context for educational change; a student-operated radio station; imaginative gifted and talented programs; interactive media systems; interlibrary cooperation; a continuing education clearinghouse; implementing freeze-frame teleconferencing in Wisconsin; and computer education in Appleton, Wisconsin. Identifiers—Caribbean, *University of the West Indies (Jamaica)

A follow-up to a limited experiment with the use of satellites in education and public service conducted by the University of the West Indies (UWI) in 1978, this study explores the feasibility of providing a number of services, which would include an extension system based on the use of the UWI telecommunications network. The study was designed to determine the level of interest for UWI extension and other programs; existing and potential resources for the provision of such services; potential programming; types and likely costs of delivery systems; preliminary institutional groundwork that would be needed; and financial support. An introduction discusses the geographic area containing the English-speaking Caribbean territories, and describes general aspects and examples of telecommunications applications in the area, including specific applications of communications techniques in education, agriculture, and telemedicine in the various countries, and possible uses of a network by UWI. Additional topics discussed include the current status of agriculture, health, and education in the Caribbean; expenditures and demographic trends; possible telecommunications applications and available facilities; and possible telecommunications networks. Also included are reports on seminars, meetings, and demonstrations; recommendations for program options; an appendix listing steps for the establishment of an open campus; and a glossary. (LMM)

Identifiers—*Computer Centers, Computer Uses in Education, *Course Development

This paper proposes a two-part, basic computer literacy program for university faculty, staff, and students with no prior exposure to computers. The program described would introduce basic computer concepts and computing center service programs and resources; provide fundamental preparation for other computer courses; and orient faculty towards developing educational computing applications. An introduction and an explanation of the conceptual framework are followed by a description of the project, which would consist of two sets of 15 independent modules. Each module would include a 30-minute videotape program, a related short lecture, and independent, hands-on working experience with microcomputers. Support for the proposal includes descriptions of the instructional environment, target population, prior student competencies, learner needs, and instructional needs. Part 1 of the course (Computer Literacy: General Concepts) covers 24 topical goals, and Part 2 (Applications of Computer Based Education) covers 17. Commercially-available instructional resources are specified with title, author, publisher and cost, and in-house production costs are itemized. A proposed implementation plan describes activities for each project phase and specifies formative and summative evaluation procedures. (LMM)

Identifiers—*Australia, Computer Uses in Education, *National Policy

This book surveys current commitment to computers in education in many countries, with emphasis on use in Australia. For discussion of computer-related programs, countries other than Australia are categorized as (1) underdeveloped and uncertain—China, Thailand, and Yugoslavia; (2) developed but reluctant—Japan, Germany, and Sweden; and (3) developed and committed—Norway, France, United Kingdom (including England, Wales, Northern Ireland, and Scotland), United States, and Canada. The situation in Australia is then specifically addressed, with a summary of the status of computers in schools for each state and territory: Victoria, New South Wales, Queensland, Western Australia, South Australia, Tasmania, Northern Territory, and Australian Capital Territory. Developments at the national level in Australia are also examined. A final chapter provides an overview, analysis of non-Australian practices, summaries of non-Australian findings and the Australian position, and 20 recommendations regarding computer uses in Australian schools. A bibliography lists 126 items. (LMM)

Identifiers—*Asia, *Pacific Region

This volume, the first of three produced by a study group of experts from Australia, India, Indonesia, Maldives, New Zealand, Pakistan, Philippines, Sri Lanka, and Thailand, reviews their experiences in developing distance learning materials. Each country's experience is discussed in the context of problems it faced with special reference to materials relevant to teacher education. Problems and issues related to the specific educational and general developmental concerns of the different countries are also explored. A synopsis of possible national follow-up activities is presented for five areas: training; production and preparation of materials; dissemination of materials; extension; and research. Suggestions for further distance learning activities at the regional level relate to improvement of distance educators' access to regional training opportunities; examples of distance learning materials produced within the region; and a specialist association for distance educators. Appendices include an agenda, a list of participants, a list of working documents, and the keynote address. (LMM)

This handbook, the second volume in a series of three publications on distance education, presents guidelines on structures and strategies in organizations and the processes of materials development. A

checklist of specific items is included for each topic addressed. The first guidelines are addressed to policymakers and senior administrators and cover distance learning systems models, the target clientele, distance learning processes and their resource allocations inter-institutional coordination, management of production and distribution, and extending the clientele and range of programs. The second set of guidelines was designed to assist in the preparation of distance learning materials, and uses excerpts from Volume III (Exemplar Materials) to illustrate some points. Topics include establishing needs, setting objectives, resources and constraints, materials preparation, validating or field testing, consultation, evaluation and revision of materials, and implementation. Identifiers—Asia, Pacific Region

The third in a series on distance learning, this volume presents 11 exemplar instructional packages which are the output of a process of evaluation and selection in accordance with guidelines developed by the Technical Working Group at the Pakistan Meeting. It reflects an awareness of issues in the development, use, and renewal of distance learning materials for teacher education in the different socio-cultural contexts of Australia, India, Indonesia, Maldives, New Zealand, Pakistan, Philippines, Sri Lanka, and Thailand. Materials are classified in 5 categories: correspondence course materials, self learning materials, programmed text, radio, and television. Topics addressed are human development, education for disadvantaged groups—education for girls in India, teaching child psychology, planning research, maternal training of preschoolers, how a teacher should ask questions, tutoring at a distance, systems orientation, nation building, how to teach meaning of incomplete sentences, and education management in Thai society (welfare education). For each example, critical notes of the working group are included. Materials were revised in accordance with the group's comments. (LMM)

Identifiers—*Australia, Ground Station Receivers, Kangaroo Network (Australia), PEACESAT AUSTRALIA

This extensive report describes activities of the PEACESAT AUSTRALIA Project (the Kangaroo Network) which parallels, on the Australian continent, the endeavors of PEACESAT (Pacific Education and Communication Experiment by SATellite), and other Pacific Basin ATS-1 networks. An executive summary reviews the development of the project and its philosophy and objectives, which include using a network of low-cost ground terminals to give small users an

opportunity to discover effective satellite applications. Also described are the network and subnetworks, network coordination, access procedure, scheduling, access to other ATS-1 networks, application and technical experiments, the experimenters, technical matters, evaluation, and plans for 1984. Additional chapters provide details on sites, their institutions, and their status; geographical location; project membership, institutions, and personnel; and project subnetworks. Also included are a Kangaroo Network weekly schedule and priority times; ATS-1 weekly schedule; sample list of experiments and experimenters; list of ground station equipment; four institutional proposals for 1984; list of 31 publications; and miscellaneous items relating to current activities. An annex, "ATS-1 in Perspective," discusses the ATS-1 satellite, current usage of ATS-1 in Australia, the advantages and disadvantages of ATS-1, prospects for use of two Australian domestic satellites scheduled for launch in 1985 (AUSSAT), and conclusions. A 10-item reference list is provided. (LMM)

Identifiers—Challenge Examinations, *University of the West Indies (Jamaica)

The three papers in this report relate to the development and activities of the University of the West Indies Distance Teaching Project (UWIDITE), through which the University of the West Indies (UWI) is continuing experiments on the use of telecommunications to extend its regional services. A report to the advisory council, the first paper, summarizes the UWIDITE Project to date and discusses preliminary studies that led to recommendations for a small system to be used for inservice teacher training for challenge examinations, agricultural extension, and health training. Discussion of UWIDITE covers funding, objectives, initial programs, present status, equipment, maintenance, training, technical assistance, evaluation, present network uses, programs being prepared, project administration, advisory committee, conclusions, and suggestions. The second paper, "Developing Study Guides and Workbooks for Programs," lists UWIDITE program development services, and provides guidelines for the preparation of student materials for distance teaching programs. These guidelines suggest inclusion of a general introduction and course introduction, and suggest course development techniques. The third paper, "Interactive Distance Teaching," is a synopsis of strategies to make effective use of interactive audio through humanizing the experience and grouping the participants, preparation of course materials, encouraging discussion, and making listening easier. Identifiers—*Kenya, Writing for Children

This guide was developed for script writers on the Radio Language Arts Project, which was designed to develop, implement, and test the effectiveness of an instructional radio system to teach English as a second language at the primary school level in Kenya. The project was planned to produce a radio-based, English language program with approximately 195 taped 30-minute lessons for each school year, appropriate tests, teacher orientation materials, and classroom observation and data-gathering procedures. The following specific topics are addressed: writing for instructional media; radio as an instructional medium; listening; sound effects; the classroom teacher; writing stories for children; animal characteristics; writing instructional programs for children; purpose and objectives; evaluation; modeling; reinforcement; the program format; writing the program segments; and script check list. Script format is described including segment headers, special script instructions, script punctuation, script cover sheet, and review. The script for lesson 76 from the first year broadcast is included. (LMM)

Computer Literacy: A Model Plan for Teacher Education in the Area of Instructional Applications of Computers. Summary, Conclusions, and Recommendations.

Pub Date—84

Note—19p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Computer Literacy, Computer Programs, Computers, Course Descriptions, *Educational Needs, Higher Education, *Models, Program Descriptions, Program Development, Surveys, *Teacher Education, Teacher Education Programs, *Teachers

Identifiers—Computer Users, *Computer Uses in Education

To clarify computer literacy needs in teacher education, this study focused on the determination of computer literacy course offerings in higher education institutions, the perceived skills a computer literate teacher should possess, and discrepancies between teacher perceptions and computer literacy course offerings. Results were used to develop a model plan for teacher education in computer literacy. Information was solicited from 177 computer-using teachers and 12 National Council for the Accreditation of Teacher Education Institutions (NCATE) in Colorado, Montana, and Wyoming. Eight institutions returned computer literacy course materials and other information for content analysis, and 135 teachers (76.8%) returned 4-part questionnaires covering demographics, elements or skills of computer literacy (as developed for the 1978 Baum study), general topics in educational computer use, and additional information regarding computer literacy instruction. Results showed significant differences in the content of courses presently offered for computer literacy and the perceived need of inservice teachers for course content. This report includes the three-page model course plan for institutions, which outlines the components necessary to meet the computer literacy needs of inservice and preservice teachers. (LMM)

Conditions for Distance Education at the University Level in Sweden and the Other Nordic Countries.

Pub Date—Sep 83

Note—23p.; Paper presented at a seminar in Lahti, Finland, September 1983.

Pub Type—Reports - Descriptive (141) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Course Organization, *Delivery Systems, *Distance Education, Foreign Countries, Higher Education, *Models, *Program Evaluation, Teaching Methods, *Universities
Identifiers—Nordic Countries, *Sweden

This report discusses the highly decentralized Nordic model of distance education at the university level, which involves giving responsibility for carrying out distance education to the individual university departments. Meeting at the university and using the telephone are primary contact methods. The report includes a discussion of higher education in Sweden, distance education in the Nordic countries, basic ideas behind distance education at Swedish universities, the scope and general organization of distance education, and experimental ac-

tivities. The results of an evaluation of distance education courses at the Swedish universities are also discussed, as well as the advantages and drawbacks of the decentralized model used in Sweden and Australia. Sixty-six references are listed. Graphs show growth in courses and the distribution of subjects from 1973-1984; regions covered by individual universities and colleges in 1977; distribution of subjects by university area; and distribution of the most frequent subject groups: arts, administration and economics; languages; and behavioral, computer and natural sciences. Identifiers—*International Standard Book Number, PF Project

THE FOLLOWING IS THE FULL TEXT OF THIS DOCUMENT: As the number of software programs grows—and current estimates put the number at around 30,000—identifying a particular program can be a problem. R.R. Bowker Company, the administrator of the U.S. ISBN agency, has announced one solution to the identity problem—it will assign International Standard Book Number (ISBN) prefixes to hundreds of microcomputer software producers. Since many traditional booksellers are now also carrying software as part of their inventory, the ISBN system will permit them to use the same system for both books and programs. The ISBN system is currently the primary identification method used by more than 20,000 U.S. publishers and by libraries, schools, and bookstores. An ISBN number consists of ten digits in four groups linked by hyphens. The first part is called the country identifier. It is followed by a publishers prefix, which indicates the specific publisher, and a series of digits identifying a particular book or product. The final digit is a check digit, which guards against a computer accepting an invalid number. (Author)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Drama, Film Criticism, *Film Study, Grade 10, Guidelines, High Schools, Lesson Plans, *Production Techniques, *Television Curriculum, Theater Arts, Units of Study, Visual Literacy, Vocabulary

Identifiers—PF Project

The lessons in this 10-day unit for high school sophomores are designed to: (1) acquaint students with terminology related to visual literacy; (2) enable students to make comparisons between drama for the theater and drama for film; (3) acquaint students with the basic structural elements of film such as movement, lighting, sound and music, editing, and composition; and (4) help students become more analytical film viewers. Following a rationale for film and television study in the secondary curriculum, an overview of the unit and the general objectives are given. Each day's lesson plan provides objectives, materials needed, and procedures for teaching which include discussion and worksheets. Lessons require the use of particular films and materials which are identified. The final lesson requires the viewing of a videotaped segment of a television situation-comedy as a test of the students' understanding of the concepts presented in the unit. This document is part of a collection of materials from the Iowa Area Education Agency 7 Teacher Center project. (JW)

Identifiers—*Film Reviews, Media Appraisal, PF Project

Designed for media specialists and educators, this issue reviews 16 short films for children under the age of 14. Films included in the review range from 2 to 29 minutes in length and include song, puppet, verbal, nonverbal, and live-action animation. Topics cover fantasy and fairy tales, handicapped children, advertising techniques, inner city life, and ecology and nature. Produced throughout the 1970s, the films were tested at least three times with different groups of children and evaluated in terms of the children's responses. Each review provides a synopsis of the film, children's reactions to the film, and recommendations concerning ages and programs most suitable for the showing of these films. (LH)

Designed for media specialists and educators, this issue includes five articles on innovative museum film programs. The first article describes a successful film program conducted at the Staten Island Children's Museum. The second article describes inventive children's programs at the Delaware Museum of Art. The programs use films and activities to stimulate children's interest in museum art collections. The third article offers a brief section on captioned children's films for the deaf. The fourth article reports on two Media Center for Children seminars. Seminar topics included research, books and films, underestimation of children by the media, film artists and art, the use of humor in film, and the potential effectiveness of nonverbal films. The final article presents an interview with Michael Siporin, an independent filmmaker known for his use of humor in films. (LH)

Identifiers—Australia, Informal Education, *Media Appraisal, PF Project

Designed for media specialists and educators, this issue contains four articles focusing on children and

television. The lead article outlines major Australian views on television, analyzing how these concepts determine that country's use of the medium. The second article reviews international developments in children's television highlighted at the 1979 Books and Broadcasting for Children international seminar. Research into children's perceptions and evaluations of television dramas is documented in the third article. The survey focuses on children's views of situation comedies, reruns, and prime time shows rather than children's programs. This issue closes with excerpts from a book which assesses many movies frequently seen on television. (LP)

Identifiers—*Film Reviews, Media Appraisal, PF Project

Designed for media specialists and educators, this issue reviews 19 short films produced between 1956 and 1978. Films range from 2 to 24 minutes in length and include both verbal and nonverbal live-action and animation films. Although most of the films are aimed at elementary-aged children, a few are also suitable for teenagers and adults. The reviews provide synopses of the films, reactions of children during field testing of the films, and recommendations concerning ages and programs the films might be best suited for. The films included in this supplement are screened to eliminate those that are patently sexist, racist, ageist, condescending, or unnecessarily violent. In addition, a sample copy of the evaluation tool used to document children's responses to the films is included. (LH)

Designed for media specialists and educators, this issue includes five articles exploring the contributions of children's films to museum programs. Following a brief editorial encouraging the use of films in museums, the first article outlines a picture storybook model for evaluating children's films. Several storybook models are identified, and a sample evaluation is offered. The second article describes a study in which four groups of Hispanic children aged 3 to 12 were surveyed to evaluate quality, interest level, and problems of films targeted for this ethnic group. The third article outlines the development of a "discovery tour" program which uses films and activities to stimulate children's interest in museum art collections. The fourth article reviews a 3-day workshop on programming children's films in museums. A list of films is included. The final article describes a family film festival sponsored by

a 1979 conference of the Media Center for Children. Films included in the 4 hour screening of animations, documentaries, and extraordinary stories are reviewed. (LP)

Identifiers—*Film Reviews, Media Appraisal, Media Education, Media for the Handicapped, PF Project

Designed for media specialists and educators, this issue includes seven articles focusing on humanistic films for children. Following a brief editorial encouraging the ideals of humanism, the first article presents an analysis of seven films with positive sex-role models. Included is a model for evaluating children's films. The second article describes an interview with master artist and storyteller, Gerald McDermott, about his work as a filmmaker. The third article describes a film/poetry activity in which 10 films were shown to fourth graders in an economically depressed area to evaluate quality, interest level, and problems of the films. The fourth article provides descriptions of 16 films about people with handicaps in which the abilities rather than the disabilities of the people are portrayed. The fifth article recommends two books about media education that can be used as references. The sixth article presents a list of short 16mm films that are adaptations of literature or folktales. Eighteen short 16mm films, ranging from brief lyrical works and narrative dramas to documentaries, are reviewed in the final article, the film review supplement. (LH)

Identifiers—Film Reviews, Media Appraisal, Media Education, PF Project

Children's emotional responses to films are the focus of the four articles in this issue designed for media specialists and educators. Following an editorial discussing the responsibilities of media as put forth by Bruno Bettelheim, the first article presents a methodology and rationale for using story films to encourage children's exploration of their feelings. An annotated film bibliography is included. The second article presents a Media Center for Children film and activity session illustrating the following techniques for using films with children: a scaffolding introduction, talking aloud during the screening, and post-film discussions. The use of media as a means of bringing feelings into the classroom is the topic of the third article. Several books which can form a foundation for this new approach to media in education are described. This issue concludes with a review supplement of seven films ranging from pure cinema to nature study documentary. (LP)

A model user's guide for the film, "The Frog King or Faithful Henry," introduces media specialists and educators to the range of possibilities for developing different activities for different objectives and age levels from a single film. An introductory article provides a synopsis of the film, rationale for its choice as a model, a discussion of folklore, and suggestions for using the guide. The bulk of the issue is divided into users' guides for the following grade levels: kindergarten to 4th grade, 5th to 8th grade, and 9th to 12th grade. These guides include activities and discussion questions on the movie and related topics, such as fantasy and reality, animal symbols, characters and conflicts, folklore, realism and illusion, attitudes towards animals, and stereotypes. Six annotated bibliographies cover filmmaking and film use, animals, animals in art, bestiaries, folktales and folklore, history resources, poetry, and related films. The issue concludes with a review supplement of nine films that are either folktale films or that have a thematic relation to "The Frog King." (LP)

Identifiers—*Media Education, PF Project

Designed for media specialists and educators, this issue includes three articles which provide practical information for those who want to try making films with adolescents and children. The first article discusses cel animation techniques and explores applications of this type of filmmaking to the regular curriculum. The article touches on the filmmaking settings; potential problems; handy supplies; handling frustration; and avoiding equipment, artwork, and filming process disasters. The second article details the process of tracing paper/line animation—a technique found to be successful in workshops with rural Vermont children. Emphasis is on children's imagination and perseverance rather than drawing skills. The final section reports on liveaction filmmaking workshops with children and teenagers in an urban youth center, a hospital spinal injury unit, and at the Albright-Knox Art Gallery (New York). In this article, filmmaking is seen as an alternative to traditional art activities and as a way in which youngsters can acquire necessary technical skills. The issue concludes with a filmography listing of over 50 animation films. (LH)

Three articles offer parents suggestions on how to make television a positive experience for their children. An editorial introduces the following themes basic to all the articles: type and amount of television viewing should be regulated by parents; parents should discuss television with their children; and parents must become aware of the differences in the way adults and children perceive television portrayals. The first article weighs television's current tendency to influence children's opinions, values, and behavior through a basically distorted world view against its potential for offering sound problem solving models and encouraging children to examine their self-worth and their family and social values. The second article summarizes the developmental stages and preferences in children's television viewing. Originally developed as a handout for parents, the final article outlines a 4-week program for making family television watching more participatory and more critical. (LP)

Identifiers—Illinois Valley Library System, Library Statistics, *OCLC, Time Studies

A project was conducted from 1980 to 1982 to determine the costs and benefits of OCLC use in 29 small and medium-sized member libraries of the Illinois Valley Library System (IVLS). Academic, school, public, and special libraries participated by recording the time and staffing levels used for and the cost of OCLC and pre-OCLC cataloging (by in-house typing or duplicating of cards or purchase of vendor cards). It was found that (1) OCLC cataloging cost more than other methods, particularly for public and school libraries; (2) OCLC use provided a substantial reduction in staff cataloging time; (3) OCLC cataloging work was shifted to less expensive staff members in half of the libraries; (4) more cataloging information was provided when using OCLC; and (5) some libraries experienced decreased cataloging turnaround time with OCLC. Interviews with library directors and staff indicated other OCLC benefits, such as its use for interlibrary lending. A total of 22 of the 29 libraries decided to continue using OCLC after the project ended, despite its higher costs. This report describes project methodology and results with appendices presenting statistical information on project libraries, a map of IVLS, and sample worklog forms for the pre-OCLC cataloging studies and the OCLC cataloging study. This manual outlines the prescribed format and content of an institutional author record card, which forms the basis of the CARISPLAN (Caribbean Information System for Economic and Social Planning) Institutional Author Authority File used in conjunction with the databases of the United Nations (UN) Economic Commission for Latin America (ECLA). Fifteen fields are described, covering the officially selected institution name, city, coun-

try, parent body, former name(s), subsequent name(s), the language of the institution name, any versions of the name in other languages, any other versions of the name, a notation if the institution is a UN organization, identification of the information center and person entering institutional author data, the date of data entry, the source for the officially selected author information, and an ISIS (Integrated Set of Information System) number used to uniquely identify institutional authors in ECLA databases. Each field description comprises a definition of data included in the field, a description of the field's purpose and basic characteristics, and rules for data entry. A sample record format and a field definition table are also provided. Appendices present further guidelines for the choice and form of data entries, lists of country and language codes used on the record card, and a 10-item glossary. (ESR)

Identifiers—*Information Technology, International Business Machines, *National Commission Libraries Information Science, Public Sector Private Sector Cooperation, Resource Sharing

This report, submitted to the President in accordance with the National Commission on Libraries and Information Science (NCLIS) Act (PL 91-345), describes NCLIS activities for the 12-month period from October 1, 1981 through September 30, 1982. Activities specially noted include the dissemination of the NCLIS report entitled "Public Sector/Private Sector Interaction in Providing Information Services"; coordination of hearings on the changing information needs of rural America and on computer-based information systems and services in agriculture; and initiation of a public/private sector cooperative project with IBM (International Business Machines) to investigate the impact of technology on libraries. Sections cover: (1) introductory material; (2) work with the executive and legislative branches and national and international library/information science associations; (3) progress made in accomplishing three major NCLIS goals, i.e., developing specifications for new library legislation, improving the dissemination of federal information, and improving library services through resource sharing and applications of technology; (4) other activities; (5) future directions and plans; and (6) personnel and administrative changes. A list of NCLIS personnel and an executive summary are also provided. Appendices include a copy of Public Law 91-345; a fiscal statement; and lists of NCLIS publications, publications and media produced by the 1979 White House Conference on Library and Information Services (WHCLIST), NCLIS projects, and former commission members. Descriptors—Check Lists, *Community Information Services, Guidelines, *Institutional Cooperation, Library Role, *Library Services, *Public Libraries, Social Agencies, *Social Services
Identifiers—National Commission Libraries Infor-

mation Science

This report describes the work of the Community Information and Referral (CI&R) Services Task Force, which was appointed by the National Commission on Libraries and Information Science (NCLIS) to investigate the status of CI&R in libraries and social service agencies and to make recommendations regarding the appropriate role for libraries in the field of CI&R. CI&R is defined as the active process of linking people with needs to resources (agencies, programs, people, or institutions) that can handle those needs. The body of the report is divided into four sections: (1) a concise statement of the problem and the history of the Task Force; (2) a definition of the scope of CI&R services and an analysis of these services, from the perspective of users, the government, and CI&R providers; (3) a list of organizational, staff, and administrative criteria that contribute to the provision of high-quality CI&R services and an analysis of possible ways to provide these services, with the conclusion that CI&R is an interdisciplinary task best accomplished by the coordination of social service agency and library efforts; and (4) a series of 13 recommendations in the areas of education, policy/legislation, promotion of services, and experimentation and study. Also provided are an executive summary and a Task Force membership list. (Author/ESR)

Identifiers—*Library Funding

This report describes the work of the Task Force on Library and Information Services to Cultural Minorities, which was appointed by the National Commission on Libraries and Information Science (NCLIS) to explore the status of services, resources, and programs for American Indians, Asian Americans, Hispanic Americans, and Afro-Americans, and to make recommendations for improvement. Sections cover: (1) minority library and information needs; (2) the representation of minorities among library personnel, with a discussion of salaries, library schools and library education, continuing library education, staff development programs, and specialized library skills; (3) library services and programs for minorities including adult education programs and information and referral services; (4) the material and resource needs of America's minorities, touching on availability of resources, networking, barriers to access, collection development, selection policies, publishing, and other areas of concern; and (5) financing of library programs for minorities, covering the funding status of these programs, financial planning, and funding requirements. Forty-two recommendations are presented. Also provided are an executive summary and a foreword noting eight recommendations which NCLIS has declined to support. Appendices describe the methodology and findings of a needs assessment study of library/information service for Asian Americans (with a sample questionnaire provided); report on the needs of other minorities; and list Task Force participants. Descriptors—*Academic Libraries, Administrative Policy, Higher Education, Library Surveys, *Position Papers, Questionnaires, *Research Libraries, *Security Personnel, *Stealing

Identifiers—Book Losses, Book Mutilation, *Library Security

Responses to a one-page questionnaire on library security were received from 89 of 117 Association of Research Libraries (ARL) institutions (76%). The questions, which covered administrative security control, security policies and procedures, permanent identification of library materials, and swift responses to possible theft were derived from a longer questionnaire prepared by the Security Committee of the Association of College and Research Libraries (ACRL). It was found that 31% of the responding libraries had a security officer, 87% and 33% were marking their general and special collections respectively, 15% had a collection security policy, and most of the policies prescribed what to do about thefts after the fact. This publication contains (1) the two questionnaire forms; (2) security policy and procedure documents from Brown University, New York State Library, Colorado State University, Columbia University, Cornell University, Florida State University, University of Michigan, University of Toronto, McMaster University, and University of California, Riverside; and (3) task force reports on library security from Brigham Young University and University of Illinois at Urbana-Champaign. A six-item bibliography, a concise summary of survey results, and an evaluation sheet for this ARL Systems and Procedures Exchange Center (SPEC) kit are also provided. (ESR)

A Comparison of Placement and Salary Statistics of the School of Library and Information Management, Emporia State University with National Figures.

Pub Date—[83]
Note—42p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*College Graduates, Comparative Analysis, Employment Statistics, Higher Education, *Job Placement, *Librarians, Library Schools, *National Surveys, *Salaries, Salary Wage Differentials, Tables (Data), Trend Analysis

Identifiers—*Emporia State University KS

Placement and salary statistics from the School of Library and Information Management at Emporia State University (ESU) in Kansas were compared with national figures for the period 1974 through 1981. National statistics were taken from the "Placement and Salaries" studies of recent graduates of American Library Association (ALA) accredited library programs, which appear annually in the "Bowker Annual of Library and Booktrade Information" and "Library Journal." It was found that (1) the percentage of ESU graduates securing library positions was higher than the national average; (2) Emporia had a higher proportion of male graduates than was true for the nation as a whole; (3) the salaries of new ESU master's degree recipients were lower than the nationwide average but closer to national norms than expected; and (4) ESU placement figures by type of library, with a heavy emphasis on placements in school libraries, did not reflect national trends toward a high proportion of placements in special libraries and other information specialties. The report includes eight tables which present national and ESU statistics on male and female library school graduate placements and the high, low, average, and median salaries of beginning male and female librarians. Identifiers—*Compatibility (Information), Information Transfer

This UNISIST publication discusses issues related to the compatibility and standardization of bibliographic records, index languages, software, hardware, and other information systems and services. Following an executive summary, definitions of terms, and other introductory material, existing information systems with common standards are briefly described. A section on compatibility of bibliographic records then discusses codes for bibliographic description, record formats, a common communication format, data exchange problems, bibliographic references, journal titles, script conversion, authority files, filing order, serial holdings data, and bibliographic record problems. Index language issues and products discussed include vocabulary compatibility, the intermediate lexicon, an integrated vocabulary approach, microthesauri, the macrovocabulary, algorithmic approaches, multilingual processing, other aspects of terminological compatibility, and index language problems. The section on software compatibility covers programs and programming languages, command languages, database management systems, machine assistance for searching, user-system interfaces, and software problems, while the hardware section discusses computers, input/output devices, information storage devices, character sets, information transmission, computer networks, machine-machine interfaces, and hardware problems. Compatibility of numeric databases and the management aspects of compatibility are discussed. Also presented are a series of case studies showing how eight organizations have achieved some level of compatibility in information exchange. A series of conclusions, a 566-item bibliography, and a list of abbreviations and acronyms conclude the publication. (ESR)

Descriptors—*Databases, Foreign Countries, *Information Retrieval, Newspapers, *Online Systems, *Telecommunications

Identifiers—*Canada, *Packet Switched Networks

This paper presents an overview of the major Canadian online systems, which account for approximately 5% of information vendors and databases worldwide. Also described is DATAPAC, Canada's national telecommunications network, and DATAPAC's X.75 interface with TELENET, TYMNET, UNINET, and France's TRANSPAC. The online systems described include: (1) CAN/OLE, the online system of the Canada Institute for Scientific and Technical Information (CISTI), Ottawa, which provides access to some 20 databases of which 9 are Canadian; (2) IDRC/MINISIS, an information retrieval system developed by the International Development Research Centre (IDRC), Ottawa, which is used as a training system because it can be searched without charge by all Canadian online search centers; (3) QL/SEARCH, the online system developed by QL Systems Ltd., Ontario, which provides access to over 60 databases with emphasis on Canadian information; (4) INFO GLOBE, the full-text online version of the Globe and Mail (Toronto), one of Canada's leading newspapers; and (5) INFORMATECH/QUESTEL, a completely French-language online system operated under the auspices of the Quebec government's Ministry of Communications. The importance of Canadian online and telecommunications systems, both to Canadian searchers and others, is emphasized. A list of the addresses of Canadian online services and a 16-item bibliography are also provided. (Author/ESR)

Descriptors—*Cataloging, *Classification, *Library Technical Processes, *Subject Index Terms

Identifiers—*Berman (Sanford), Dewey Decimal Classification, Library of Congress Subject Headings

Perreault's essay presents a critical review of "The Joy of Cataloging," a collection of 44 essays, addresses, reviews, and letters by Sanford Berman, head cataloger at the Hennepin County Library (HCL) in Edina, Minnesota. Cataloging principles ascribed to Berman include naturalness and fullness of language, file integration, findability (exemplified by a rich multiplicity of added entries), and fairness (nonoffensive, noncritical cataloging). It is asserted that Berman lacks familiarity with general scholarly practice and with the theoretical foundations of cataloging. Berman's attitudes on descriptive cataloging and his attack on Anglo-American Cataloguing Rules, 2nd edition (AACR2) are described, as are his proposals for avoiding subject headings offensive to groups of persons. A case study in Berman's use of nonoffensive cataloging is given, with comments on Berman's lack of concern for systematicity. Also described are Berman's attitude toward the Library of Congress Subject Headings (LCSH) as a system, his views on syndesis and the improvement of subject heading systems, and his opinions on the Dewey Decimal Classification (DDC) system. The style of Berman's book is also reviewed. A series of heated responses by Sanford Berman and J. M. Perreault, a brief editorial comment, and the authors' vitae conclude the publication. (ESR)

The Effects of a Special School Library Program on Elementary Students' Library Use and Attitudes.

Pub Date—[83]

Note—12p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Attitude Change, Elementary Education, *Library Extension, Library Research, Reading Attitudes, *School Libraries, *Student Attitudes, *Student Motivation, Use Studies

Identifiers—Library Users

A group of 40 elementary school librarians in the greater Phoenix area of Arizona were invited to participate in a study of the effects of an experimental school library motivational program on library use, library attitudes, and reading attitudes of elementary school students. Librarians at 13 schools participated, with 11 completing the study. Each librarian provided a program of specific library activities taken from "Procedures for Library Study" (Everett, 1982) for sixth grade students, with a control group of students denied any exposure to the special library program. The effects of the program on elementary school students' classroom-related and non-classroom-related (social, study, or research) library use were large, and generalizable to the population of schools of which the 11 studied are representative. Students' attitudes toward the school library/librarian and reading also seemed to improve as a consequence of the program, although this result was suggestive rather than definitive. Although girls made greater use of the library and tended to have more favorable reading attitudes, the treatment appeared to have an equal effect on both sexes. The participating school librarians were very favorable in their evaluation of the program. A seven-item bibliography is provided. (ESR)

Identifiers—*Library Statistics

This compilation of annual reports of 169 New York State institution libraries for the year ending March 31, 1983, presents data on total resident population, library materials, interlibrary lending, circulation, library hours, percentage of population having direct library access, total paid library staff, and dollar expenditures. The institutions represented are concerned with correctional services, drug abuse services, education, health, mental health, mental retardation, developmental disabilities, and youth. In a separate table, a comparative summary indicates annual library expenditures for salary, materials, and other categories by institution type since 1973, including percentages of increase and decrease. Appendices comprise a key to the abbreviations used; a directory of state institutions which includes their addresses, the state department and system with which they are associated, and the names of both the librarian and the head of the institution; a list of public library systems showing the institutions in the same geographical area; and a sample New York State Institution Library Annual Report Form. Identifiers—*Educational Information, Education Management Information Exchange, Phenomenology, *Positivism, United Kingdom, User Needs

This two-part article outlines the provisions and limitations of the positivist and phenomenologist views of information science and describes the United Kingdom (UK) Education Management Information Exchange (EMIE), a 4-year experimental project aimed at developing and testing a range of information services for education officers and advisors in local authority education departments. The first part of the article examines the consequences of positivist information science including the distortion of such concepts as the "information user," "user education," and "information need." The limitations of the phenomenological approach to information service design are also explored and a new approach to information research and development is described which is based on greater understanding of information users. In the second part, three phases of the EMIE project are outlined: an exploratory phase which included observation of education officers at work; a 6-month trial period in which services were tested; and the current operational phase during which services are being offered to all LEAs (Local Education Authorities) in England and Wales. The role of an EMIE-style service in relation to decision-making is discussed and the case is advanced for closer involvement of users in information service design and provision. A 53-item bibliography is provided. (Author/ESR)

Clark, Philip M.

New Approaches to the Measurement of Public Library Use by Individual Patrons. Occasional Paper Number 162.

Illinois Univ., Urbana, Graduate School of Library and Information Science.

Pub Date—Dec 83

Note—49p.

Available from—University of Illinois, Graduate School of Library and Information Science, Publications Office, 249 Armory Building, 505 E. Armory Street, Champaign, IL 61820 (\$3.00 per

copy).

Pub Type—Reports - Research (143)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Data Analysis, *Data Collection, *Library Circulation, Library Planning, Library Research, Library Services, *Research Methodology, *Use Studies

Identifiers—Library Statistics, *Library Users, *User Characteristics

Based on the concept that library use measurement should have as its basic starting point the individual patron, a method of data collection and analysis has been developed that explores individual patterns of borrowing over time. The method accounts for the number of visits on which borrowing takes place, number of items borrowed per visit, and total items borrowed over time, and it relates these to personal characteristics such as gender and distance of residence from the library. Four "core groups" can be identified from this analysis: core borrowers, heavy visitors, heavy borrowers, and light users. The study of individual user patterns results in a variety of potential applications for library decision making, such as a revised look at reciprocal borrowing policy, new knowledge of patron characteristics in relation to library use, and more information on the proportion of community residents who borrow, the variations in use patterns by day of the week, and the use of multiple units in the same library system. This publication describes the basic principles of individual use measurement, methods of data collection, illustrative findings from two different library systems, practical applications of individual user measurement, and areas where further research and development of the methods will be necessary. Also presented is the author's vita. (Author/ESR)

Identifiers—*University of Tennessee Knoxville
Intended for researchers in nursing and health-related disciplines, this guide provides an annotated listing of 115 health science reference sources found in the libraries of the University of Tennessee, Knoxville. An introduction to library research covers use of the card catalog, the serials holdings list, and Library of Congress call numbers. Sources of periodical articles, book reviews, and abstracts are described, including general information indexes; biomedical, nursing, and health care indexes and abstracts; social sciences indexes and abstracts; and databases. A section on biomedical, psychiatric, and psychological dictionaries and manuals precedes sections on pharmacological reference sources and nursing and health science handbooks and directories. Also described are indexes to sources of statistics and publications containing general social statistics and statistics specifically related to the health care fields. An author/title index concludes the publication. (ESR)

Identifiers—*Slippery Rock University PA

A study was conducted to determine the educational value and effectiveness of a one-credit library research course offered since 1981 at Slippery Rock University (SRU) in Pennsylvania. The course is based on a workbook adapted from the one used at

Pennsylvania State University and students are required to complete workbook exercises and to compile a bibliography on 1 of a possible 25 topics. Based on t-test analysis of pretest and posttest results from an experimental group and a control group and on results of the administration of a Semantic Differential scale, it was found that there was a significant, positive gain in student knowledge of the library and student attitudes toward the library as a result of the course. One puzzling finding was that the pretest scores of the experimental group were much lower than those of the control group. This paper describes the study methodology and results, and also presents information on the history of library instruction at SRU and the objectives and design of the SRU library research course. Copies of the Semantic Differential form and the pre/posttest used to evaluate library attitudes and knowledge respectively are provided in appendices. (Author/ESR)

Descriptors—*Academic Libraries, Fees, Foreign Countries, Higher Education, *Information Retrieval, *Library Services, *Online Systems, Program Design, Publicity, *Reference Services

Identifiers—*Bibliographic Retrieval Services, *End Users, University of Ottawa (Canada)

This paper describes the provision of end-user search services in the libraries of the University of Ottawa using BRS/After Dark. It is noted that the service—Online After Six—is available during the evening hours to university faculty, students, and staff and to the general public. Program planning stages, service regulations, fees charged, and publicity methods are described. Based on initial usage of the system by education students, it is reported that difficulties encountered by clients and library staff included problems in using Boolean logic and the online print commands, low awareness of the range of databases relevant to any particular question, and the need for more extensive user assistance than was originally anticipated. Positive outcomes of the program are also outlined, e.g., 40% of the end users had fully satisfactory search results, even as first time users. The necessary prerequisites for an after-hours end-user search service in an academic library are concluded to be a positive perception of the possibilities such a service may offer clients; groundwork to convince the library administration that the project is feasible; careful planning, coordination, and training of staff prior to service start-up; provision of quality documentation to end users; and arresting publicity. A seven-item bibliography is provided. (ESR)

Identifiers—*Library Funding, Resource Sharing, *Wisconsin

This publication describes Wisconsin state level library services and their funding and presents recommendations related to state level resource providers, as required by Wisconsin Statutes, Chapter 347, Laws of 1979. Types of and the structure for providing statewide library services and resources are outlined, followed by a description of statutory, contractual, and other Wisconsin resource providers and their funding sources. A series of 17 recommendations are then presented, covering the designation of selected libraries to provide specialized backup interlibrary loan, information, and open access services to libraries and citizens in Wisconsin; the inclusion of a definition of a state level resource provider in the Wisconsin Statutes; the continued status of the Reference and Loan Library, the State Historical Society, the State Law Library, and the Legislative Reference Bureau as the only organizations with statutory responsibilities for statewide library services; funding for statutory and contractual state level resource providers; and related issues. Appendices contain copies of relevant Wisconsin statutes and describe the clientele, library collections, funding sources, and statewide document delivery, information/reference, and special services of statutory, contractual, and other Wisconsin state level resource providers. A list of assumptions and principles on which the recommendations are based concludes the report. (ESR)

Report of the Council on Library and Network Development on State Aid to Public Library System Resource Libraries. Bulletin No. 3358.
Wisconsin State Dept. of Public Instruction, Madison.

Report No.—WSDPI-Bull-3358
Pub Date—May 83
Note—9p.
Pub Type—Legal/Legislative/Regulatory Materials (090)

EDRS Price—MF01/PC01 Plus Postage.
Descriptors—Guidelines, Interlibrary Loans, *Library Acquisition, *Library Networks, *Public Libraries, *State Aid, *Statewide Planning
Identifiers—*Library Funding, Resource Sharing, *Wisconsin

Based on a Council on Library and Network Development (COLAND) study mandated by Wisconsin Statutes, Chapter 347, Laws of 1979, this publication recommends that state aid to public library system resource libraries be increased by 10%, with the funds to be used strictly for resource library collection development. Issues examined during the study and the need for a proposal related to state aid for public libraries are outlined. Desirable and undesirable features of the current status of resource libraries are listed, with desirable features including local control of public libraries and the current coordination of collection development on a statewide basis, and undesirable features including inadequate public library system funding and the concomitant channeling of library funds into staff and maintenance rather than collection development. The minimum functions of a public library system resource library are outlined, including serving as a system interlibrary loan clearinghouse, providing a backup library collection for system libraries, cooperating with the library system in a coordinated collection development program, and providing reference and referral services for system libraries. It is also recommended that the impact of the state aid proposal be evaluated five years after the enactment of the proposal into law. (ESR)

Identifiers—*Caribbean, *Caribbean Information System Economic Social Plan

This publication outlines the activities and impact of the Caribbean Information System for Economic and Social Planning (CARISPLAN), as reported by representatives of 16 Caribbean nations and various regional organizations. A copy of the meeting agenda and other introductory material are followed by brief summaries of reports from representatives of the Caribbean Documentation Centre (CDC), Barbados, Belize, Cuba, Dominica, the Dominican Republic, Grenada, Guyana, Haiti, Jamaica, Montserrat, the Netherlands Antilles, St. Kitts/Nevis, St. Lucia, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago, the Caribbean Development Bank, and the Caribbean Community (CARICOM) Secretariat. CARISPLAN technical aspects and services, the CARISPLAN Abstracts, the CDC Current Awareness Bulletin, and two CARISPLAN databases are also briefly evaluated. Recommendations developed during the meeting are listed, covering CARISPLAN input procedures, document deposit, database scope, abstracting and indexing for CARISPLAN, CDC training, the production and format of CARISPLAN Abstracts, CARISPLAN computerization, the impact of CARISPLAN upon users, the distribution of CARISPLAN abstracts, abstracting languages, services available from the system, and CDC document delivery. Appendices present a list of meeting participants, a copy of the opening address by Anthony Jacelon of Trinidad and Tobago, and a list of documents arising from the meeting. (ESR)

School Library Resources. Final Evaluation Report. E.C.I.A. Chapter 2.
District of Columbia Public Schools, Washington, DC. Div. of Quality Assurance.

Pub Date—Dec 83
Note—62p.
Pub Type—Tests/Questionnaires (160) — Reports - Evaluative (142)

EDRS Price—MF01/PC03 Plus Postage.
Descriptors—Books, Elementary Secondary Education, Input Output Analysis, *Learning Resources Centers, *Library Collections, *Library Services, Models, Nonprint Media, *Program Evaluation, Questionnaires, *School Libraries, Surveys, Use Studies
Identifiers—*District of Columbia

Based on surveys of library media specialists and teachers, an evaluation was conducted of the District of Columbia Public Schools (DCPS) School Library Resources Program, as operated during the 1982-83 school year. The stated objectives of the program were to demonstrate by June 1983 updating of library media services in 80% of the (public and private) schools involved and to demonstrate increased use of library media centers in a majority of the schools. The evaluation followed the Planning, Monitoring, and Implementing (PMI) Evaluation Model for Decision-Making, developed by the DCPS Division of Quality Assurance. As a result of the program, it was found that: there were increases in school library media center holdings of books, filmstrips, and other media; more schools (74%) met the minimum suggested criteria of 10 books per student in 1982-83 than in the previous year (70%); media services were updated by 83% of the schools; and teachers (67%) reported greater use of library media centers. This report describes the project, the design of evaluation methodology, and evaluation results. Extensive appendices present an evaluation model schema; copies of questionnaires and inventory forms used in project evaluation; survey results; information on educational media center workshops held as part of the program; and demographic information on schools surveyed. Using Communication Support in Projects. The World Bank's Experience. World Bank Staff Working Papers, Number 551.

World Bank, Washington, D. C.
Report No.—ISBN-0-8213-0119-5
Pub Date—82
Note—77p.
Pub Type—Opinion Papers (120) — Reports - Descriptive (141)

EDRS Price—MF01/PC04 Plus Postage.
Descriptors—Banking, *Communications, *Developing Nations, *Developmental Programs, Educational Strategies, Information Dissemination, International Organizations, *Investment, Motivation Techniques, Planning, *Program Development

Identifiers—*Communication Support, Loan Programs, *World Bank
Intended to assist World Bank staff and officials in deciding when and how to include communication support activities in Bank-financed development projects, this paper describes the use of planned communications to encourage participation in projects by certain groups of people, to improve institutional efficiency and staff development, and to ensure project benefits or prevent negative project impact. It is noted that communication sup-

port includes informational, motivational, and educational activities which make use of person-to-person contacts, group discussions, mass media, or other channels of communication. The paper describes: (1) the role and functions of communication support; (2) experience of communication support in World Bank lending projects; (3) the process of designing communication support activities; and (4) common problems and issues in the design of these activities. It is concluded that well-managed communication support can provide a cost effective approach to the design and implementation of development projects. Appendices present information on World Bank lending for development communications and educational broadcasting; illustrations of project analysis from Bank project work; an extensive list of the advantages and disadvantages of using different media, materials, and techniques for communication support; and a workshop agenda showing the integration of communication support into a course on population planning, policies, and programs. Administrative Review at the Iowa State University Library Technical Services Division: A Case Study.

Iowa State Univ. of Science and Technology, Ames, Library.

Pub Date—[Dec 83]

Note—20p.

Pub Type—Reports - Evaluative (142) - Tests/Questionnaires (160)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Academic Libraries, *Administrator Evaluation, *Evaluation Methods, *Job Performance, Leadership Qualities, *Library Administration, Library Personnel, Library Technical Processes, Questionnaires, Supervision

Identifiers—*Iowa State University
A personnel appraisal tool was developed at the Iowa State University Library for professionals supervised by the Assistant Director for Technical Services and the Head of the Monographs Department, to evaluate both their supervisors' performance and the appraisal review as an educational tool to improve administrator performance. A Technical Services faculty committee chose the Annual Supervision Evaluation Form of the University of Texas at Austin, the General Libraries, with modifications to reflect Iowa State University Library concerns. The questionnaires provided a list of statements with a scale to indicate the degree to which the statement applied to the supervisor, and a narrative section soliciting typed comments. Administrative skills covered included planning and organizing work, use of time, fairness to supervisees, communication skills, cooperation, management abilities, leadership abilities, and thoroughness of implementing plans. Different statements were used for directly and indirectly supervised faculty, and the questionnaire was modified for the Monographs Department. Though the upward evaluation was perceived as beneficial in providing information to improve administrative style, both administrators characterized the questionnaire as impersonal and limited and suggested possible changes or additions. The few written comments received were found helpful. (LMM)

Identifiers—*Association of Research Libraries,

*Library Statistics, Rank Order

This report presents data compiled from the 117 libraries that were members of the Association of Research Libraries (ARL) during the 1982/83 academic year, as well as an examination of data for trends in expenditures for the previous 15 years from the 75 academic libraries that were members throughout those years. Information includes data from four libraries that joined ARL in 1982-83: Delaware, Georgia Institute of Technology, and North Carolina State, and the non-university Canada Institute for Scientific and Technical Information. A guide to library code numbers provides a complete list of ARL members. Research library resources, staffing, expenditures, and interlibrary loan activity are covered in the report's data tables. Further report sections include an analysis of selected variables; Ph.D. and enrollment statistics; the ARL Library Index, a summary of rank order tables for ARL university libraries; and the rank order tables for volumes in library, volumes added (gross), microform holdings, current serials, professional staff, nonprofessional staff, total staff, materials expenditures, materials and binding expenditures, salaries and wages expenditures, total operating expenditures, total items loaned, total items borrowed, and current serials expenditures. A copy of the ARL Statistics Questionnaire is included. (LMM)

Competency Requirements for Library and Information Science Professionals.

King Research, Inc., Rockville, Md.

Spons Agency—National Inst. of Education (ED), Washington, DC.

Pub Date—Oct 83

Note—13p.; Paper presented at the Anniversary Conference of the Special Libraries Association (76th, University Park, PA, October 20-21, 1983).

Pub Type—Opinion Papers (120) - Reports - Research (143) - Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Educational Needs, Information Services, Job Analysis, Librarians, Library Automation, *Library Education, *Models, *Professional Education, Program Development, *Technological Advancement, Work Environment

Identifiers—*Competency Needs, Information Technology

Ways the education and training of information professionals can adapt to the rapidly changing information environment are addressed in this paper, which describes a project undertaken by King Research ("New Directions in Library and Information Science Education") to identify current and future competency requirements of librarians and other information professionals. It is hypothesized that a lack of communication between the employers of information professionals and the institutions that educate and train them is one reason that educational institutions are not meeting needs and demands of the changing environment and new technologies. Following a list of preliminary questions that need to be addressed in determining information professionals' training needs, the project approach and framework are described. Each aspect of this framework is then detailed, including trends which affect library and information science organizations, work settings, and the functions and activities performed. Also considered are the types of users served, the tools and techniques used/applied, and the types of materials handled. Finally, each step in the overall process of planning, design, implementation, and evaluation is examined. (LMM)

Library Technical Processes, Nonprofessional Personnel, Preservation, *Public Libraries, *Staff Development

Identifiers—*Iowa State University

This report describes the planning, implementation, and evaluation of a coordinated staff development program to offer certified, non-degree credit to non-professional librarians from small public libraries. Developed through the cooperation of the Central Iowa Regional Library and the Iowa State University Library, the program resulted in a plan for a course consisting of five 3-hour sessions covering the topics of collection development, government publications, preservation, and cataloging and classification. A summary of the course as it was implemented for 11 librarians and 1 library trustee is given, and the testing procedure is explained. Evaluation results, which indicated a need to concentrate on fewer topics and treat them in more detail, are discussed. Student demographics are tabulated, including type of library, education, work experience, library staff size, and library budget. Appendices include teaching application; course outlines for the topics of collection development, government documents collection development, conservation of library materials, cataloging overview, Sears' List of Subject Headings, and Dewey Decimal Classification; a collection development and technical services questionnaire; the student survey form; and course evaluation form. Descriptors—*Academic Libraries, Demonstration Programs, *Extension Education, Feasibility Studies, Higher Education, *Instructional Materials, *Interlibrary Loans, Library Cooperation, *Library Networks, Public Libraries, Regional Libraries

Identifiers—*California State University Chico, Instructional Television Fixed System

This report describes a demonstration project which used local libraries as the contact and distribution points for academic materials to California State University Chico (CSUC) extension or off-campus students, including students taking courses through the Instructional Television Fixed Service (ITFS). Interlibrary loan (ILL) procedures at CSUC and local Northern California libraries prior to the demonstration are discussed, and the university's role as an affiliate member of the North State Cooperative Library System (NSCLS) is described. The development, trial implementation (December 1980-January 1981), and evaluation procedures are detailed for this project, which experimented with using available delivery systems for integrating the CSUC collection into the normal pattern of filling ILL requests within the NSCLS. Results are discussed for each of 17 variables for the 2,121 ILL requests processed during the demonstration. Variables relate to the request source and how, where, when, and if the request was filled. Also included are crosstabulation results; daily observations made during the trial period; recommendations concerning files, forms, and statistics and program continuation; and 14 overall recommendations. Appendices include statistical data tables, service area maps, and trial period forms. (LMM)

Guidelines for the Preparation of General Guides to National Archives: A RAMP Study.

United Nations Educational, Scientific and Cultural Organization, Paris (France). General Information Programme.

Report No.—PGI-83/WS/9

Pub Date—20 Jul 83

Note—67p.

Pub Type—Guides - Non-Classroom (055)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Archives, Developing Nations, Foreign Countries, *Government Libraries, *Guides, *Library Collections

Identifiers—*National Archives

Based on a comparative study of guides from the Bahamas, Barbados, France, Italy, the Netherlands, Rhodesia, Spain, the United Kingdom, the United

States, West Germany, and Zambia, this handbook provides guidelines for the organization and content of a general guide to archives, particularly national archives. It is noted that the handbook is especially intended for use in developing countries. Sections outline the requisite parts of a guide to national archives, covering: (1) a suggested model plan and the arrangement and layout of the table of contents; (2) introductory chapters, which should provide information about rules governing the use of the archives, a list of general finding aids, and information on the history and legal status of the archives; (3) descriptions of the history and contents of archival holdings and collections, and the means of access to them; (4) information on the archives library; and (5) indexes, appendices, illustrations, and maps. Each of these sections describes practices followed in the guides studied and then describes the standard system proposed. Appendices present examples of descriptive entries from different countries, mainly on the subject of agricultural archives (in various languages); a list of rules for archival guide layout (in French); and a 39-item bibliography (in French). (ESR)

Identifiers—*Hawaii

Intended for school librarians and administrators, this guide provides a broad overview of the content and process of managing a school library. A broad overview of the purpose, historical development, and current activities of school libraries and school librarians is presented. Ensuing chapters address each of the major components of a school library program in greater detail, including the building of a positive climate in the school library; consultation and cooperation between librarians and teachers, administrators, and other staff; public relations and ideas for promoting maximum use of library resources; the production of instructional media; the provision and management of time, personnel, and facilities; the provision and management of library materials; and the assessment and evaluation of school library services. Appendices present an instrument for the self-evaluation of teachers and media specialists, a guide for producing a slide-tape presentation, a materials selection policy for Hawaii's school library media centers, a copy of the Library Bill of Rights, and the 1981 needs assessment packet for the school library. A list of contributors to the guide, a series of bibliographies at the end of most of the chapters, and an index are also provided. (ESR)

Descriptors—Careers, Employment Patterns, *Futures (of Society), *Information Scientists, *Librarians, Occupations

Identifiers—*Excellence

Information is essential to the functioning of society, and there are many exciting opportunities for information professionals in the future. These professionals must be prepared to meet the need for excellence in their field. Information professionals generally fall within one of two categories: those who support the creation and preparation of information and those who assist in using information. There has been a phenomenal growth in the infor-

mation sector, and the level of librarian employment is also growing. Factors affecting the information profession include the growth of an information hungry population, the information explosion, the increase in usage of libraries, and the growing range of library services. Different career paths in the information profession have also developed, as exemplified by the information scientist and the librarian. Leadership in companies in the next 25 years will come from the information profession, particularly those engaged in information resource management. Librarians must make everyone aware of their true contribution to society and, as professionals, must maintain reasonable expectations of what their careers can bring in terms of position and remuneration. Scholars, researchers, educators, and professionals must all be involved in the continued attempt to achieve excellence in the information profession. (ESR)

Implications: Economics of Technology on Public Libraries.

Pub Date—Mar 83

Note—18p.; Paper presented at the 1983 Conference for Public Libraries (Tallahassee, FL, March 6-9, 1983).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Cost, Effectiveness, Employment Patterns, *Fees, Futures (of Society), Input Output Analysis, Librarians, *Library Automation, Library Expenditures, *Organizational Effectiveness, *Public Libraries, Technological Advancement

Identifiers—*Information Technology

The economic implications of new technology in public libraries include its cost, the trade-off between costs and benefits, and sources of funds. The cost of, for example, a new terminal, should be subdivided into components and activities so that library expenditures and some resultant output can be clearly identified. In addition, when evaluating the costs and benefits of the acquisition of a terminal, it may be desirable not only to measure performance in terms of quality or quantities produced at that level of the system, but also to determine the effects that components, activities, products or services, functions, or the library have at higher levels. Costs and benefits are then expressed as input expenditures and output results in terms of performance, effectiveness, and higher order effects. Librarians often have to find alternative sources of funds for library technology, such as user charges. Factors to consider when instituting user charges include their effect on use of library services, the type of users served, the level of cost involved, the presence of alternative means of information retrieval, and the role of the library in society. This paper also briefly looks at the growth in the employment of librarians and other factors affecting the future of libraries and the information profession. Twenty-three references are listed. Identifiers—*Library Funding, Library Services and Construction Act, Library Statistics, Library Users, *Nebraska

During the summer of 1981, 15 state-supported institutional libraries in Nebraska completed self-evaluation forms on their library operations, constituents, and collections. Institutions included were adult correctional facilities, youth facilities, mental health/mental retardation facilities, and veterans' homes. It was found that institutions serving total annual populations of 150 or more residents generally had created staff positions for librarians; institutional librarians were responsible for library services to both staff and residents; generally only

one librarian was employed, with no salaried support staff; library collections were inadequate in both quantity and quality; and libraries were located in areas not designed for library service and in spaces too small to allow for the development of adequate collections, services, and programs to meet national standards. This report describes the survey methodology and findings and the impact of Library Services and Construction Act (LSCA) funds on the development of library services to residents of institutions. Comparisons are made to a 1967 study in order to measure institutional library development during the past 15 years. A sample self-evaluation form and profiles of the 15 institutional libraries, with comparisons to national standards for collection quality and size, are also provided. (ESR)

Pub Date—83

Grant—1237235032A1

Note—23p.

Pub Type—Opinion Papers (120) — Reports - Descriptive (141)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Agencies, Check Lists, *Community Information Services, Information Networks, Planning, Program Descriptions, Public Libraries, *Referral, Social Services, *Systems Approach

This pamphlet focuses on the concept of information and referral (I&R) as a system and describes seven highly effective I&R systems that bring together people in need with the human service agencies that can help them. It is noted that thinking in terms of I&R systems, attention must be directed to the overall quality of the structures and processes involved in I&R delivery and that a strategic approach to building I&R systems must be adopted. Key elements of successful I&R systems are described as quality coverage of I&R for the service area, quality support functions for all I&R services within the system, and the development of I&R policies and practices. Operated by public agencies, public libraries, and private nonprofit agencies, the seven I&R systems described are located in Connecticut, Memphis (Tennessee), Summit County (Ohio), Los Angeles (California), Metropolitan Denver (Colorado), Southeastern Virginia, and Humboldt/Del Norte Counties (California). Centralized and decentralized systems and relationships between component parts of systems are also discussed. A list of questions for assessing the strengths and weaknesses of an I&R system concludes the pamphlet. (ESR)

Multitype Library Networking: A Framework for Decision-Making.

Pub Date—Apr 83

Note—9p.; Paper presented at the National Online Meeting (4th, New York, NY, April 12-14, 1983).

Pub Type—Opinion Papers (120) — Reports - Research (143) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Decision Making, *Library Administration, Library Automation, *Library Networks, *Library Planning, Library Services, Models, *Shared Services

Identifiers—*Resource Sharing

This paper describes a decision making framework for library networking which can be used by individual libraries, groups of cooperating libraries, or centralized services to evaluate current operations and define alternative approaches to automation and networking. It is noted that networking has not yet achieved its full potential because of a lack of understanding of how networking can help individual organizations and because network structures have often been imposed upon organizations without regard to their economic considerations. Six interdependent dimensions of the decision making framework are outlined, including: (1) library operational, user related, and derived functions to be performed through cooperative activities; (2) types of access to resource sharing information (logical and physical); (3) types of materials handled; (4) services and products to be offered as an outcome of networking activities; (5) networking configura-

tions or the relationships between the participants in the networking activity; and (6) the mode of communication between networking participants. A table listing library products and services related to each network function is presented, as well as an explanation of how to use the conceptual framework for decision making by utilizing the function dimension as a base dimension, selecting options for each of the remaining dimensions, and subjecting the options to a detailed economic analysis. Descriptors—Library Services, Library Surveys, *Public Libraries, Questionnaires, *User Satisfaction (Information), Use Studies

Identifiers—*Illinois, *Library Users, User Preferences

A survey was conducted of adult patrons leaving 70 Illinois public libraries on 1 day in April 1983 to determine patrons' success in using the library that day, their level of library usage in the past year, and what changes, if any, they would like to see in their local libraries. Responses were received from 62 (89%) of the libraries in the sample. Based on a weighted analysis of responses to determine a statewide estimate, it was found that 79% of the adults located what they wanted in the library on the day of the survey; that the next thing patrons reported they would do to locate material or information they wanted but did not find was to try another library (27%), try the same library again (51%), or try some other means (22%); and that while 36% of those surveyed requested no changes in their local libraries, the most desired change requested by other respondents was more or different books and periodicals. This publication describes survey methodology and results. Bar charts show responses by level of library usage and age of respondents, while tables present the distribution of responses by geographical area and community population size, whether patrons found what they wanted and their level of library usage, and the sex and age of the respondents. A sample questionnaire and a subject index to the first 12 Illinois Library Statistical Reports conclude the publication. (ESR)

Identifiers—*Defense Technical Information Center

This study describes the use and value of the major information products and services provided by the Defense Technical Information Center (DTIC). These products and services include technical report distribution on an on-demand basis and through the Automatic Document Distribution (ADD) program; secondary information dissemination through online searching of the Technical Reports (TR) database, Current Awareness Bibliographies (CAB), and Technical Abstract Bulletins (TAB); and provision of management information from three management databases—the R&D Work Unit Information System (WUIS), the R&D Program Planning Data Base (R&DPP), and the Independent Research and Development Data Base

(IR&D). Results of telephone surveys of approximately 450 DTIC users indicate that in 1982 there were 12.4 million readings of Department of Defense (DoD) technical reports identified through various channels including online searching of the TR database, use of CAB, and use of TAB; and that there were about 14,000 users of the management databanks. Expressed in terms of willingness to pay for its products and services, the value of DTIC to the user is indicated as \$367 million, while its value to the funders, expressed in terms of savings resulting from reading of DoD technical reports, is estimated at \$37.5 billion. An executive summary, sample questionnaires, and a list of responses to open-ended questions are provided. (ESR)

Identifiers—Bibliographic Data Bases, Database Management Systems, Software Evaluation, *Software Reviews

Designed to provide guidance in selecting appropriate software for library automation, information storage and retrieval, or management of bibliographic databases, this inventory describes 188 computer software packages. The information was obtained through a questionnaire survey of 600 software suppliers and developers who were asked to describe the features, functions, hardware and software requirements, acquisition terms, and user support provision of available systems. An introduction briefly reviews the need for an inventory and the inventory methodology used, and provides a statistical summary of the results. A general guide to selecting software packages covers various factors for consideration in evaluating needs and system merits. Information from the questionnaires is displayed with tables listing the main applications and main features of each system by acronym, required compilers for software packages, price range by main function, and main function by computer type. The brief description provided for each package includes its general features, hardware requirements, software operating system, software application system, cost, and installation. A three-page bibliography, a glossary, the questionnaire, and five indexes and reference lists are provided. (LMM)

Identifiers—Electronic Mail, Electronic Trading, Electronic Trading Systems, *Information Technology, Interactive Systems

This document discusses issues and developments related to the effects of new information technology on agriculture, beginning with an overview of the range of information-related issues, the evolving role of information technology, and the "stakeholders" (the groups) involved in advanced information systems for rural America. An examination of information technology and its agricultural applications

traces historical developments, delineates the types of information normally used by farmers and ranchers, and discusses the implications of the information revolution in agriculture. A brief chronology reviews selected events in United States history, including recent federal initiatives influencing the utilization of new information systems. Selected information systems demonstrating technological applications are described, including agricultural databases, farm management software, electronic trading systems, videotex systems, and electronic messaging networks. A comprehensive listing of operational agricultural systems in the United States is followed by a map depicting the programs' centers of operations. Activities related to a series of 97th Congress oversight initiatives are summarized, and a 28-item reference list is included. (LMM)

Identifiers—National Library of Medicine MD

This publication outlines and presents a series of 27 learning modules for a course in medical librarianship intended to be conducted in an individualized instructional framework featuring lectures, small group discussions, talks by guest speakers from the medical profession, on-site observation of hospital libraries, on-line demonstrations of medical databases, and in-library search assignments. Course objectives, methods, and requirements are briefly described followed by an outline of the course, which covers class orientation; an introduction to the field of medicine; medical terminology; special subjects in the basic sciences and medical specialties; the health science library; medical bibliography; basic medical reference and information resources; building the medical library collection; audiovisual services and materials; automation in medical libraries; library planning, furniture, and equipment; research methodology and grantsmanship; National Library of Medicine (NLM) services and products; medical databases; and professional associations. Each module lists instructional objectives and requirements and/or options for module completion and student evaluation. A course planning form, sample quizzes, and a 119-item bibliography are also presented. (ESR)

Identifiers—*Copyright Law 1976, *Fair Use

Intended to serve as reference materials for discussions with teaching faculty and other members of the university community, this paper and its attachments provide guidelines for members of the Association of Research Libraries (ARL) on fair use and the classroom and library photocopying provisions of the Copyright Act of 1976 (PL 94-553). Factors involved in determining whether a particular use is a fair use of a copyrighted work are outlined. The provisions of the 1976 "Classroom Guidelines" are reviewed and described as unsuitable in the context of postsecondary education. Also outlined are issues related to the reproduction of musical works, copying for reserve room use, and the "umbrella" statute recommended by the Association of American Publishers (AAP). Attachments include a briefing paper

for librarians and archivists on current issues in library photocopying and copyright and a University of Wisconsin-Madison policy statement on photocopying for teaching and research, which is suggested as a model for other universities. The policy statement covers copying which is completely unrestricted, copying which is permitted, copying for which teachers should obtain permission, and publishers' guidelines for making multiple copies for classroom use. Information on how to obtain permission for copying and a sample letter requesting such permission are also provided. (ESR)

Rhode Island and Its Libraries: Report of the Comparative Data Committee, State Advisory Council on Libraries.
Rhode Island State Advisory Council on Libraries, Providence.

Pub Date—10 Feb 84

Note—10p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Federal Aid, *Library Services, Public Libraries, State Agencies, *State Programs Identifiers—Library Funding, *Library Services and Construction Act, *Rhode Island

This publication describes Rhode Island's expenditure of funds under the Library Services and Construction Act (LSCA), compares this expenditure to that of other states, and presents recommendations for change in the funding policies of the Rhode Island Department of State Library Services. A list of major library programs is provided, showing the amount of LSCA money allocated to each program in 1981-82 and 1982-83 and the percentage of total program funding provided by these federal funds. It is indicated that LSCA monies constituted a substantial, but generally declining share, of the overall funding for various Rhode Island library programs, and that Rhode Island is not alone in using federal aid for system maintenance (paying for library operations, personnel, or equipment) rather than specialized library projects. It is finally recommended that the state library agency dedicate more of its LSCA funds to innovative projects designed to serve target populations and less to the support of local library services, library systems, and the statewide network, which should be supported by municipal and state monies; and that the state library agency seek legislative and executive approval to move away from per capita and base grant funding toward formulae which better equalize such aid in response to local fiscal capacity and/or local fiscal effort. Identifiers—*Access to Information, Freedom of Information Act, Public Access

This publication reviews means of access to information contained in the public archives (current administrative documents and archival records) and private archives (manuscripts of personal or family origin) of many countries and makes recommendations for improving access to archival information. Sections describe: (1) the origin and development of the idea of access to archives and trends in archival use by researchers and the general public; (2) the right to information and its limits, covering principles and legal procedures for access to official documents, systems of accessibility and closed periods, categories of documents not freely accessible, limitations on legal access, special clearance procedures, and the ethics of charging for access; (3) material obstacles to access, covering the administration of public access programs, restrictions required for the physical protection of documents, and public awareness of archive contents; (4) diffi-

culty of archival information, covering the removal of documents from storage areas, microfilming and reproducing documents, publication of archives, and copyright issues; and (5) audiovisual and machine readable archives and the archives of international organizations. Appendices present a list of the laws and rules currently in force concerning access to archives in over 100 countries; a 45-item bibliography; and the text of related laws and rules from France, the Federal Republic of Germany (FRG), the USSR, and the United States. A project was conducted from 1980 to 1982 to determine the costs and benefits of OCLC use in 29 small and medium-sized member libraries of the Illinois Valley Library System (IVLS). Academic, school, public, and special libraries participated in the project. Based on written attitude surveys of and interviews with library directors, staff, patrons, and members of the library governing board or other governing authority, this publication describes: (1) expectations of OCLC and the project; (2) attitudes toward specific facets of OCLC, covering attitudes toward cataloging and resource sharing on OCLC, staff effectiveness/satisfaction with OCLC, public relations and OCLC, clustering and public access terminals, and OCLC costs and other disadvantages; (3) the medium-sized public library that did not continue OCLC use; (4) attitudes toward the project and post-project needs; (5) the differences between attitudes of library directors and governing authorities; and (6) factors influencing the decision to continue or discontinue OCLC use after the project ended. Extensive appendices present statistical information on project libraries; a map of IVLS; sample questionnaires; full details of the responses to all attitude surveys and interviews; and a sample OCLC decision packet outlining OCLC benefits, disadvantages, and costs in a format designed to help library directors make a decision on further OCLC use. Identifiers—Library Funding, *Library Services and Construction Act, *Michigan

Completed in accordance with the provisions of the Library Services and Construction Act (LSCA), this agreement outlines the criteria to be used in Michigan for determining adequacy of public library services and assessing programs and projects to be funded by LSCA Title I grants. Members of the Michigan Legislative Council, administrative personnel at the Library of Michigan, and the 1983-84 representatives on the LSCA Advisory Committee are listed, as well as the criteria for determining the adequacy of public library services for persons residing in areas without services or with inadequate services, disadvantaged persons residing in areas with high concentrations of low income families, persons of limited English speaking ability, persons in state institutions, physically handicapped

persons, and persons and libraries using services from major urban resource libraries. Per capita personal income and the unemployment rate—criteria used to identify high concentrations of low income families—are listed for the 83 counties in Michigan. Counties qualifying as economically disadvantaged are then identified and information is provided on their participation in Michigan's 17 regional library cooperatives. It is noted that the cooperatives are heavily involved in serving economically disadvantaged areas of Michigan and that they will be given priority over local public libraries for Title I grants. Descriptors—*Academic Libraries, *Building Design, Facility Planning, *Facility Requirements, Guidelines, Higher Education, Library Automation, Library Equipment, *Library Facilities, Library Materials, Library Planning, Prediction, *Space Utilization, *Technological Advancement

This paper examines the likely effects of technological developments on the planning of American academic library buildings during the 1980's and shares Richard Snyder's experiences in the design and construction of a new library building at Drexel University in Pennsylvania. Descriptions of general, economic, policy, psychological, and sociological problems in projecting technological developments are followed by an outline of design and construction considerations including modular design, library entrances, ceilings, floors, floor coverings, windows, walls, doors, HVAC (heating, ventilation, and air conditioning), acoustics, electrical power, lighting, energy usage, communications, security and safety, and future expansion. Guidelines on planning for library spaces are also provided, covering administrative organization; general space calculations; reader space; collection space for magnetic disks, video and optical disks, access to electronic publishing, microforms, reserve and reference materials, browsing and special collections, maps, and audiovisual materials; staff space; and other library facilities including public catalog areas, classrooms, exhibit space, and machine repair and photographic space. It is emphasized throughout the paper that library buildings should be designed for the foreseeable future with a maximum of flexibility to accommodate future technological changes. (ESR)

Cuban Refugee Camp Newspapers in Microform.

Pub Date—[80]

Note—6p.

Pub Type—Reference Materials - Bibliographies (131)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Library Collections, Microfilm, *Newspapers, *Refugees

Identifiers—*Cuban Refugee Program, *Refugee Camps

This paper presents bibliographic information on ten newspapers that were published during 1980 in Cuban refugee camps in order to acquaint Cuban exiles with life in the camps and in the United States and later were collected and reproduced on microfilm by the State Historical Society of Wisconsin. The newspapers are described as a more accurate portrayal of refugee conditions than can be found in the local or national press due to the fact that they were written and edited partially by the Cubans themselves. An unsuccessful attempt to locate Haitian refugee camp titles is also mentioned. Bibliographic citations list newspaper title, place of publication, frequency, size, publication numbers and dates, current publication status, language(s) of publication, editor(s), and OCLC number. It is noted that the microfilm reels can be purchased from the State Historical Society of Wisconsin. (ESR)

Identifiers—*Portland State University OR, *Water Damaged Books

Intended to be used in conjunction with the Portland State University handbook entitled "Safety Guidelines and Emergency Procedures," this manual provides guidelines to be followed in the event of library emergencies involving fire, flood, fumes, smoke, and water leakage, with special attention given to the processes required for the salvage of library materials which have been damaged by water. A checklist of emergency procedures covers the location and description of emergencies, reporting of emergencies, building evacuation, the proper use of fire alarms and extinguishers, fire prevention, and steps for dealing with flooding, water leaks, fumes, and smoke. Three plans for disaster recovery from water damage are then outlined, covering the freezing of up to 15, up to 50, and more than 50 shelves of books. Extensive appendices present lists of salvage team members, library staff volunteers (this list is not complete), and local and off-site conservation and restoration specialists; listings of sources of supplies, equipment, and services; information on freezing priorities, the handling and packing of wet or damp material for freezing, and the handling of special materials, including archival storage boxes, separate sheets and leaves, photographic materials, and audiovisual materials; and building maps showing the location of fire alarm boxes, hoses, and portable extinguishers. Identifiers—Document Delivery Service, *Malaysia

A survey of 88 users of SISMAKOM, a computerized selective dissemination of information (SDI) and document delivery service provided by the Universiti Sains Malaysia and four other Malaysian universities, was conducted in August 1982 in order to collect data about SISMAKOM and to assess the value of a computerized SDI service in a developing country. The SDI service, which is based on the Chemical Abstracts (CA) and the Food Science and Technology Abstracts (FSTA) databases, has been offered to college instructors and selected personnel in private businesses and the government since November 1980. Approximately 78% of the respondents indicated that they were better informed since they started using the service; 30% of the respondents were already aware of the existence of more than 60% of the information supplied; respondents reported a saving of 3 hours per week due to use of SISMAKOM; 90% of the respondents wanted to continue using SISMAKOM and 40% of these were willing to begin paying for the service; and 62% of the respondents expressed a need for retrospective searches. This publication presents descriptions of the SDI project and survey methodology and results, a series of recommendations for SDI services in developing countries, and a sample questionnaire (in Malaysian with an English translation). Identifiers—*Library Services and Construction Act, *Michigan

Prepared as an outline of the long range Michigan library development program, as required by the Library Services and Construction Act (LSCA), this document presents goals, objectives, and procedures for extending, improving, and strengthening library services to unserved and underserved segments of the Michigan library population from 1983 to 1988. A needs assessment precedes a discussion of objectives focusing on seven areas: (1) public library cooperation, including the strengthening of metropolitan and urban resource libraries; (2) service to the disadvantaged, including low-income persons, the elderly, and persons of limited English speaking ability, and those geographically isolated; (3) service to the physically handicapped; (4) service to residents of state and local institutions; (5) improving and strengthening the state library administrative agency; (6) construction and remodeling of public libraries in order to meet barrier free standards and conserve energy; and (7) multitype library cooperation, including establishment of local, regional, and interstate library networks and the coordination of resources among school, public, academic, and special libraries and information centers. Strategies for each of these areas are discussed, followed by a statement on continued planning and periodic evaluation. A 5-year graph for the overall state action program, information on the formation of the Library of Michigan, and a list of the 1983-84 LSCA Advisory Committee members are provided. (ESR)

Descriptors—Attitudes, *Cataloging, Cost Effectiveness, Input Output Devices, *Interlibrary Loans, *Library Networks, *Online Systems, Records (Forms), Regional Cooperation, *Shared Services

Identifiers—*Illinois Valley Library System, Multitype Library Networks, *OCLC, Resource Sharing

A project was conducted from 1980 to 1982 to examine the costs and benefits of OCLC use in 29 small and medium-sized member libraries of the Illinois Valley Library System (IVLS). Academic, school, public, and special libraries participated in the project. A major project objective was to determine whether the sharing of an OCLC terminal by two to five libraries in close geographic proximity could significantly cut costs and yet provide acceptable service. This report describes specific cluster work arrangements for cataloging and interlibrary loan, including cataloging at the host library; conducting part of the cataloging procedure at the guest library and the rest at the host library; limiting interlibrary loan activity to lending of materials requested via OCLC; lending and borrowing through the host library; lending and borrowing by the guest library; and dial access interlibrary loan use and shared use of a portable terminal. Financial and physical considerations of these cluster arrangements are described as are the reactions of librarians and staff. It is concluded that clustering provides a good way to introduce libraries to OCLC use, but that any cluster arrangement will probably result in quest libraries deciding, if at all possible, to purchase their own terminals. Appendices present statistical information on project libraries, a map of IVLS, and a sample IVLS/OCLC cluster agreement form. (ESR)

Identifiers—France, *India, United Kingdom

A 2-month study trip was made in 1982 to 4 major repositories of Indian archival material in France and 2 major repositories in the United Kingdom in order to draw up a detailed inventory of dossiers, other file units, and isolated individual documents related to the history of India that are located in these repositories. The repositories visited included the Depot des Archives d'outre-mer, located in Aix-en-Provence; the Archives Nationales, located in Paris; the Section d'outre-mer d'Archives Nationales; the Archives du Département des Affaires étrangères, located in Paris; the India Office Library and Records, located in London; and the British Library, also located in London. This publication describes the study trip and the Indian archival material present in these repositories. It is recommended that microfilm copies of the material be acquired by the National Archives of India and acquisition priorities are outlined. Extensive appendices present a listing of the materials located, inventoried by archive group or similar descriptive unit and by class or series thereunder; a trip itinerary; a sample photocopy request form from the Archives Nationales; and a cost estimate for microfilming materials from the archives of France.

Identifiers—*Louisiana

A survey of 33 academic libraries in Louisiana was conducted in the spring of 1983 to determine the techniques used during the 1981/82 academic year to impart bibliographic or library instruction to students and faculty. A total of 27 responses were received. It was found that all but five of the respondents had a library instruction program; the most frequently used instructional mode was a single lecture to classes, while other methods included guided and self-guided walking tours, slide/tape presentations, provision of library handbooks, term paper clinics, and point-of-use instruction. The most popular evaluation method for library instruction was student generated papers, with course tests a close second. This publication briefly summarizes survey methodology and results and presents a directory compiled from the responses given on the questionnaire. Each entry provides the name of the parent institution, the name and address of the library, the name and telephone number of a library contact person, an institutional profile, a description of the bibliographic instruction program, information on methods used to publicize the program, and other related information. A sample questionnaire and a subject index to the directory are also provided. (ESR)

Identifiers—*Copyright Law 1976, *Fair Use

Designed for use by librarians, teachers, and students, this booklet provides information on permissible levels of and limitations on the photocopying of copyrighted material for educational purposes, as outlined by the Copyright Law of 1976 (PL 94-553), its subsequent amendments, and guidelines, effective January 1, 1978. Following introductory material on the "fair use" provisions of the Copyright Law, guidelines are presented which cover classroom copying of print materials in not-for-profit educational institutions, the educational photocopying of pieces of music, off-air recording of television broadcast programming for educational use, and the copying of microcomputer software. A sample request for permission to photocopy sections of copyrighted material is provided. It is recommended that Texas school boards adopt and adequately publicize

policies designed to guide school personnel in complying with the Copyright Law. Also provided are lists of the members of the Texas State Board of Education and the heads of the State Board of Education committees as well as a 13-item bibliography. (ESR)

A Study of Collection Use at the University of Cincinnati Central Library.

Pub Date—[83]

Note—58p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Academic Libraries, Decision Making, Higher Education, *Information Needs, *Library Circulation, *Library Collections, Library Planning, Library Research, Storage, Use Studies
Identifiers—Inhouse Use, Library of Congress Classification, Retrospective Conversion (Library Catalogs), *University of Cincinnati OH, *User Needs

A usage study of monograph and serial library holdings at the University of Cincinnati was conducted in 1982 to select candidates for retrospective conversion of catalog records and to determine what materials would be housed in a remote storage facility. The study measured both inhouse and circulation use for each Library of Congress (LC) subclassification. Methodologies from other use studies by L. E. Middlesworth, Herman Fussler and J. L. Simon, Richard Trueswell, Allan Kent, and Mary Jane Pobot Reed were adapted for use in the Cincinnati study. It was found that material showing charges back to 1977 (six years) and 1975 would have to be kept in the main collection to satisfy circulation and inhouse demand respectively; materials with recent imprints received far more use than older materials although it was not possible to determine a cutoff date which would enable the library to meet 90% of user needs; the overall ratio of monographs to serials used was 1.3 to 1 but this ratio changed rapidly over time; disciplines in the sciences and social sciences showed the greatest use of serials and materials with recent imprints; and the humanities demonstrated less use of serials and a far more pronounced use of older materials. This report describes the study methodology and its results, uses in decision making, costs, and benefits. Extensive appendices provide information on the distribution of usage by LC subclassification. (Author/ESR)

Outlines are presented for the courses that make up the three-tiered general education program at Los Medanos College. Part 1 provides background on the Los Medanos model and includes a position paper on the criteria and format for a Tier I course. Part 2 provides outlines for Tier I courses, which focus on providing a breadth of knowledge in six curriculum areas (i.e., behavioral, biological, physical, and social sciences; humanistic studies; and language arts). Part 3 contains the outline for the Tier II course, in which an interdisciplinary approach is

used to investigate five major societal issues, such as "Energy and Ecology," "The Limits of Growth," and "Nuclear War and Other Nuclear Threats," which vary from year to year. Part 4 provides guidelines for the Tier III courses, which involve an in-depth ethical inquiry into a single societal issue, and presents outlines for courses entitled "Control of Life and Death," "Freedom and Responsibility of the Mass Media," "Science and Human Values," and "Change: A Look to the Future." The course outlines include a catalog description; an overview and rationale; course-content and criteria-related goals; and evaluation, grading, and other course policies. (HB)

Descriptors—Community Colleges, *Community Education, Community Schools, *Institutional Advancement, Program Development, *Public Relations, *School Community Relationship

Developed for community educators interested in planning activities for National Community Education Day, this packet of materials presents planning ideas and examples of activities undertaken during the first National Community Education Day held in 1982. After messages from the National Community Education Association (NCEA) and the American Association of Community and Junior Colleges (AACJC), information on the planning packet is provided. Next, the role of National Community Education Day in enhancing an institution's public relations is discussed and guidance is provided on charting public opinion and selecting the most effective ways of reaching a target audience. The following sections highlight 1982 events that focused on increasing institutional visibility, fundraising, involving local children, promoting political awareness, utilizing Community Education Day in conducting other institutional business, and involving state-level policymakers. Next, suggestions are provided about using the Community Education Day logo, developing special "I Support Community Education Day" products, and inviting important members of the local community to the event. Resources available to help plan a National Community Education Day event are cited. Also included in the packet are: (1) a joint NCEA/AACJC resolution; (2) a step-by-step guide for organizing a community event; and (3) a special event analyzer to help institutions prioritize events in terms of their purposes and effects. Descriptors—College Planning, Community Colleges, *Educational Needs, Employer Attitudes, Enrollment Projections, Females, *High School Students, *Long Range Planning, Males, Master Plans, Needs Assessment, Population Trends, *Student Educational Objectives, Two Year Colleges, Vocational Interests

A study was conducted to determine the career or educational interests of high school juniors in Monroe County, to compile information about potential Florida Keys Community College (FKCC) students, and to gather data to project future enrollment trends at the college for long-range planning. Information on students' educational/career interests was obtained from a questionnaire survey of juniors at each of the area high schools, while Monroe County Planning Department reports, state educational reports, FKCC records, and reports from other agencies provided information on enrollment projections, population trends, and business and industry needs and directions. Study findings included the following: (1) high school students

expressed greatest interest in occupational studies in computer science, cosmetology, auto mechanics, secretarial science, and business administration/science; (2) the career and educational interests of males and females fell along traditional lines, although more females than males chose programs non-traditional for their sex; (3) needs of Monroe County employers did not correlate with the occupational interests of the high school juniors; (4) the county population was expected to increase over the next 37 years, primarily with respect to older, affluent adults; and (5) associate in arts programs ranked as a high need among the juniors. The study report includes the questionnaire, relevant demographic data, a literature review, and recommendations for planning. (LAL)

Descriptors—Community Colleges, *Content Area Writing, Essay Tests, Two Year Colleges, *Writing Exercises, *Writing Instruction, *Writing Skills

Identifiers—*Writing Across the Curriculum

Developed by instructors from the Los Angeles Community College District, this guidebook provides materials to aid community college instructors teaching in a variety of subject areas to integrate writing and student learning in their classrooms. Chapter 1 addresses a number of common concerns that instructors have about using writing in their courses and underscores the importance of teaching writing skills in non-English classes. Chapter 2 discusses the applicability of learning logs (i.e., journals in which students take notes on films, lectures, or discussions on one side of the page, and write their thoughts on the other) and emphasizes their value as a learning tool in promoting student fluency. This chapter includes sample student learning logs from a variety of classes. Chapter 3 presents guidelines on the design of effective writing assignments and assignment sequences, including design criteria, model assignments, and methods of designing sequences. Chapter 4 suggests ways to design effective essay questions and stresses the use of specific, substantive questions and the provision of evaluation criteria. Definitions, sample student answers, and a checklist of considerations for designing an essay question are provided. (HB)

Descriptors—Academic Standards, Articulation (Education), *College Role, *Community Colleges, *Educational Quality, Educational Trends, *Transfer Programs, Two Year Colleges, *Urban Education, Vocational Education

Strong enrollments in career programs have led many to conclude that occupational training is, and should be, the premier function of a community college—a belief that is supported by the ways in which community colleges are funded. Though strong technical programs are an important part of what urban community colleges offer to their students, access to the baccalaureate degree remains the most important opportunity these institutions can provide. Colleges seeking to advance the transfer function have attempted to correct some of the mistakes that have been made in the interests of increasing enrollments and maintaining fiscal stability. Some of the most promising directions being taken in this area are: (1) colleges are beginning to reemphasize the importance of the transfer function; (2) they are beginning to require the same literacy skills and academic preparation for those who enter transfer programs as for those entering career programs; (3) they are re-establishing strong orientation programs for students who intend to transfer;

(4) they are working with state coordinating boards, urban universities, and feeder high schools to establish clearly defined and better supported paths to the baccalaureate; (5) they are emphasizing skills that are required by advanced courses in remedial programs; and (6) they are concentrating available resources on students with the willingness and ability to use them to greatest advantage. In order to gather current data about the General Educational Development (GED) program at Seminole Community College (SCC), Florida, a random sample of 1982 GED examinees were surveyed to determine the examinees' assessment of the quality of instruction, course materials, and learning laboratories at SCC; the center(s) used most often and for what length of time; the methods of advertisement that were most productive in recruiting students; the main reason for taking the GED Test; the demographic profile of the typical GED student; and the program changes that would lead to improvement. Questionnaires were mailed to 242 graduates and 132 non-graduates of SCC's program who took the GED test in 1982. Study findings, based on responses from 196 graduates and 60 non-graduates, included the following: (1) overall, the non-graduates rated the course materials and instruction lower than the graduates; (2) SCC's special GED labs were used by a small number of the respondents; (3) the best advertising appeared to be word-of-mouth, as relatives and friends were the best sources of information about the GED program; (4) the main reason for taking the GED Test was job-related for the graduates and personal satisfaction for the non-graduates; (5) over 75% of the graduates were employed either full- or part-time, as were 68% of the non-graduates; and (6) over 80% of the examinees would strongly recommend the program to others. A literature review and the questionnaire are included. (Author/LAL)

Developed by the faculty and staff of Schenectady County Community College (SCCC) in support of established missions, policies, and goals, this academic master plan serves as a guide for the development of SCCC's programs and a gauge for monitoring progress toward stated objectives. Part I provides a statement by SCCC's president outlining the purpose of the master plan. Part II presents introductory material on the history and philosophy of SCCC and its current institutional mission. This section also includes information on past, current, and projected enrollments and student characteristics. Part III details the planning process, offering background on the planning initiative, long-range institutional goals, action plans for academic effectiveness, student services, enrollment, community relations, administrative improvement, and resource utilization. Part IV details the current status of planning by academic departments. For each of seven departments, a description is provided, along with information on the use of advisory committees,

course updating and new programs, and appended material on course sequences and relevant research. Finally, part V reviews the planning activities of 1981-82 and offers projections for the future. A questionnaire used to assess learning/media center activities is included. (LAL)

Descriptors—College Attendance, *Community Attitudes, Community Colleges, *Educational Attitudes, *Educational Needs, Enrollment Influences, *Institutional Evaluation, Needs Assessment, Questionnaires, School Personnel, Two Year Colleges, Two Year College Students

In 1981-82, a community needs assessment study was conducted to assist Schenectady County Community College (SCCC) in improving programs, meeting educational needs, evaluating promotional efforts, facilitating attendance, providing information to the community, evaluating program quality, and planning programs. A survey, sent to 1,173 SCCC students, 636 SCCC staff members, 600 high school staff members, and 1,125 selected community organizations, solicited information on factors influencing college attendance, community expectations of SCCC, demand for new or intensified services, perceptions of the quality of SCCC's services, and respondents' characteristics. Study findings, based on an overall response rate of 36%, included the following: (1) services considered most important by the respondents as a whole included maintaining course content and standards, offering certificates and degrees transferable to four-year colleges, and expanding transfer agreements; (2) computer science and data processing were the only areas for which a large demand for new programs was perceived by the respondents; (3) over 75% of the respondents agreed that SCCC represented a wise investment of tax monies, that SCCC presents a helpful and non-threatening image to older residents and re-entry students, and that SCCC has improved the county and widened educational access. The questionnaires and analyses for each respondent group are included in the report. (LAL)

Identifiers—*Economic Impact, Economic Impact Studies

This report on the economic impact of Schenectady County Community College (SCCC) uses a modification of the Caffrey and Isaacs model to assess SCCC-related local business volume, SCCC costs and benefits to the Schenectady County government, and the likely impact on the county if SCCC did not exist. Part I provides background to the study, including information on relevant research, the characteristics of SCCC and the characteristics of the county. Part II presents a summary of the findings and study conclusions, pointing out that the 1981-82 SCCC operating budget was \$5,456,878; that total local business volume related to SCCC was \$8,045,452; that Schenectady County contributed \$798,615 to the SCCC operating budget in 1981-82; and that SCCC provides 205 full-time equivalent jobs and accounts for 406 additional jobs created by the local spending associated with the

college. Part III details SCCC-related business volume, including data on SCCC revenues, local expenditures, local employment, and the population associated with SCCC. SCCC costs to the Schenectady County government are itemized in part IV in terms of capital spending and operating costs. After part V examines SCCC benefits to the county, part VI looks at the net cost of SCCC to the local government. Observations concerning the impact on the county if SCCC did not exist are presented in part VII, followed by information on the methodologies, assumptions, and calculations used in the study. Appendices provide questionnaires and financial data. (LAL)

Academic Standards: The Faculty's Role. An Academic Senate Position Paper: Discussion and Action.

Academic Senate for California Community Colleges, Sacramento.

Pub Date—83

Note—8p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Academic Standards, *College Faculty, Community Colleges, *Educational Quality, Professional Development, *Teacher Role, Two Year Colleges

Identifiers—*Teacher Cooperation

Many community college faculty are concerned with academic standards at their institutions, in part because in the late 1960s and during the 1970s standards became associated, in the minds of many teachers and students, with personal rigidity rather than academic rigor. Faculty who wish to re-examine academic standards with their colleagues should: (1) discuss the nature and function of standards that require faculty to teach the subject matter with appropriate rigor and grant passing grades only to students who demonstrate competency in the subject; (2) have a meeting of faculty teaching a multi-section course, sequential courses, or courses within a particular program to review departmental course outlines or departmental syllabi, catalog descriptions, and ways of implementing the course outlines; and revise the materials or methods as deemed appropriate; (3) consider selecting textbooks or grading papers together; (4) sponsor cross-disciplinary discussions of standards to identify the skills and knowledge faculty members can expect of each other's students; (5) involve part-time faculty in discussions and meetings; and (6) accept responsibility for professionalism and professional growth by keeping abreast of developments in one's field, contributing to the institution, and reassessing course material. Having agreed upon standards themselves, faculty can provide uniform information to students about what is expected of them and insure the provision of an appropriate and rigorous education. (LAL)

Descriptors—Community Colleges, Educational Counseling, Educational Innovation, *Educational Testing, *Evaluation Methods, Program Administration, Program Descriptions, Program Development, *Student Placement, *Testing Programs, Two Year Colleges

Respondents to a 1982-83 survey of assessment practices in California's community colleges identified Sacramento City College (SCC), Fullerton College (FC), Sierra College (SC), and Victor Valley College (VVC) as having the most effective assessment/placement programs in the state. Interviews conducted on-site with at least three staff members involved in program administration, operation, or design at each campus gathered information on program development and testing policies; registration and assessment procedures; reactions to the program from counselors, students, and faculty; components leading to statewide recognition; and future directions. The interviews revealed that, although there were many differences among the institutions and among their programs, there were a number of similarities, including the following: (1) all of the colleges assessed a high percentage of entering stu-

dents; (2) all relied heavily upon the computer, using it to provide a prescriptive printout for students within hours of assessment; (3) all but VVC required specific scores for entering English and language arts courses; (4) all but SC used a standardized assessment instrument; (5) administrative leadership and faculty involvement were important in all colleges; and (6) all schools but SC operated a testing office with opportunity for ongoing assessment. The study report includes profiles of each school's assessment program, summary findings, and appendices showing innovations. (HB)

Examining a 10-year period beginning in 1972-73, this report provides data on the enrollment of full-time students at the four Illinois Eastern Community Colleges according to the high schools from which the students graduated. Introductory material outlines the purpose of the study, discusses findings from previous research, and points to the study's limitations. Next, data from the study are highlighted, including the following findings: (1) in 1972-73, 2,061 students graduated from the high schools in the 10 counties studied, and 447 of the students (22%) enrolled full-time at one of the Eastern Illinois colleges; (2) in 1981-82, the high schools in the 10 counties graduated 1,869 students and Illinois Eastern enrolled 495 full-time students or 26% of the graduates; and (3) in 1973-74, 8 of the 23 high schools provided 65% of the full-time students enrolled in the colleges, while in 1982-83, 71% of the high school graduates enrolled in the colleges came from these schools. The bulk of the report consists of 27 line graphs, a county analysis, and a trend line graph of high school graduates. The graphs show the enrollment of full-time students at each of the four colleges according to high school and provide data on out-of-district, out-of-state, and foreign students. (HB)

Descriptors—*Academic Education, College Curriculum, College Instruction, *College Planning, Community Colleges, Master Plans, *Student Personnel Services, Two Year Colleges

Developed by unit managers in Central Ohio Technical College's Academic Affairs division, this annual plan for 1983-84 attempts to provide the basis for communication with individuals both within and outside the division; unify the campus around shared goals; and review progress. Introductory material describes the development of the program plan, identifies the uses for the document, sets forth assumptions about the planning process and definitions of relevant terms (e.g., goal, objective, and action step), and provides a summary of the annual effort of the Academic Affairs division. Next, work plans are provided for the following areas: (1) Office of the Dean of Academic Affairs; (2) Division Offices for Business Technologies, Engineering and Public Services Technologies, and Health Technologies and General Studies; and (3) academic support areas of admissions, job placement, and student records and registration. For each area, goals, objectives, and activities are specified, and, in most cases, an activity implementation schedule and a list of additional resources needed are provided for each activity. Finally, a calendar of activities for 1983-84 is presented, including projected activities by quarter, in the areas of curriculum, budget, personnel, marketing/recruitment, advisory committees, publications, registration, and reports. Demographic Trends in Missouri's Population and Enrollment Trends and Projections: Master Plan III Assessment Project Report Number Three.

Missouri State Coordinating Board for Higher Education, Jefferson City.

Pub Date—Jun 83

Note—28p.

Pub Type—Reports - Descriptive (141) — Numerical/Quantitative Data (110)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Age, College Bound Students, *Enrollment Projections, Minority Groups, *Population Trends, Postsecondary Education, Rural Urban Differences, State Surveys

Identifiers—*Missouri

Part of an effort to evaluate the 1978 Missouri State Master Plan for Higher Education, this report reexamines the enrollment projections contained in the plan to determine whether those projections are adequate to serve as a basis for statewide higher education planning efforts for the remainder of the 1980s and the early 1990s. The first section of the report describes recent demographic trends related to college enrollments. This analysis indicates that, while the number of young people who will be entering the traditional college-age cohort will decline by over 23% statewide, the change will not be uniform across subregions and will have a differential effect on specific institutions. In addition, the report indicates that changes in the racial mix of the traditional college-age cohort will affect high school graduation and college attendance rates, as will the trend of more rapid growth in the rural population of the state. The next section of the report focuses on enrollment projections, first describing the assumptions used and then reporting a projected statewide enrollment for 1993 that would be 21.5% below that of 1981. A comparison of master plan projections to actual 1980 enrollments and revised projections for 1985 and 1990 conclude the report. (LAL)

Descriptors—*College Transfer Students, Community Colleges, *Enrollment Trends, Postsecondary Education, State Colleges, State Surveys, State Universities

Identifiers—*Missouri, *Reverse Transfer Students

The transfer of students in Missouri is multi-directional; that is, some level of transfer activity occurs between and within each major sector of higher education. The number of student transfers has risen from 15,500 in fall 1979 to 18,000 in fall 1982, with a peak of 20,000 transfers reported in fall 1981. The majority of student transfers (more than 10,000 annually) involve Missouri residents attending public and independent colleges and universities. Of these, approximately 70% occur among public sector institutions. An analysis of transfer activity for the 4-year period from fall 1979 to fall 1982 reveals the relative stability of transfer relationships among and within sectors, with two exceptions: in fall 1980 and fall 1981 there was a significant increase in transfers from public four-year institutions to public two-year institutions, and there was a substantial increase in the number of transfers from independent to public two-year institutions between fall 1979 and fall 1980. In total, transfer students account for 10% of undergraduate enrollment at public and independent institutions, and for approximately 40% of first-time entering students. The greatest percentage of students transferring from the University of Missouri and the state universities transfer to community colleges, and most students transferring to a state college come from a community college. The bulk of the report consists of graphs and tables showing transfer activity and trends. (LAL)

A Taxonomical Analysis of Questions Found in Reading Skills Development Books Used in Maryland Community College Developmental/Remedial Reading Programs.

Pub Date—80

Note—141p.; Ed.D. Dissertation, American University.

Pub Type—Dissertations/Theses - Doctoral Dissertations (041) — Reports - Research (143) — Tests/Questionnaires (160)

EDRS Price - MF01/PC06 Plus Postage.

Descriptors—*Cognitive Development, Community Colleges, *Difficulty Level, *Remedial Reading, *Textbook Evaluation, Two Year Colleges

Identifiers—*Bloom's Taxonomy

A study was conducted to categorize the questions found in the reading skills development books used in Maryland's community colleges according to Bloom's Taxonomy of Educational Objectives. The study sought to determine the number of questions per taxonomy category; whether there was a significant difference between observed and expected frequency; and whether there was a significant difference among the categories. The study involved a survey of community college developmental reading programs, which revealed that 185 different skill development books were being used, and the selection of a sample of 555 questions from these books for analysis. Of the questions, 145 fell into the knowledge category of Bloom's Taxonomy, 400 into the comprehension category, 2 into the application category, and none in the categories of analysis, synthesis, and evaluation. This concentration of questions in the two lowest levels of thinking indicated that very little stimulation of the higher thinking processes was offered via the questions used in the reading skills development books used in the community colleges. The authors and publishers of these books, and the educators that use them need to become more concerned about the higher level thinking development of students, estimate the intellectual capabilities of these students at a higher level, and consider that reading material on a higher level may build reading motivation. Identifiers—*Maryland

Prepared as part of a joint effort by the Maryland State Board for Community Colleges (SBCC) and the Maryland State Board of Education to promote high-quality occupational programs and services, this report provides information on the state's management information system and program data monitoring system. Following the text of a resolution establishing the Joint Coordinating Committee for Occupational Education Programs, the report provides a project summary which outlines procedures and results for three project objectives: (1) to conduct statewide projects, including the preparation of computer files and reports on credit enrollment, degree recipients, graduate follow-up, leaver follow-up, employer follow-up, discipline cost analysis, continuing education, and program inventory; (2) to run the SBCC Program Data Monitoring System and review each of the 396 programs by June 1983; and (3) to publish an in-depth evaluation of 48 community college programs by March 1983 and a statewide evaluation of media/communications programs. Tables provide a statistical summary of program evaluation activities for 1978 through 1982 and identify programs designated for evaluation in 1983. Appended materials provide instructions on using information to support instructional program evaluation, a program implementation and evaluation flow chart, and guidance for users of the Program Data Monitoring System. The Virginia Community College System (VCCS) master plan presented in this report is designed to manage the system and its 23 comprehensive community colleges during the years 1982 through 1990. First, chapter I presents an executive summary of the plan, the process of its implementation, and recommendations for policy changes in key areas. Chapter II outlines the context for master planning in Virginia, and chapter III discusses the VCCS planning process. Chapter IV outlines actions of the State Board for Community Colleges on the VCCS's mission, goals, planning assumptions, and strategic objectives. Chapter V presents methods of plan management and highlights four primary management activities associated with the master plan. After chapter VI describes the organization of the community college system in Virginia and presents major issues facing the colleges, chapter VII provides an overview of educational programs, including new programs recommended for 1984 to 1986. Chapter VIII highlights the VCCS manpower training partnership with business, industry, and government, and presents results from a survey of the role of the state's colleges in serving the training needs of those sectors. Information on VCCS enrollments is presented in chapter IX, while chapters X, XI, and XII contain data on finances and personnel, facilities, and support services. Appendices include a summary of existing and proposed programs and standardized criteria for program planning. (HB)

This master plan sets forth a general strategy for providing administrative and academic computing services and satisfying the data processing requirements for the Virginia Community College System (VCCS) during the 1980's. Following an executive summary, chapter 1 sets forth the purpose of the plan and outlines the planning processes used. Chapter 2 discusses the mission of the VCCS and the role of the computing and data services functions. After chapter 3 establishes guidelines for the VCCS computing services system, chapter 4 provides an analysis of the present situation and existing resources. Chapter 5 looks at assumptions related to the provision of computing services while chapter 6 considers current strengths, weaknesses, opportunities, and problems. The goals of computing services are reviewed in chapter 7, followed by an examination of computing and systems development strategies in chapter 8. Chapters 9 and 10 present organizational, personnel, and financial requirements of the proposed system, and chapters 11 and 12 address the implementation, management, and coordination of the master plan. Performance standards are set forth in chapter 13, followed by a discussion of plan management in chapter 14. Appendices include information on administrative, management, and academic applications; network requirements; service request procedures; hardware and software; time lines; and a glossary of data processing terms. Jones, Steven Wayne

Evaluating the Impact of Freshmen Orientation on Student Persistence and Academic Performance. Applied Educational Research and Evaluation.

Pub Date—1 Mar 84

Note—40p.; Ed.D. Practicum, Nova University. Pub Type—Dissertations/Theses - Practicum Papers (043) — Reports - Evaluative (142) — Tests/Questionnaires (160)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Academic Persistence, Community Colleges, Course Descriptions, Enrollment Influences, *Grade Point Average, *School Holding Power, *School Orientation, Two Year Colleges Identifiers—*Phillips County Community College AR

A study was conducted at Phillips County Community College (PCCC) to analyze the impact of freshman orientation classes on students' persistence and academic performance. The participants in the study were all first-time, full-time freshmen who entered PCCC during the fall 1982, spring 1983, or fall 1983 semesters. During the registration process, students were encouraged to enroll in an 8-week orientation class that included information on academic policies, college regulations, career counseling and testing, placement, financial aid, student services, and study skills. Performance and persistence data were analyzed for an experimental group of 337 students who successfully completed the orientation class and for a control group of 433 students who either did not enroll in or did not complete the class. Study findings revealed that: (1) 79.7% of the experimental group had been retained at the end of one semester, compared to 43.1% of the control group; (2) at the end of one academic year, 45.3% of the fall 1982 experimental group had been retained, compared to 23.2% of the control group; (3) the combined first semester mean grade point average for the experimental group was 2.28, compared to 1.72 for the control group. Based on study findings, increased efforts to enroll freshmen in orientation classes, improvement in the consistency of those classes, and promotion of the classes among faculty and staff were recommended. A review of the literature, a bibliography, and the orientation class syllabus are included in the report. (HB)

The Remedial English Program [and] An Outline of the Compositional Skills Taught as a Continuum through English 111 and 112 [and] English Division Policies for English 111 and 112.

Anne Arundel Community Coll., Arnold, Md.

Pub Date—[84]

Note—8p.

Pub Type—Reports - Descriptive (141) — Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Community Colleges, *Course Content, *Course Objectives, *English Instruction, *Remedial Instruction, Two Year Colleges, *Writing Instruction

Information is provided on the goals, objectives, strategies, and content of four courses in Anne Arundel Community College's English Division: (1) English 001, which teaches structuring of words into sentences that conform to the accepted conventions of English grammar, punctuation, and capitalization; (2) English 002, which teaches the structuring of sentences into paragraphs that are unified in topic and coherent in development; (3) English 111, which teaches a general pattern of composition useful for presenting any complex topic; and (4) English 112, which continues and broadens the skills taught in English 111 and teaches logical argumentation and the elementary skills of research. Following information specific to each course, English Division policies for English 111 and 112 are presented concerning class time allotment, writing assignments, grading policies, and referrals to the English Center. Remedial Math and Language Arts Study: Effectiveness of Remedial Classes in a Rural Northern California Community College District.

Shasta-Tehama-Trinity Joint Community Coll. District, Redding, CA. Instructional Research Office.

Pub Date—Sep 83

Note—14p.

Pub Type—Reports - Research (143) — Numerical/Quantitative Data (110)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Academic Achievement, *Academic Persistence, Community Colleges, *Grade Point Average, Majors (Students), *Program Effectiveness, Program Evaluation, *Remedial Instruction, Remedial Mathematics, Remedial Reading, Two Year Colleges, *Two Year College Students

A study was undertaken to assess the effectiveness of remedial mathematics and language arts classes in a rural northern California community college district. Data related to remedial class completion, following semester return rates, units completed, grade point average (GPA), and declared major were collected for all remedial students taking language arts or mathematics courses in fall 1981, spring 1982, and fall 1982. Study results, based on an overview of the three terms, included the following: (1) in general, during fall terms, 65%-75% of the students completed a remedial class with an A to D grade, and 60%-65% returned for classes the following spring; (2) in the spring, about 60% of the students completed a remedial class and only 45% returned in the fall; (3) the students who completed a remedial class, returned to earn an average of 11.8 units with a GPA of 2.81 and when they returned the following semester they completed an average of 10 units with a 2.84 GPA; (4) students who did not complete the remedial class but did return to the college earned an average of 7.1 units with a GPA of 2.26; and (5) retention for remedial class completers was slightly less than for the student population as a whole. This report provides statistical data for 1982-83 on enrollments, finances, personnel, and services within Mississippi's 15 public junior college districts. After brief introductory material providing an overview of the state's junior college system, the schedule of the meetings of the Mississippi Public Junior Colleges Board of Trustees for 1982-83 is presented. Next, tables offer data on enrollment by class and sex for in-state and out-of-state students; enrollments by college and campus of full- and part-time, day and evening students; and a summary of degrees granted by college, graduate's sex, degree or certificate awarded, and program of study. Tables focusing on income and expenditures indicate sources of revenue by college, student fees and charges by college, county tax support by district and amount spent, educational and general (E&G) expenditures for fiscal year 1983 by function and objective, and percentages of E&G expenditures by function and objective. The last tables cover, by college, faculty salaries by degree held, dormitory utilization, and revenue and expenditures for auxiliary enterprises (e.g., food services, housing, and stores). (HB)

Organization and Leadership of Two Year Colleges: Preparing for the Eighties. Institute of Higher Education Topical Paper.

Florida Univ., Gainesville. Inst. of Higher Education.

Pub Date—Dec 80

Note—35p.

Pub Type—Reports - Descriptive (141) — Opinion Papers (120)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Administrative Organization, *College Administration, Community Colleges, Educational Change, Educational Innovation, Participative Decision Making, Private Colleges, Technical Institutes, *Two Year Colleges

An analysis is presented of the organization and administration of public and private two-year colleges in the United States. Section I highlights the changes that took place within community colleges

in the 1970's in budgeting, the expansion of collective bargaining, and the pressure to provide increased opportunities to minority students. Section II discusses structural models and organizational patterns of two-year colleges, focusing on two extremes: the bureaucratic model, which predominated for the first 50 years of community college development, and the participative model, which emphasizes lateral and oblique communication systems and faculty, student, and staff involvement in decision making. Section III provides a comparative analysis of organizational structures of two-year colleges in terms of administration, business functions, instruction, student services, and the executive function. This section examines the mode of organization and provides examples of: (1) public community colleges in single and multi-unit independent districts; (2) state university systems and branch campuses; (3) state boards for community colleges and state two-year college systems; (4) technical institutes and technical colleges; (5) colleges characterized by innovative patterns of organization, such as non-campus and cluster colleges; and (6) private colleges, including independent and church-related institutions. Effects of Probation Policy on Student Retention at Shasta College: A Study in a Rural Northern California Community College.

Shasta Coll., Redding, Calif.

Pub Date—Oct 82

Note—14p.

Pub Type—Reports - Research (143) — Numerical/Quantitative Data (110)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Academic Probation, *Academic Standards, Community Colleges, Educational Change, *Enrollment Influences, *Student Attrition, Two Year Colleges, Two Year College Students, Withdrawal (Education)

Designed to survey the effects of the current probation policy at Shasta College, this report estimates the student loss attributable to the policy and discusses means of identifying potential probationary students. After introducing the probation policy, which requires at least a 2.0 grade point average to avoid academic probation and the completion of at least 60% of the courses attempted to avoid progress probation, the report discusses the effects of the policy on one group of students placed on probation due to their performance in fall 1981 (F81) and another group placed on probation on the basis of their fall 1981 and spring 1982 performance (S82). The following sections consider the loss of students attributable to the policy and the major characteristics of probationary students, indicating that: (1) only 45% of the F81 group on progress probation returned in the spring 1982, while 58% of the S82 group returned in fall 1982; (2) approximately 80 of the 382 students on progress probation in the F81 group and 47 of the 474 students on progress probation in the S82 group were discouraged from returning because they were placed on probation; (3) the two best identifiers of potential probationary students were attendance at college for personal interest and absence of a clear objective in attending college. Based on study findings, it was recommended that a probation prevention plan be instituted and that progress probation be enforced with a 50% success ratio. (HB)

Integrated Language Skills: An Approach to Developmental Studies.

Lake City Community Coll., Fla.

Pub Date—[84]

Note—14p.

Pub Type—Reports - Descriptive (141) — Numerical/Quantitative Data (110) — Reports - Evaluative (142)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Achievement Gains, *Basic Skills, Community Colleges, *Developmental Studies Programs, Language Skills, *Program Effectiveness, *Remedial Instruction, Teaching Methods, Two Year Colleges, *Two Year College Students, Vocabulary Skills, Writing Skills

A language skills program was developed at Lake City Community College to increase remedial students' chances of academic success in college courses. The program concentrates first on developing students' speaking and listening skills and then proceeds to more complex reading and writing

skills. The program provides 16 weeks of developmental study for academically underprepared students, during which skills in oral communication, listening comprehension, grammar, punctuation, spelling, sentence structure, paragraph writing, reading comprehension, vocabulary development, and study skills are approached in an integrated manner. An evaluation of the program involved two groups of students: an experimental group (N=26) of students who completed the language skills program and subsequently the college's basic English course, and a control group (N=25) of students who completed only the basic English course. The groups were compared on the basis of pre- and post-test measures of vocabulary and reading comprehension, and final grades in the English course. The results indicated that the experimental group performed better on both the vocabulary and comprehension tests and averaged a full letter grade higher than the control group in the English course. Academic/Instructional Computing in the Community and Junior College: Its Role and Its Institutional Implications.

San Diego Community Coll. District, Calif.
Pub Date—Mar 84

Note—10p.

Pub Type—Reports - Descriptive (141) — Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—College Curriculum, Community Colleges, *Computer Assisted Instruction, *Computer Literacy, *Computer Oriented Programs, Computers, *Curriculum Development, Educational Needs, *Management Information Systems, Program Development, Two Year Colleges

With the dramatic growth in the use of computers in recent years, questions have been raised concerning the role of computer education in community colleges. Four principal reasons can be advanced for implementing an academic/instructional computing program: (1) to increase computer awareness among students to prepare them for the growing number of jobs requiring familiarity with computers; (2) to improve instruction through computer-assisted delivery; (3) to optimize the use of resources through computer management in the areas of student testing, tracking, counseling, and curricular resource management; and (4) to develop computer and computer-related skills as part of an effective curriculum. Before implementing an academic/instructional computing program, a college should first develop faculty and staff awareness. Next, the institution's objectives should be defined, the role of computer-assisted instruction assessed, and the costs evaluated. Success in instituting such a program requires dynamic leadership, consistent support, and a large measure of institutional and individual self-confidence. If realistic objectives and sensitive strategies are developed, faculty and staff will take greater pride in their institution, and graduates will be better prepared for jobs and further education. Identifiers—*Corning Community College NY
In late 1983, a study was conducted to examine the continuing education participation and related characteristics of medical technology practitioners in the service area of Corning Community College (CCC). Survey forms were distributed by hospital laboratory managers to all levels of medical technology practitioners in seven local hospitals categorized by size and location. Study findings, based on responses from 71% of those surveyed, included the following: (1) respondents in all hospitals, with the exception of a university-town medical center, were concentrated in the 31-40 year age category; (2) the

larger hospitals had a preponderance of respondents with Bachelor's and Master's degrees, while the rural hospitals had a predominance of Associate degree graduates; (3) journal reading was cited as the most frequent source of new professional knowledge; (4) all of the respondent groups felt that there were too few opportunities for continuing education, though the actual participation rate averaged 76% for the entire sample; (5) all respondent groups chose "wanting to be better at my present job" as their strongest reason for personally participating in continuing education, followed by possible job advancement and salary increase; and (6) respondents over 40 demonstrated the highest participation rate of any age group. The study report includes a discussion of the implications of the findings for CCC program development, a literature review, and the survey instrument. (HB)

Wellsfry, Norval L.

The Economic Impact of the Virginia Community College System from 1966 to 1974.

Pub Date—May 76

Note—141p.; Ed.D. Dissertation, Virginia Polytechnic Institute and State University.

Pub Type—Dissertations/Theses - Doctoral Dissertations (041) — Reports - Research (143)

EDRS Price - MF01/PC06 Plus Postage.

Descriptors—*Community Colleges, Economic Climate, *Economic Factors, *Educational Economics, Expenditures, Income, *School Business Relationship, State Surveys, Two Year Colleges
Identifiers—*Economic Impact, Economic Impact Studies, *Virginia

A study was conducted to measure the economic impact of Virginia's community colleges on the state's business volume, employment, and income between 1966 and 1974; to analyze the degree of change in these factors since 1966; and to compare findings with state and national trends. The colleges' economic impact was measured using a model based on that devised by Caffrey and Isaacs. The impacts on business volume, employment, and personal income were divided into those related to the presence of the colleges and those related to the new money attracted to the state through the presence of the colleges. Wage and hour data, unemployment, personal and per capita income, non-agricultural income, and personal income by place of work were used as indicators of the changes in the performance of the Virginia economic system since the advent of the community colleges. The study found that the expenditures of the colleges had a significant impact on the state's economy. Between 1966 and 1974, the state general fund appropriation to the community colleges totalled \$156,424,000. A business volume of \$278,030,000 was generated by total monies related to the colleges and \$146,521,000 by new monies. By 1974, a total of 11,318 jobs had been generated due to the presence of the colleges. Finally, \$491,648,000 in individual income was generated by community college spending. The study report includes a literature review, conclusions and recommendations. (Author/HB)

Follow-Up of Occupational Education Students: Los Rios Community College District, Spring 1983.

Los Rios Community Coll. District, Sacramento, Calif.

Pub Date—Feb 84

Note—77p.

Pub Type—Reports - Research (143) — Tests/Questionnaires (160)

EDRS Price - MF01/PC04 Plus Postage.

Descriptors—*College Graduates, College Transfer Students, Community Colleges, *Dropouts, Education Work Relationship, Employment Patterns, Followup Studies, Graduate Surveys, Participant Satisfaction, Program Evaluation, Questionnaires, *Student Educational Objectives, Two Year Colleges, *Vocational Education, Vocational Followup

A follow-up study of occupational education students in the Los Rios Community College District (LRCCD) was conducted to obtain information regarding the former students' educational and career goals, employment and educational status, and perceptions of the programs and services offered by the three district colleges. A survey was mailed to 2,700 former LRCCD students who had been enrolled in fall 1981 or spring 1982 in a course designated as occupational and who had not re-enrolled in fall

1982. Two subgroups were studied: those who completed an associate or certificate program (graduates) and those who received no award (non-returning students). Study findings, based on responses from 1,291 (51.8%) of the former students, revealed: (1) about 60% of the respondents had enrolled primarily to acquire or improve job skills; (2) 28% of the non-returning students indicated that their reason for not returning was completion of the courses they needed and 15% cited conflicting job hours; (3) 75% of the respondents were employed full-time, and 40% of the graduates and 30% of the non-returning students were furthering their education; and (4) among the employed respondents, almost 70% were working in a job related to their college courses. The survey instrument, cover letters, and detailed response data are appended. (HB)

Identifiers—*Illinois

Data are presented showing enrollment trends and student characteristics in Illinois public community colleges. Part 1 summarizes statewide fall opening enrollments for 1979 through 1983, emphasizing changes that occurred in fall 1983. This section examines student enrollment by college and instructional program, full-/part-time enrollments, male/female enrollments, enrollments by ethnic origin, and enrollments by age category. In addition, part 1 provides a summary of data and trends for the period. Part 2 presents preliminary data for the winter quarter/spring semester of fiscal year (FY) 1984 and compares these data with information for the same period of 1983. Highlighted findings include the following: (1) the fall opening headcount enrollment for 1983 was 356,643 students, representing a decrease of 31,179 students, or 8%, from 1982; (2) of the 52 colleges in the state, 14 showed increases in enrollment, 31 experienced decreases, and 7 showed little or no change in fall 1983; (3) enrollment decreases were seen primarily in remedial, adult education, and general studies programs; (4) 30.3% of the fall 1983 students were enrolled full-time, compared with 25% for fall 1982; (5) enrollment decreases were experienced in all ethnic categories with the largest percentage of decreases occurring in minority enrollments; and (6) preliminary data for FY 1983 also showed decreases in headcount and full-time equivalent enrollments over FY 1983. In spring 1982, a study was conducted to gather information concerning the 701 students who graduated from Mercer County Community College (MCCC) during the 1981 academic year. Questionnaires soliciting information on employment, education, reasons for attending MCCC, and opinions of the college were returned by 56% of those surveyed. Study findings included the following: (1) 67% of the respondents graduated from career pro-

grams and 33% from transfer programs; (2) 55% attended MCCC to prepare for a new or first career, 28% to complete courses for transfer credit, and 13% to improve job skills; (3) at the time of the survey, 80% of the respondents were employed, with 74% working in positions directly or somewhat related to their program of study; (4) 67% of the working graduates were employed in Mercer County; (5) 49% of the respondents had continued their education in another degree-granting program; (6) 28% were both employed and continuing their education; (7) 70% of those working in a field directly related to their program of study indicated that their MCCC training was very or extremely useful to them in their job; (8) 96% of the respondents indicated they would recommend MCCC to others; and (9) 49% offered suggestions for improving MCCC, primarily in the areas of registration, course offerings, advisement, job placement, and student activities. The survey instrument is appended. (Author/LAL)

Descriptors—College Graduates, *College Transfer Students, Community Colleges, Educational Attainment, Education Work Relationship, *Employment Patterns, Followup Studies, Graduate Surveys, Outcomes of Education, Participant Satisfaction, Questionnaires, Student Characteristics, Two Year Colleges

In summer 1982, a study was conducted at Mercer County Community College (MCCC) to obtain data on the employment status, educational activities, and opinions about the college of 1978 MCCC graduates. Questionnaires mailed to 601 graduates yielded an overall response rate of 41%. Study findings included the following: (1) 61% of the respondents graduated from career programs and 39% from transfer programs; (2) 50% were female and 46% were male (4% left the question blank); (3) Caucasians represented 89% of the respondents, Blacks 8%, American Indians 1%, and Hispanics and Asians .5% each; (4) 89% were employed either full- or part-time, as compared to 90% of the respondents to a survey of 1977 graduates; (5) 59% of the employed graduates were working in Mercer County; (6) the mean annual salary for the graduates was \$16,000; (7) 61% of the transfer program graduates and 83% of the career program graduates were in jobs related to their MCCC programs; (8) 62% had continued their education and 31% had obtained bachelor's degrees; (9) 50% of the graduates of career programs had continued their education; and (10) 84% of the respondents would recommend their academic program to others. The survey instrument is appended. (LAL)

Descriptors—College Choice, College Freshmen, Community Colleges, *Enrollment Trends, Full Time Students, Longitudinal Studies, Majors (Students), *Student Characteristics, *Student Educational Objectives, Student Needs, Two Year Colleges, *Two Year College Students

A study was conducted to analyze and compare groups of full-time students entering Mercer County Community College (MCCC) in fall 1980, 1981, and 1982 to identify any longitudinal differences, similarities or trends among them. Information derived from MCCC's student database and student responses to the Basic Skills Placement Test (BSPT) Student Biographic Questionnaire provided a profile of sources of students; student characteristics;

and students' reasons for choosing MCCC, needs for services, and goals and plans. Study findings included the following: (1) the number of new full-time students decreased from 1,434 in fall 1980 to 1,370 in fall 1981 and then increased to 1,392 in fall 1982; (2) over the 3-year period, patterns of residence for new entering students shifted, with an increasing percentage entering from locations within Mercer County; (3) the 1980 and 1981 groups were composed of 50% males, while the 1982 group had 52% males; (4) there were more younger students represented in 1981 and 1982 than in 1980; (5) the educational level of the students' parents had risen over the 3 years, as had the students' aspirations for their own educational attainment; (6) the BSPT performance of the 1982 group was below that of the previous groups; and (7) more students had immediate plans to work full-time after leaving MCCC, while less were planning to work while attending school. The Student Biographic Questionnaire is appended. (Author/LAL)

A study was conducted at Mercer County Community College (MCCC) to analyze student enrollment according to patterns of graduation, readmittance, and persistence. The years 1978 through 1983 were studied, and comparisons were made for both full- and part-time entrants over 6 consecutive semesters. Non-return rates and changes in program type after 1 semester were examined for 3 consecutive years (i.e., 1980-81, 1981-82, and 1982-83). Study findings included the following: (1) the 1-semester return rate for entering full-time students rose from 78% in fall 1978 to 83% in fall 1982; (2) spring entrants were less likely to return for the fall semester, with return rates ranging from 54% to 57%; (3) the percentage of students who switched from part-time to full-time status increased from 10% in fall 1978 to 15% in fall 1982; (4) the overall full-time student non-return rate declined from 21% among fall 1980 entrants to 17% for the fall 1982 entering cohort; (5) part-time student persistence remained relatively stable across all semesters in spite of a steady increase in part-time enrollment; (6) graduation rates were highest among full-time fall entrants after 4 semesters of attendance; (7) in general, graduation rates were higher for fall than for spring entrants even after 6 semesters of attendance; and (8) the largest decline in non-return rates for full-time students occurred in MCCC's certificate program. A survey of graduating students' immediate plans is conducted annually at Mercer County Community College (MCCC) to meet needs such as compliance with truth in advertising requirements for educational recruitment, accreditation reviews, and faculty and staff advisement. In 1983, questionnaires mailed to 734 potential graduates yielded a 79% response rate. Survey results included the following: (1) 77% of the respondents reported plans

for employment, 57% intended to continue their education, and 44% planned to pursue a combination of education and employment; (2) these percentages were almost identical to the figures for 1982 survey respondents; (3) 89% of those planning to continue their education would do so in a field related to their MCCC program of study; (4) 79% expressed satisfaction with the programs they completed at MCCC; (5) 78% of those planning to continue their education intended to attend an in-state college; and (6) 76% of those planning to work expected to have a job related to their program of study and 66% planned to work in Mercer County. The survey instrument is appended. (Author/LAL)

Descriptors—Academic Persistence, Community Colleges, *Courses, *Enrollment Trends, *Grades (Scholastic), Longitudinal Studies, Statistical Data, *Student Attrition, Two Year Colleges

Available statistical data on student completion of courses at Mercer County Community College (MCCC) were compiled and analyzed for the 2-year period, summer 1981 to spring 1982, and summer 1982 to spring 1983. Two different measures of student enrollment were used: volume measures such as student headcount enrollment, student credit hours generated, passed credit hours, student credit hours that did not result in successful grades, and student credit hours taken for audit purposes; and success indicators such as completion ratios and grade distributions. Study findings included the following: (1) the collegewide course completion rate increased from 74% in 1981-82 to 75% in 1982-83; (2) day students had higher completion rates than evening students; (3) all divisions except the Technology Division exhibited increases in completion rates, with the Humanities and Telecommunications Divisions having the highest increase; (4) overall, there was an increase of A and B grades and a decrease in D and F grades, with the grade point average rising 6% from 2.43 in 1981-82 to 2.49 in 1982-83. The study report provides data on course completion rates by campus, semester, and division; course volume; student success; and grade distribution by division, course discipline, and course. Curriculum Articulation with Secondary Institutions.

Pub Date—2 Apr 84

Note—12p.; Paper presented at the Annual Convention of the American Association of Community and Junior Colleges (64th, Washington, DC, April 1-4, 1984).

Pub Type—Reports - Descriptive (141) - Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Articulation (Education), College School Cooperation, Community Colleges, *Cooperative Programs, *Data Processing, High Schools, Program Descriptions, *Program Development, Two Year Colleges, *Vocational Education

Identifiers—*Chemeketa Community College OR Each year, Chemeketa Community College (CCC) hosts a meeting of secondary school and college administrators to discuss articulation issues affecting high school students, to develop procedures for increasing the smooth transfer of secondary students to the college, and to pursue projects of mutual benefit. An outgrowth of the spring 1981 articulation meeting was the development of the Cooperative Vocational Education Project, which involved CCC and the North Marion School District in an effort to share resources, expertise, and costs in a pilot data processing program. The project involved the following steps: (1) establishing a planning task force; (2) identifying the project's mission, goals, and objectives; (3) planning the curriculum; and (4) implementing the curriculum. Several advantages have accrued from the joint project. Most importantly, high school students have access and the opportunity to learn new vocational skills, have the option to receive high school and college credit for the courses and the flexibility to apply the knowledge and skills to either vocational or academic goals, and have the opportunity to receive current, up-to-date instruction in data processing using the expertise of college faculty. Another benefit, from the tax-payers' perspective, is that costs are reduced as there is no duplication of programs and resources. A final benefit is the positive constructive relationship fostered between the high school and college. (LAL)

Fundamentals of Nursing Science: Units 1 through 8.

Pub Date—84

Note—27p.; Graduate seminar paper, University of California, Los Angeles.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Community Colleges, *Course Content, Course Descriptions, *Course Objectives, *Nursing, *Nursing Education, Two Year Colleges

A description is provided of "Fundamentals of Nursing," a two-year college course designed to introduce nursing students to the basic principles of patient care. First, information is presented on the place of the course in the nursing curriculum, in-class time allotments, and course prerequisites. A section on course content includes a statement of major course goals, a list of unit titles, and presentations of short- and long-range course objectives. Materials of instruction used in the course are outlined prior to descriptions of each of the following eight units: management of the environment, body mechanics, vital signs, care of the mouth, care of the skin, oral medication, parenteral medication, and bowel elimination. Each unit description identifies goals, objectives, required readings, and required audiovisuals. Finally, a section on evaluation presents the grading system for the course, procedures for course revision, and estimates of student attrition and student success in passing the state boards. (LAL)

Descriptors—Community Colleges, *Course Content, Course Descriptions, *Course Objectives, *Nursing, *Nursing Education, *Student Certification, *Test Coaching, Two Year Colleges

A description is provided of a two-year college course designed to prepare graduates from accredited nursing programs to take the California State Board Examinations. A course rationale, information on the curricular placement of the course and the targeted student population, and a glossary of terms are presented first. A description of the long-range objectives of the course (e.g., 80% success rate for students taking the State Boards and 80% employment rate in a nursing-related capacity) is followed by a list of instructional materials, including the required and recommended texts and audiovisual materials. Next, the following course units are described: (1) medical nursing; (2) surgical nursing; (3) obstetrical and gynecological nursing; (4) pediatric nursing; (5) psychiatric nursing; (6) ethical and legal issues in nursing; and (7) life-support techniques. Each unit description includes a short rationale for the unit, statements of goals and related objectives, a description of planned activities, and sample test items. Finally, a section on evaluation outlines the course grading scheme, procedures for course revision, and estimates of the number of students who will achieve the course's objectives and provisions for those students who do not. Nursing 433: Uncomplicated Grief and Bereavement.

Pub Date—84

Note—21p.; Graduate seminar paper, University of California, Los Angeles.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Course Content, Course Descriptions, *Course Objectives, *Grief, Higher Education, *Nursing Education, *Psychological Patterns

A description is provided of "Uncomplicated Grief and Bereavement," a course designed to provide the graduate nursing student with the assessment, diagnosis, planning, intervention, and evaluation skills required to facilitate a normal bereavement outcome among persons experiencing the loss of a significant other. The course description first outlines course philosophy, allotment of class time, target student populations, and anticipated student dropout rate. A course glossary defines the terms "anticipatory grief," "bereavement," "cognitive therapy," "crisis intervention," "grief," and "loss." The next section outlines major course goals related to the counseling of grieving and bereaved clients and identifying individuals at risk for complicated bereavement, and discusses long-range course objectives. A listing of course materials, including texts, general references, and media center materials, is followed by descriptions of the following course units: (1) characteristics of grief and bereavement; (2) precipitants to grief reaction; (3) bio-psycho-social factors affecting bereavement outcomes; and (4) facilitating uncomplicated bereavement outcomes. Each unit description contains an overview of the topic, and lists goals, objectives, sample test items, and readings. Finally, course grading, procedures for course revision, and expectations of students are discussed. (LAL)

Allied Health 100: Growth and Development for Allied Health Majors.

Pub Date—14 Mar 84

Note—40p.; Graduate seminar paper, University of California, Los Angeles.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Allied Health Occupations Education, *Child Development, *Course Content, Course Descriptions, *Course Objectives, Developmental Stages, Grading, *Nursing Education, Two Year Colleges

A description is provided of "Growth and Development," an overview course for two-year college allied health majors which outlines the processes through which the infant, young child, and adolescent mature physically, socially, and emotionally.

First, the course description presents the goals and emphases of the course, curricular placement information, in-class time allotments, the student population served, a course overview, grading procedures, and child observation dates. The following sections present a glossary of terms, information on the rationale for and goals and objectives of the course, an overview of course units, and listings of instructional materials, including texts and audiovisual materials. Next, the five units of instruction are presented: (1) infancy (birth to 1 year); (2) toddler (1 to 3 years); (3) pre-school (4 to 5 years); (4) school age (6 to 12 years); and (5) adolescence (12 to 18 years). Each unit description includes an overview of the topic, goals and objectives for each week's activities, learning activities, and sample test items. Finally, evaluation procedures are discussed, covering the grading scheme for students, procedures for course revision, estimates of the numbers of students who will achieve course objectives, and provisions for students who fail to meet course levels. Pediatric Nurse Practitioner Program: Theories for Extended Pediatric Nursing Practice.

Pub Date—14 Mar 84

Note—26p.; Graduate seminar paper, University of California, Los Angeles.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Child Development, *Course Content, Course Descriptions, *Course Objectives, Higher Education, *Nursing Education, *Pediatrics

A description is provided of "Theories for Extended Pediatric Nursing Practice," a required course for pediatric and family nurse practitioner students in a California state university program. The course description presents information on the curricular placement of the course, prerequisites, in-class time allotments, and the focus of the course on selected theories and concepts from the natural and social sciences applicable to the role of nursing practitioners. Next, the course content is considered in terms of end-of-course and long-range goals and objectives, the units of instruction, and course materials, including required texts, a bibliography of additional readings, and audiovisual materials. Then, descriptions are presented of the 12 course units: (1) assessment of the newborn; (2) advanced concepts in growth and development (0-6 years); (3) advanced concepts in growth and development (7-18 years); (4) immunization principles; (5) accidents and environmental safety; (6) speech and language assessment; (7) nutrition and feeding patterns; (8) laboratory procedures; (9) pediatric pharmacology; (10) common pediatric dermatologic problems; (11) common pediatric ear, nose, and throat problems; and (12) common ophthalmologic problems. Each unit description provides an overview of the topic, specifies goals and objectives, and identifies reading and audiovisual assignments. Finally, course and student evaluation procedures are discussed. (HB)

Identifiers—PF Project

This text consists of a series of classroom handouts created over a two-year period as a supplement to the text used in a junior college music and visual arts appreciation course. These materials are designed to be presented in a one-quarter course in fine arts appreciation for nonmajors who are unlikely to take further courses in either music or painting. Chapters cover the following: (1) an introduction to fine arts appreciation; (2) an introduction to music; (3) the basic fundamentals of music, harmony, and musical form; (4) the meaning and interpretation of music; (5) an introduction to painting; (6) the basics on the use of line, color, texture, form, space, and balance in painting; (7) the major types of media in which art work is executed; (8) the general intention and meaning of paintings; and (9) the unity and diversity of music and painting. Questions for study or for review appear at the end of each chapter. Instructions for student fine arts projects and fine arts term papers are given along with forms to describe the student's plans, for approval by the instructor. A 61-item bibliography on art and music is also included. (JW)

Identifiers—Diversity (Student), PF Project

Diversity is welcomed at the Jefferson Davis Campus, Mississippi Gulf Coast Junior College, where the commuting students include teenagers, retired military personnel, displaced homemakers, the foreign-born, blacks, the full-time employed, and senior citizens. The students are counseled to take a reading and study skills class if their reading test scores indicate a need in the areas of comprehension, speed, interpretation, or study skills. In the first weeks, the objective is to improve the student's self-image along with improvement of reading skills, mathematics skills, or language arts. Activities are planned for adult students which are compatible with their goals and their backgrounds. The instructor of the reading and study skills class emphasizes time use and time organization. In the developmental studies programs, "educationese" is interpreted for divergent populations on a one-to-one basis or in small group sessions. All students are given written competencies for the class, and the order of presentation is determined by the need of the students. The instructor requires that the students give weekly oral and written reports on news items of interest to them and gives the students activities that make direct application of skills to other courses or to life needs. Descriptors—*Comparative Analysis, *Essay Tests, *Multiple Choice Tests, *Test Format, Testing, Test Selection, *Test Theory

Identifiers—PF Project

The decision of whether to use essay tests or multiple choice tests depends on several qualifiers related to the different characteristics of the tests and the needs of the situation. The most important qualifier involves matching the type of test to the instructional objectives being tested, with multiple choice tests being used to measure a grasp of basic facts and essay tests being used to measure the ability to communicate facts concisely. Theoretical differences between the tests include: level of cognitive processing and memory required; testing time spent on thinking versus production; sensitivity to specific learning; level of cognitive complexity which is measured; confounded results caused by student ability in communication skills; and student preparation. Technical differences include range of course content which can be tested; test reliability; and capability of analyzing test items for improvement purposes. Two practical considerations are the time involved in producing, administering, and grading the test and the potential for cheating and guessing. It is important to consider using a variety of evaluation vehicles so that students who are stronger in one response type than another will have equal opportunities to perform well. (DC)

Identifiers—PF Project

While researching the lives of well-known artists for a new unit in an art survey course, the instructor developed the idea of dressing in costume and presenting their lives in the first person. The primary goal of each lecture is to provide memorable information about the artist; a secondary goal is to integrate the social and political climate of the era. The enactments take the first part of the class period; the remainder is used to present examples of the artist's work and to distribute an outline of the lecture content. Evaluations suggest that the unusual presentations have significantly improved student retention. While this strategy is particularly useful in an art class, it is obvious that it also would be effective in other fields of study. The costume seems to be a key; this adds flavor to the lecture even if the instructor does not wish to present first-person characterizations. Props, sound effects, music, lights, and makeup would also add to the characterization. Not only do these one-person mini-dramas give the students and instructor a break from traditional lecture techniques, they give students an unforgettable acquaintance with the abstract personalities in their reading material. FALS: Parent Activities for Learning Basic Skills.

South Carolina State Dept. of Education, Columbia. Pub Date—Jun 79

Note—212p.; Prepared by the Basic Skills Task Force

Pub Type—Guides - Non-Classroom (055)

EDRS Price - MF01/PC09 Plus Postage.

Descriptors—Arithmetic, *Basic Skills, Educational Games, Elementary School Mathematics, *Homework, *Language Arts, Learning Activities, Learning Readiness, *Mathematics Skills, *Parent Participation, Parent Role, Parent School Relationship, Parent Student Relationship, Primary Education, Reading Readiness, *Reading Skills, Reinforcement

Identifiers—*PF Project

Developed for K-3 teachers to send home with their students, this collection of learning activities and games is offered to help reinforce students' language arts and mathematics skills and to enhance parental involvement. Suggestions to the teacher include sending home only those pages containing activities for skills currently being studied and those for which each child needs reinforcement. The format for most of the activities includes skill, materials needed, procedure, variation, source, extension, and/or follow-up. Some of the skills developed by the 47 language arts activities are vocabulary, comprehension, locating words, spelling, punctuation, vowel sounds, consonant sounds, sight words, auditory perception, self-concept, motor skills, visual discrimination, memory, recognition of colors, left-to-right progression, and visual perception. Some of the skills developed by the 47 mathematics activities include recognition of numbers, sequence of numbers, counting objects, writing numerals, following directions, place value, adding, subtracting, problem solving, recognizing geometric shapes, money, time, and fractions. A sample evaluation form for parents, to be sent home with each activity page, is provided as is a resource list of reading and mathematics books, journals, activity kits, and games. (EM)

Constructing Educational Activities. The Best of

BES - Basic Educational Skills Materials.

Wichita Public Schools, Kans.

Spons Agency—Administration for Children, Youth, and Families (DHHS), Washington, D.C.

Pub Date—82

Note—58p.; Prepared by the Basic Educational Skills Project, a collaborative effort between Wichita Head Start and Wichita Public Schools.

Pub Type—Guides - Classroom - Teacher (052)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Basic Skills, *Display Aids, Educational Games, Elementary Education, Enrichment Activities, Instructional Materials, Learning Activities, *Material Development, Mathematics Skills, Puzzles, Reading Skills, *Student Developed Materials, *Teacher Developed Materials, Visual Aids

Identifiers—*PF Project

Designed to help parents and staff members construct educational materials for elementary school students, the document presents over 60 learning activities representing a broad spectrum of skill areas and levels. Several construction tips are followed by a list of materials frequently used in constructing educational activities. Activity descriptions include information about the skill being reinforced, necessary materials, directions for using the activity, and sources of additional information. Each activity is accompanied by an illustration of the completed activity, an activity number, and cross-referencing information. Skills include spelling, vocabulary, alphabetizing, addition, subtraction, multiplication, division, problem solving, oral language, number comparison, visual discrimination, sequencing, reading comprehension, creative writing, identification of prefixes and suffixes, understanding place value, and using reference materials. A list of teacher resources concludes the document. (LH)

Descriptors—Child Caregivers, Child Development Specialists, Childhood Attitudes, *Day Care Centers, Dining Facilities, *Eating Habits, *Food, Guidelines, *Nutrition, *Preschool Children, Preschool Education, *Teacher Role

Identifiers—*PF Project

Practical suggestions for improving the mealtime environment in child care centers are provided for child development personnel. Nine factors to ensure a successful mealtime environment are given along with suggestions for introducing new foods and for encouraging independence and socialization during mealtime. A section dealing with special circumstances such as slow eaters, obese children, allergies, and special diets is followed by ways to encourage children to participate in many aspects of the meal including planning the menu, growing the food, preparing the food, decorating and setting the table, and cleaning up. It is recommended that a statement of nutrition philosophy for a child care center be formulated. (A sample philosophy statement is included.) (JH)

Identifiers—*Emergencies, PF Project

Recommended procedures for handling emergency illnesses and accidents are provided in this guide for school personnel prepared by the North Dakota State Department of Health. Following five general recommendations for steps to take in emergency situations, advice and techniques are given for handling: nose bleeds; abdominal pain; toothaches and broken teeth; cuts, abrasions, and lacerations; headaches and head injuries; convulsions; foreign bodies in ears, nose, and throat; bites by animals, snakes, or insects; eye injuries; frostbite; burns; bleeding; loss of consciousness and shock; and broken bones and suspected spinal injuries. A list of necessary health room equipment and first aid supplies is included. A page of general recommendations covers the administrative procedures and policies schools should develop for emergencies. A page on which to record emergency telephone numbers concludes this guide. Identifiers—*Parent as a Teacher

Originally conceived as an adjunct to the publication "A Planning Guide to the Preschool Curriculum," this home activities guide can be used by any parent of a young child. The guide consists of 44 units (each centered on a specific concept) designed to provide a variety of cognitive, sensory, and motor experiences. Most of the home activities require parent participation and have been chosen to enhance parent/child interaction as well as the child's skills. Typical of the activities included are "Body Parts," "Buildings," "Autumn," "Pets," "Winter Holidays," "Kitchen," and "Things We Do." A short list of related children's books has been appended to each of the units. In loose-leaf format, most units are compact enough to permit duplication for distribution to parents. Activities require items commonly found in most homes. (RH)

Provided in this document are detailed abstracts of studies in the areas of human development, and marriage and family relations. Studies were completed in the Department of Child Development of the Faculty of Home Science, M. S. University of Baroda, India. The first section, on human development, describes studies of physical, motor, and mental development; cognition and moral development; socialization and personality in childhood and adolescence; and assessment measures. The second section, on marriage and family relations, summarizes studies concerning preparation for marriage; adjustment in marriage and family relations; development of a resource materials kit for a course on marriage; childrearing practices and education for mothercraft; and understanding of children and families in the ecological settings of tribes and the urban poor. Appendices list studies abstracted for the volume and publications based on the reported investigations. (RH)

Descriptors—Child Abuse, *Child Neglect, Data, *Evaluation Methods, Federal Regulation, Field Tests, *Program Evaluation, Records (Forms), Research Problems, Standards, *State Programs Identifiers—Federal Standards, *Federal State Program Congruity, *Washington

The National Center on Child Abuse and Neglect funded a project to develop and field-test an evaluation procedure that could be used by interested states or communities to determine the extent of congruity between (1) their provisions for responding to the problems of child abuse and neglect, and (2) provisions prescribed in the Federal Standards on the Prevention, Identification, and Treatment of Child Abuse and Neglect. Assuming the reader's familiarity with the 1976 federal standards, volume 1 of this evaluation report describes project objectives, methodology, and field-testing; presents a recommended Baseline Evaluation Procedure (BEP); and includes two papers elaborating evaluation issues emerging during the course of the research. Issue papers are entitled "Evaluation of Broad-Scale Service Networks" and "Problems of Estimating Service Accessibility." Also assuming familiarity with the standards, volume 2 presents results of a test application of the BEP in Washington State. Aspects of the standards pertaining to local areas were tested in three counties chosen to represent population variation from the largest to the smallest. For each of the 525 items of the standards, information on the following questions was sought: (1) Was the state of local provision consistent with the standards? (2) If not, in what way did it vary? (3) Were there plans to change current provisions? and (4) What problems would have to be dealt with successfully in order to accomplish the planned changes? The data are presented both in an evaluation summary format for each section of the standards and in their raw form. (RH)

The major part of this preschool curriculum planning guide consists of 44 units focusing on six areas of skill development: fine motor, gross motor, social, self-help, language, and cognitive. Introducing the units are brief discussions of the curriculum in general and the unit approach to instruction. Most units include approximately five lessons, each lesson having two basic parts: the unit group lesson and other activities in the curriculum. Unit group lessons incorporate a hierarchy of basic skills ranging from oral language and discrimination responses to abstract reasoning. Other activities in the curriculum include procedures associated with music, art, snacks, games, fine motor development, storytelling, gross motor development, cognitive skills, enrichment, field trips, and visitors. Instructional resources such as children's records and books and parenting materials are listed at the end of each unit.

Appendix 1 provides examples illustrating preparation of instructional objectives, task analysis in the preschool and for the handicapped, and error-free learning techniques such as positive reinforcement. Appendix 2 describes figure-ground discrimination and path tracing tasks, the use of cue sheets for matching tasks, art activities for young children, and home follow-up activities. A form for charting accomplishments of children performing unit activities is provided in appendix 3. (RH)

Breakthroughs in science and social organization could soon be helping to save the lives of half the 40,000 young children who now die every day. They could also prevent several million children a year from becoming mentally or physically disabled. To achieve these goals, local successes showing that a child health revolution is possible must be translated into intensive national campaigns. The challenge is now primarily political rather than technical or financial. Primary health care makes such a revolution possible; education, communication, and social organization make it practicable. Growth monitoring, oral rehydration therapy, the promotion of breast-feeding, and expanded immunization are the four techniques making this revolution affordable even in the midst of economic recession. These techniques are low cost, presently available, and almost universally relevant; in addition, they achieve rapid results and empower those they serve. Three additional but more difficult and costly interventions that could reduce child deaths and child disabilities by two-thirds within 10 or 15 years involve (1) more food for at-risk women and children during pregnancy, breast-feeding, and weaning; (2) more choice for women regarding both the size of their families and the interval between births; and (3) more education to increase women's access to vital information. (Included are brief descriptions of successes and problems of health programs in 15 countries.) (RH)

Identifiers—*National School Volunteer Program

Introductory material provided in this document states the mission of the National School Volunteer Program (NSVP), lists background trends related to community/school partnerships in education, and offers reasons for increasing the role of volunteers in schools. Subsequent material provides examples of programs based on cooperation and interaction between business and schools. Programs specifically described include (1) corporate involvement in Houston public schools; (2) a summer intern program for teachers in San Francisco; (3) a business/school partnership for training teachers in Fairfax County, Virginia, to use new technologies; (4) the economic education program of the Pinellas County, Florida, Chamber of Commerce; and (5) vocational training in Maryland public schools. Concluding discussion focuses on the management of a school volunteer program in rural Maine; benefits for businesses, schools, and students; essential conditions for program success; and leadership skills required of corporate volunteer managers. Identifiers—Allocated Learning Time

Recommending that every state increase the duration and intensity of academic learning time (ALT) in schools, this working paper provides a rationale, discusses related research, offers guidelines for selecting and implementing activities, and describes actions schools can take to implement change. In the discussion, duration refers to the total amount of time students are engaged in learning, intensity refers to the quality of that engagement, and ALT is defined as the amount of time students are engaged in an academic task that they can successfully perform. It is asserted that research findings generally indicate the more ALT a student experiences the more the student is learning. Specific research discussed focuses on ALT and student achievement, the relationship of instructional processes and classroom environment to student learning, the distinction between allocated time and engaged time, and approaches taken to improve the duration and intensity of time used in schools. Educators are urged to (1) use existing resources to help teachers understand ALT; (2) reward exceptional students and teachers; (3) provide aides, volunteers, or tutors to teachers attempting to improve ALT; (4) implement training to improve teachers' knowledge of effective instructions; (5) reduce classroom interruptions; and (6) check for discrepancies between how time should be and actually is spent in classrooms. Federal Campaign, Congress 98th, Office of Personnel Management, Planned Parenthood Federation,

Reagan Administration

Presented in this report is an account of the attempt made by the Director of the United States Office of Personnel Management (OPM) to exclude the Planned Parenthood Federation of America (PPFA) from participation in the Combined Federal Campaign (CFC). The CFC is the annual charitable fundraising drive conducted among federal employees and military personnel. Topics addressed in the report include the development of the CFC, controversy concerning the admission of advocacy organizations in the CFC; conflict between the OPM and the PPFA during 1982, conflict between the OPM and the PPFA during 1983, questions the OPM required the PPFA to answer in an attempt to discover some technical flaw in their application, and problems relating to the existence of a double set of guidelines for accounting and financial reporting. The report concludes that women have a constitutionally protected right to terminate pregnancy through abortion and that the Director's effort to ban the PPFA on the basis of its support of that right is improper. Most of the report consists of 20 appendices containing related materials such as correspondence, memoranda, transcripts of proceedings, and records of court litigation. (RH)

1981, Omnibus Budget Reconciliation Act 1981,

*Project Follow Through

The Committee on Education and Labor strongly recommends the adoption of H. R. 2148, a bill that, with two major additions, would basically reenact Project Follow Through for an additional year as it is currently authorized under the Omnibus Reconciliation Act of 1981. The two additions would provide for review and evaluation of what has been learned from Follow Through during the past 15 years. Substantial sections in this report provide (1) an introduction briefly describing the origin of Project Follow Through and providing a rationale for its extension; (2) a description of the legislative history of the project; (3) a discussion of legislation considered by the committee; (4) the Congressional Budget Office cost estimate for the proposed extension; and (5) changes in existing law made by the bill. Sections of Title I of the Economic Opportunity Act of 1964, Title VI of the Omnibus Budget Reconciliation Act of 1981, and Title VIII of the Native American Programs Act of 1974 are included. These sections focus, respectively, on Follow Through, community services, and Native American programs. (RH)

This document describes an activity-based, independent-study, introductory survey course intended to help child caregivers in caring for mildly to moderately handicapped children in day care settings. Course materials consist of an audiotape cassette and a supplementary handbook; the handbook and a transcript of the audiotape are included in the document. Contents of the course are organized in 14 sections focusing on the following topics: mainstreaming; special needs children; developmental delay; speech and language development; cognitive development; social and emotional development; low incidence handicaps; observing and recording behavior; goal setting; task analysis; the learning environment; involvement with parents; and considerations regarding referrals, legal responsibility, and community resources. The audiotape provides definitions of basic concepts, general information about development, and guidelines, additionally describing specific techniques for responding to the needs of handicapped children. Each section of the handbook provides handouts and activity sheets and is coordinated with a segment of the cassette tape. (RH)

This document discusses research and thinking about several countries' experiences in providing early childhood education and services, and additionally, describes current early childhood education in the Australian states and territories. Following the first chapter's brief provision of background information about preschool education in Australia, the second chapter offers a research review. Research described focuses on the state of the art, the importance of early childhood, children at risk, language, cognitive development, teaching strategies, teachers, child/staff ratios and group size, Head Start and other U.S. programs, parent education, coordination of services, and Australian research studies. The third chapter describes the experience of countries other than Australia in terms of historical perspectives and current developments. Discussion closing this chapter explores several issues, including setting priorities, structuring children's early experiences, accountability, benefits of preschool, administration, parent involvement, and implications of women's changing role for early childhood services. The fourth chapter explores the Australian situation, providing a national overview and specific discussions concerning each state and territory. Additionally discussed are current practices, preschool curriculum, special groups, teachers and teacher education, aboriginal preschool education, preschool education in multicultural Australia, and the role of federal government in early childhood services. A brief depiction of possible future developments is provided in the fifth and final chapter. (RH)

Descriptors—*Childrens Games, *Educational Games, Elementary Education, Group Activities, Movement Education, Physical Education, *Playground Activities, *Playgrounds, Sex Differences, Student Behavior, Teacher Role

Identifiers—*Australia (Brisbane)

A study of the games played by children in Brisbane, Australia was conducted to provide information for physical education curriculum development and to compile a descriptive record for the period from 1975 to 1976. Attention was given to physical activities in which two or more children proceed with observable rules of conduct toward a predetermined outcome whereby winners or losers can be determined. Observed were basic play characteristics such as walking and dodging, play elements such as strategy and chance, the area of play, quality of touch, and group characteristics. To ensure that all areas of Brisbane were included in the survey, one state school was randomly selected from each of the 21 electoral wards of the city. The population of the sample was 10,797; 4,824 children were observed in game situations. Specific results were found for the following game characteristics: playground versus syllabus games, sex differences, group characteristics, behaviors in adventure and traditional playgrounds, and game location. Ten appendices compose the major portion of the study report; these describe numerous games, including ball, pursuit, skipping, clapping, hopscotch, and marbles. (RH)

Identifiers—Minnesota, Self Care, Sibling Care, Usage Patterns, *User Characteristics, Virginia

Provided in this report are data on school-age child care in Virginia and Minnesota for the 1981-82 school year. Minnesota and Virginia were selected for study because of the prevalence of programs for school-age children, the rural/suburban/urban contrasts that could be made, the female labor force participation rates, and the adequate numbers and other population demographics of

PS 014 166

families with school-age children. Specific objectives of the study were to (1) describe the child care use patterns among families with varying demographic characteristics and with children of various ages; (2) explore parental satisfaction with current care; (3) describe how families find and select care; (4) explore the circumstances of and attitudes toward self- and sibling care; and (5) describe the community context for school-age care and explore ways in which communities meet their child care needs. Data were collected in the following ways: computer-assisted telephone interviews with a random sample of almost 1,000 households having school-age children; face-to-face discussions with parents, children, day care providers, and state and local officials; and group discussions with parents. Findings, based primarily on results of the telephone survey, indicate overall similarities between the two states. Additional findings are summarily discussed. (RH)

Identifiers—*Social Interaction

A total of 28 middle class preschool children ranging in age from 3.5 to 5.5 years participated in a study designed to identify characteristic behaviors of children differing in their social acceptance by peers. Indexes of social acceptance and rejection were obtained through a peer nomination procedure based on queries about most and least preferred playmates. Acceptance and rejection scores were used to assign subjects to four social status groups: popular, rejected, controversial, and neglected. Each child's interaction in a setting promoting social play was observed and videotaped on three occasions for a total of 60 minutes. Children interacted in triads: on one occasion the target child was an "intruder" into a dyad, and twice the target child was a member of a dyad intruded upon. Three aspects of social interaction were coded and analyzed: (1) children's direction of communication toward others, (2) the types of initiations children made to each other, and (3) the types of responses children made to the initiations of others. For each of the four social status groups, distinct patterns of social interaction and communication were found. Results indicated patterns of social interaction leading to social acceptance, rejection, and isolation. (Implications of the findings for remedial intervention by teachers are discussed.) (RH)

Descriptors—*Concept Formation, Early Childhood Education, *Grade 1, *Kindergarten Children, *Measurement Techniques, Measures (Individuals), Pattern Recognition, *Social Studies

Identifiers—Louisiana State University

Specific objectives of this study were to (1) obtain information about the pattern of young children's social studies concept attainment, (2) compare basic concept attainment with social studies concept attainment, and (3) compare basic concept development of children from two age/grade levels. A total of 24 kindergarten and 28 first graders of middle socioeconomic status were interviewed individually during a 35 to 45 minute session. The assessment instrument consisted of two sets of tasks: those measuring social concepts and those measuring basic

concepts. No significant differences were found for race or sex. However, significant differences were found between the two grades in both total basic concept and total social concept scores. First graders obtained higher scores than kindergartners on both measures. It was also indicated that knowledge of social concepts developed in tandem with basic concept growth and that concept development remained about the same from kindergarten to first grade. Results suggested that this line of research will provide needed clarification of the parameters of young children's social studies concepts and provide empirical information to guide the choice of key concepts for social studies instruction. Included in this proceedings is a schedule of activities and the text of addresses made at a one-day institute for educators. Dr. Asa Hilliard of Georgia State University delivered the keynote address, which focused on the power of teaching to make a difference. Ten additional topics were addressed in four subsequent sessions. Papers given in the first and second sessions included (1) "The 'Warm Fuzzies' against the 'Cold Pricklies' in the Battle for the Whole Child," (2) "Lizards, Language, and Leprechauns: Learning Activities for Children Ages 3-5," (3) "Working with Handicapped Children," (4) "Infant Settings," and (5) "Economic and Creative Nutrition for Young Children." Papers given in the remaining two sessions included (1) "Encouraging Decision-making in Your Children," (2) "Communicating with Parents," (3) "Storytelling Techniques," (4) "Identifying Speech and Language Disorders in Young Children," and (5) "Inexpensive and Creative Learning Materials/Activities for ages 3-5." Descriptors—*Academic Achievement, *Bilingual Education, Case Studies, Elementary Education, *Elementary School Students, *Language of In-

struction, Language Proficiency, Mathematics Achievement, *Multilingualism, Primary Education, Reading Achievement
Identifiers—Canada, Ireland, Mexico, Nigeria, Philippines, Sweden, United States

This paper discusses the question of whether, in a multilingual society, the child's first or second language is best as a language of instruction in primary school. Reviewing eight case studies from seven countries in which initial primary schooling was given either in the second or first language, the discussion compares achievement in reading and language in both languages and describes achievement in content subjects, especially arithmetic. Case studies from the Philippines, Ireland, and Canada report the use of a second language as the language of instruction, while studies from Mexico, Nigeria, Sweden, and the United States report use of the first language. It is concluded that, depending on the interrelated characteristics of each situation, answers must be found on a case-by-case basis. Such characteristics include the linguistic and cognitive development of the child in his or her first language, the attitudes of parents toward the language chosen for the school, and the status of the languages in the wider community. In terms of these characteristics, situations are described in which the best choice for initial instruction might be either the child's first or second language. These descriptions are followed by a discussion of issues raised in a paper (1980) devoted to education sector policy and by a series of recommendations for World Bank staff. (Author/RH)

Descriptors—*Affective Behavior, *Autism, Observation, *Parent Child Relationship, Research Methodology, *Social Behavior, *Young Children

Identifiers—*Dyadic Interaction Analysis, *Social Interaction

The affective relationship between six male and one female preschool-aged autistic children and their parents was studied by employing a method enabling systematic analysis of parent/child interaction. Children ranged in age from 3 years, 7 months to 6 years, 4 months. Through use of the Bank Interaction Coding System (BICS), behavioral sequences of affective expression between autistic children and their parents were identified and described. The nature and quality of each person's responses were considered within the context of the other individual's actions. Additionally, periods of nonrelatedness were examined, and antecedent and consequent parental affective behaviors were described. Sequences of affective patterns in mother/child and father/child dyads, as well as task differences, were compared and contrasted. Severity of children's symptomatology ranged from essentially no communication and minimal relatedness to moderate use of language and some relatedness. Results suggested that (1) autistic children do display and maintain affective interaction with parents, and (2) episodes of nonrelatedness are of relatively short duration and do not predominate in interaction with either mother or father. It was concluded that findings demonstrated the potential value of the BICS.(RH)

Descriptors—*College Admission, *College Curriculum, *College School Cooperation, Educational Quality, *Enrollment Influences, *Enrollment Trends, Higher Education, Secondary Education
A review of college admissions standards and practices during the past 25 years illustrates the degree to which higher education has influenced cur-

riculum characteristics at the secondary school level. The cooperative relationships that existed between the two sectors in earlier years gave way to campus pressures in the mid 1960s. College enrollments expanded, and priorities shifted from high school/college articulation matters to student restlessness, impatience, and activism. By the early 1970s, campus activists had gained a strong influence on college curriculum and grading systems. Higher education became more stable in the mid-1970s, while high schools became more flexible by incorporating less demanding curricula. College and high school pendulums were thus out of synchronization. In the late 1970s and today, college academic demands are frequently too severe for the quality of students admitted. At this point, local initiatives guided by flexible models, visible incentives, and standardized displays of results should be encouraged so that students and educators are motivated to exceed rather than conform to minimum standards. Descriptors—Educational Assessment, *Educational Quality, Elementary Secondary Education, Higher Education, *Student Teaching, Teacher Certification, *Teacher Education, *Teacher Effectiveness

Few positive comments about the way the nation prepares its teachers have been made. Many teacher education programs are in disarray due to inept staff and curricula that have not kept up with research results. In addition, many state agencies have set teacher certification requirements that are political in nature. From current analyses of teacher education and recent research on effective teaching and learning, one can derive at least 10 criteria by which to judge the quality of teacher preparation programs. These criteria can serve as guidelines for the redesign of teacher education. In conclusion, the reform of education and the improvement of teacher education must go hand in hand. (BJD)

Descriptors—Age Differences, Early Experience, Family Environment, Higher Education, Preschool Education, *Preschool Teachers, *Student Teachers, *Teacher Background, *Teacher Behavior, Teacher Effectiveness, *Teaching Methods, *Teaching Styles

The purpose of this study was to investigate relationships between early family experiences of student teachers and observed teaching behaviors in preschool settings. A total of 109 students enrolled in teaching practicums at two locations completed a background information questionnaire. Subjects' teaching behaviors were noted by trained observers using the observer rating scales developed by McDaniel, Lohman, and Little (1973). Two teaching factors, teaching style and teaching technique, emerged from a factor analysis of nine teaching behaviors measured. Pearson product-moment correlations and a canonical variate analysis indicated that student teachers' academic majors were related to teaching technique and that some, but not all, of the early family experiences measured were related to teaching style. The saliency of the relationship of family experiences to teaching style was influenced by the age of the subject at the time those family experiences occurred. (Author/RH)

Action Theory Perspective in Research on Social Cognition.

Technical Univ. of Berlin (West Germany).
Pub Date—84

Note—45p.; Earlier version of this paper was presented at Planning Conference on Child Development in Life-Span Perspective (Berlin, West Germany, July 9-11, 1981).

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Adolescents, Adults, Children, *Cognitive Development, Interaction, *Research Methodology, *Social Cognition, Theories, Trainees, Trainers

Identifiers—*Action Theory, Goal Directed Behavior, Referential Communication, Social Interaction, *Theory Development, Traffic Behavior

The primary aims of this paper are to (1) clarify what is meant by an action theory perspective on the study of human development, and (2) report a series of developmental studies focusing on social cognition. In particular, it is pointed out that theories, methodologies, and empirical strategies realize an action theory perspective if human beings are assumed to be potentially reflective and to act intentionally with reference to the environment. An action theory perspective on psychological development regards development itself as actively initiated through intentional, goal-directed actions and interactions of the developing subjects themselves. Methods consistent with the perspective include a combination of systematic observations and self-confrontation interviews. Specific studies reported were undertaken in three interaction contexts to evaluate the role of thinking about action. Contexts involved action accompanying social cognition in children's traffic behavior, in referential communication between parent and child, and in trainer/trainee interaction between adults and adolescents. Concluding remarks focus on potential contributions of the redefinition of social cognition as thinking about action. (RH)

Descriptors—Career Ladders, *Educational Innovation, Elementary Secondary Education, *Master Teachers, *Public Schools, Salaries, *State Programs, *Teacher Evaluation

Identifiers—*Master Teacher Program, *Teacher Competencies, Tennessee

Tennessee's Better Schools Program includes a Master Teacher Program that has three components: teacher education, clinical supervision of beginning teachers, and a career ladder based on performance. In conjunction with the establishment of the Master Teacher Program, 23 master teacher competencies for teacher evaluation have been defined. Competencies fall within one of four domains: planning, teaching strategies, classroom management, and professional development and leadership. A list of these competencies was sent for review to the 5,000 members of the Tennessee Teachers' Study Council. Teachers indicated whether and to what degree the identified competencies were important, clarified wording, and added other competencies. The list was revised and returned to the teacher leaders to share with school faculty in all 1,700 schools within Tennessee. Teachers were again asked for comments and suggestions. At present, the list has been revised for the third time and is now being reviewed by scholars and others in Tennessee and across the country. To evaluate teachers on the basis of such competencies, it has been suggested that evaluators should (1) clearly define evaluation criteria; (2) plan for continuous, long-term evaluation; (3) provide for mixed teams of observers; and (4) require rigorous evaluations. (RH)

Parental Background: Does It Matter in Parent Education?

Pub Date—[79]
Note—22p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Anglo Americans, Blacks, Comparative Analysis, *Cultural Differences, *Ethnic Groups, Mexican Americans, *Mothers, *Parent Background, Parent Education, Program Development

opment, *Social Differences, *Socioeconomic Status

Identifiers—*Parent Behavior

To better plan parent education programs for families from different ethnic and socioeconomic backgrounds, the Parent As a Teacher Inventory (PAAT) was used to identify similarities and differences among 114 Anglo-, Black- and Mexican-American mothers from upper, middle, and lower class intact homes in greater Phoenix, Arizona. Each of the subjects had a child enrolled at second-grade level in one of seven elementary school districts in the metropolitan area. Subjects' PAAT scores were analyzed by an analysis of variance. Where significance was found at .05 or less, the Scheffe-Test was performed to identify the source of significance. For subsets with significant variance, a Chi-square was employed to identify particular items responsible for variance among subjects. Findings identified significant differences among mothers as a function of ethnic background and/or socioeconomic level. Significant differences were found between Anglo and Black mothers on four of the five PAAT subsets and on the total PAAT; Anglo responses were found to be more consistent with the values promoted in child development research than were the responses of Blacks. Among socioeconomic groups, significant differences were found on all five PAAT subsets and on the total PAAT. (In tables throughout the text, global differences among parental groups are particularized in terms of specific behaviors program developers can use to help families of diverse ethnic and socioeconomic backgrounds.) In outline form, this document provides summary statements of provisions contained in California's legislation SB 813, otherwise known as the Hughes-Hart Educational Reform Act of 1983. While SB 813 addresses issues concerning school finance, the minimum school year, employees, course requirements, apprentices, and taxation, this summary deals with three areas of provision: finance, instructional programs and student discipline, and employee provisions. A total of 21 finance provisions, 14 instructional program and student discipline provisions, and 6 employee provisions, covering a wide range of programs and policies, are included in the document. Selecting Appropriate Literature for the Preschool Child: Life without Fairy Tales. Research Paper.

Pub Date—[82]

Note—14p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Children's Literature, *Class Activities, *Cognitive Development, *Early Childhood Education, *Fantasy, *Psychological Needs, *Selection, *Young Children

Identifiers—*Piagetian Theory, *Preoperational Thought

Piaget noted that young children cannot think in a logical fashion, objectively, or about hypothetical situations. These limitations of preoperational thinking render the young child dependent upon or bound by perceptions. Overreliance upon perceptions results in children's inability to distinguish fantasy from reality. Young children's unrealistic perceptions give rise to irrational fears of abandonment; attacks by wild animals hiding in closets or under beds; being alone in the dark; and/or witches, ghosts, and dragons. These characteristics of young children's thinking have significance for educators and parents selecting appropriate literature for children under the age of 7. The first challenge for selection is to provide literary experiences that will instill pleasure of reading and help allay irrational fears.

The second challenge is to provide related activities (e.g., creative dramatics, role playing, puppetry, and creative writing experiences) to establish a sense of continuity between what is read to the child and what is actually experienced. Selecting appropriate literacy experiences and providing related activities can promote optimal development if children's cognitive capabilities and emotional needs are taken into consideration. Unfortunately, educators often misinterpret, misapply, or ignore Piaget's theory when selecting literature for young children. (RH)

Identifiers—New York (Elmira), New York State Regents

A survey was made of the attitudes of school personnel toward specific dimensions of the Regent's Action Plan for improving education in the State of New York. Responses revealed (1) a strong negative reaction to the proficiency requirement in foreign language, (2) support by elementary teachers for an increase in secondary testing requirements and support by secondary teachers for an increase in elementary testing requirements, (3) lack of support by secondary teachers for an interdisciplinary project, (4) opposition to remedial programs, (5) support for reporting test results to the public and the state, and (6) opposition to an extension of the school year. Overall, reports from the field, as evidenced by the regional meetings conducted by regents throughout the state, indicate support for the action plan. (BJD)

Descriptors—*Advantaged, *Early Childhood Education, *Intelligence Quotient, *Interpersonal Competence, *Kindergarten Children, *Outcomes of Education, *Preschool Children, *Preschool Education

As part of a study to investigate the immediate and long term effects of preschool upon educationally advantaged children, data from three waves of preschool-age subjects (N=291) and followup data on two waves of kindergarten-age subjects (N=171) were analyzed. All children in the sample were determined to be educationally advantaged, and all demonstrated remarkable intellectual capabilities. Five measures were selected for preschool testing. These included (1) the Test of Motor Abilities for Young Children, (2) the Slosson Intelligence Test, (3) the Gesell School Readiness Test (GSRT), (4) the Early Childhood Self-Concept Index, and (5) the California Preschool Social Competency Scale (CPSCS). For kindergarten testing, two measures were employed: the CPSCS and the GSRT. Findings indicated variation of mean I.Q. scores across all three waves favoring subjects who had attended preschool. In the first two waves of preschool subjects, variation between experimental and control groups on the social competency measure was also found to favor those who attended preschool. In kindergarten, social competency gains were shown by children who had attended preschool as well as by those who had not. However, significantly greater gains were made by females who had not attended preschool. Further study is being conducted to determine whether these differences can indeed be attributed to preschool attendance. (Author/RH)

Descriptors—*Dance Education, *Early Childhood Education, *Educational History, *Movement Education

Identifiers—*Twentieth Century

Highlights of the historical development of structured and creative/free dance experiences for children within the curriculum of early childhood education in the 20th century are sketched. Although some educators dissented with the practice, in the 1920s most dance activities for young children were structured. The following decade was characterized by a gradual shift toward freedom of movement and a recognition of individual rhythms. In the 1940s, during World War II, there was a hiatus in developing new creative movement programs. The 1950s brought an emphasis on freedom of movement that extended to the nursery school level. Exchange of ideas between early childhood educators and dance educators began to increase during the 1960s. In the 1960s and early 1970s, dance experiences were characterized by freedom combined with a small amount of structure. Presently, early childhood and physical educators agree with the idea that movement (1) plays an integrated part in the curriculum for the young child; and (2) should be construed as a way of knowing, finding out, testing, and expressing oneself that is reciprocally and causally linked with feelings. Descriptors—*Daughters, *Infants, *Parent Attitudes, *Sex Differences, *Sex Stereotypes, *Sons

Identifiers—*Femininity, *Gender Identity, *Masculinity

Parents of firstborn male and female infants completed questionnaires concerning their perceptions of their infants. One question focused on how important it was for their children to become either very masculine or very feminine. It was predicted that the less parents stressed the importance of gender appropriateness, the less they would view their children in a traditional sex-stereotyped fashion. This prediction held true only for fathers of girls. Mothers of girls actually showed a trend toward the opposite tendency, while mothers and fathers of boys revealed no distinct overall patterns. For fathers but not for mothers, ratings of the importance of their children's developing gender appropriateness, independence, and high achievement were significantly positively correlated. More research developing and refining the concept of parental cognitive commitment to the sex of the child was recommended. (Author/RH)

Longitudinal Follow-Up Assessment of Differential Preschool Experience for Low-Income Minority Group Children.

Pub Date—[83]

Note—40p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Academic Achievement, *Black Youth, *Comparative Analysis, *Early Experience, *Followup Studies, *High School Students, *Longitudinal Studies, *Low Income, *Minority Group Children, *Preschool Education, *Secondary Education, *Sex Differences, *Student Attitudes

Identifiers—*Distar, *Project Head Start

Urban high school minority group students with different preschool program histories were compared with controls on measures of school achievement, school sentiment, and perceptions of the preschool experience. Preschool exit attainments were also examined in relation to followup achievement and attitude measures. A total of 64 subjects

participated: 27 had experienced at least 1 year of preschool education based on an early version of the DISTAR program, 17 had attended a conventional Head Start program for 1 year prior to kindergarten entry, and 20 had no formal preschool history. A group of 33 students whose preschool history could not be easily determined was added to the main sample for a broader analysis of the relationship between school achievement and school sentiment. Subjects completed the Quality of School Life Scale and a specially designed self-report checklist for memory and sentiment about preschool. Additional measures of intelligence and of academic skills and achievement were drawn from school records. Results revealed no main long term effects for different preschool programs; followup measures did not distinguish between the total preschool sample and controls. Moderately positive correlations were revealed between several preschool exit criterion measures and later school achievement, but not attitude. Favorable student evaluations of preschool were observed, as was a general consensus about the reasons for going to preschool. (Author/RH)

Descriptors—*Anxiety, Clinical Diagnosis, *Coping, *Mothers, Observation, *Parent Child Relationship, Parent Influence, *Physical Examinations

Identifiers—University of Florida

To determine how parent behaviors affect children's anxiety and coping responses, and to assess how children's behaviors affect parental functioning in stressful medical settings, 50 children between 4 and 10 years of age, who were seen as outpatients in the Pediatric Clinics at Shands Teaching Hospital at the University of Florida, were videotaped along with their mothers while waiting for the physician in clinic examining rooms. An observational scale of parent/child interaction was used to rate the 5- to 10-minute videotapes. Four classes of child behaviors were observed: attachment, distress, exploring, and social affiliation. Parenting behavior categories observed were informing, restraining, distracting, reassuring, ignoring, and agitation. Results supported the prediction that children in pediatric settings are affected adversely by maternal anxiety. Mothers rated as agitated during the waiting period ignored their children more, and their children showed more distress and engaged in less information seeking. In addition, it was found that mothers who were not highly agitated were more likely to interact with their children and to use distraction to keep them from becoming distressed. Results were interpreted as furthering scientific understanding of the development of fears and coping competencies in children. (BD)

A Piagetian Approach to Psychopathology: Scheme Differences in Children's Play.

Pub Date—Aug 83

Note—28p; Paper presented at the Annual Meeting of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—*Children, *Classification, Clinical Diagnosis, *Cognitive Ability, Cognitive Development, Comparative Analysis, Criteria, *Emotional Disturbances, Institutionalized Persons, *Play, Pretend Play, *Psychopathology

Identifiers—Normal Children, Piagetian Theory

An exploratory study of structured and unstructured play was conducted with a small number of severely disturbed and normal children 9 to 13 years of age. Specifically, the investigators characterized psychopathology from a cognitive-developmental perspective by focusing on the Piagetian "scheme" and its manifestation in the play and classification tasks of public school students and those in a day treatment institution. The study resulted in a pre-

liminary list of criteria differentiating disturbed and normal subgroups. Case studies illustrated differences between the two populations in scheme intercoordination, repetition, modifiability, assimilation and accommodation, and symbolic nature. (Explanations of scheme deviations are presented through examination of problems in subject/object interactions, and clinical applications of Piagetian theory are discussed.) (RH)

Sex-Role Concepts and Gender Identity in Children's Drawings.

Pub Date—Apr 83

Note—12p; Paper presented at the Annual Meeting of the Eastern Psychological Association (54th, Philadelphia, PA, April 6-9, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—Elementary Education, *Elementary School Students, *Freehand Drawing, Grade 6, Performance Factors, Sex Differences, *Sex Role, *Sex Stereotypes

Identifiers—*Femininity, *Gender Identity, Masculinity, *Stimulus Characteristics

The expression of children's concepts of sex-roles was explored by examining changes in the masculinity and femininity of human figure drawings of males and females. A total of 106 sixth-grade students participated in two Draw-a-Person sessions. In the drawing task, persons to be drawn were either specified in terms of gender or unspecified as to gender but described as being either masculine or feminine. Thus, six descriptions were used: male/masculine, male/feminine, female/feminine, female/masculine, feminine sex-role/no gender specified, and masculine sex-role/no gender specified. It was hypothesized that (1) boys would respond to incongruity between traditional sex-role and gender with exaggeration of masculinity or femininity in their drawings; (2) girls would be more likely to assimilate the mixed configuration; and (3) when the sex of the stimulus person was not specified, subjects would assume congruity between sex-role and gender. Results of mixed factorial analysis of variance and a chi-square test show that, regardless of described sex-role of stimulus persons, gender of child and specified gender of stimulus persons had the most significant effect on the masculinity/femininity of the children's drawings. In the absence of gender specification, sex-role determined gender of figure drawn. Girls drew figures of both genders; boys drew male figures. (Author/RH)

High-Risk Infants: Auditory Processing Deficits in Later Childhood.

Pub Date—Aug 83

Note—12p; Paper presented at the Annual Meeting of the American Psychological Association (91st, Anaheim, CA, August 26-30, 1983).

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—*Auditory Perception, Comparative Analysis, Diseases, Followup Studies, *High Risk Persons, *Premature Infants, *Receptive Language, *Young Children

Identifiers—*Asphyxia, *Chronic Lung Disease

To determine whether deficits warranting intervention are present in the later functioning of high-risk infants, 22 premature infants who experienced asphyxia or chronic lung disease (CLD) but who had no gross developmental abnormalities were evaluated. Assessments of auditory perception and receptive language ability were made during later childhood (ages 4 to 8 years). A total of 21 age-matched children born at term with no complications composed the comparison group. High-risk subjects were found to be significantly inferior to the comparison subjects in discriminating auditory tones, perceiving rapid auditory sequences, and exhibiting receptive language skills. CLD subjects were found to be significantly inferior to asphyxia subjects only in receptive language skills. It was concluded that these deficits in later childhood indicate the need to monitor high-risk infant development despite the absence of gross delays. (Author/RH)

An Initial Classification of Noncognitive Student Behavior Grading Items.

Pub Date—Aug 83

Note—43p; Funded by a grant from the Graduate Studies Fund of the New York Province of the Society of Jesus.

Pub Type—Reports—Research (143)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—*Classification, Elementary School Teachers, Elementary Secondary Education, *Grading, Graduate Students, *Report Cards, Secondary School Teachers, *Student Behavior

Identifiers—*Noncognitive Classroom Behaviors

Report-card marking items by which elementary school students' noncognitive classroom behaviors are graded were studied to establish a preliminary classification of behavioral assessment domains.

Two studies were conducted. The first study employed a cluster-analytic approach to a pool of 136 noncognitive behavior-marking items that had been sorted and grouped into homogeneous sets by 16 psychologists and educators. In the second study, a total of 39 elementary school teachers rated a 32-item subset of the larger marking item pool on three scales. Specifically assessed were the degree to which items reflected (1) classroom or task-oriented adaptiveness, (2) interpersonal relationships and skills, and (3) personal adjustment and psychological self-concept. Cluster-analytic and analysis of variance results suggested a general dichotomy in the classification of items: quality of task orientation versus quality of interpersonal relational skills. Disagreement was found between the participants of the two studies in their classification of items dealing with students' self-regulatory behavior and acceptance or practice of normative patterns of socialized conduct. (Areas for further empirical study are discussed.) (Author/RH)

Descriptors—*Adopted Children, *Adoption, Blacks, *Family Attitudes, Family Characteristics, *High Risk Persons, Interviews, Questionnaires, *Social Support Groups, Whites

Identifiers—*Adoption Bonding Program, *Adoptive Parents

An exploratory study was made to investigate factors possibly related to adoptive families' and adoptive single parents' decisions about participation in a new postplacement support service. Factors under consideration included family background, existing informal supports, attitudes toward mental health professionals, and perceptions of the specific postplacement service. The service under investigation was an adoption bonding program, a variant of family therapy designed to help the family adopting an older child readjust as a new system and build new relationships. Each adopting family was administered an interview schedule and questionnaires were developed specifically for the study. Each question investigated one of three dimensions: (1) availability and use of supports, (2) perceptions about childrearing and mental health, and (3) perceptions about the bonding program. Several factors were found to be related to participation in the service program, including ethnicity, marital status, availability of supports, and impressions of the program assessed. It was concluded that findings suggest the importance of considering such factors in the design and implementation of postadoptive placement supports. (RH)

150 Document Resumes

Descriptors—*Early Childhood Education, *Educational History, *Educational Needs, *Educational Practices

Recommendations are made in this discussion concerning priorities for action by early childhood educators, and the history of early childhood education is selectively reviewed to identify patterns supporting these recommendations. It is argued that the experiences of educational pioneers reveal the need to work for program funding from a variety of sources and the need to assure that professional organizations provide support for family-operated child care centers. Similarities and differences between the kindergartens of the early 1900s and Head Start in the 1970s are pointed out. The need for vast changes in the urban job picture to encourage substantive social change and the growing professionalization of early childhood education are also briefly discussed. Concluding remarks focus on ways pioneers of early childhood education overcame their many difficulties—ways, it is asserted, that might well be emulated today. (RH)

Parents, Children, and "Favorite" Books: An Interview Study.
Pub Date—[83]
Note—16p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Books, *Childhood Attitudes, *Children's Literature, Interviews, *Parent Attitudes, *Preschool Children, Preschool Education, *Story Reading

A total of 15 parents participated in interviews about storybooks selected as favorites by their preschool children. Interviews were set up with the parent who said he or she read most often to the child and focused on one of two books the parent stated was either a greater or more enduring favorite. The parents' responses were content-analyzed and reanalyzed; disagreements, all minor among analysts, were resolved by discussion. Responses fell into eight categories: emergent reading behaviors, "deep meanings," intense affinity, interaction, illustrations, participatory qualities of the books, external factors, and the pool of available books. Discussion cutting across those categories focused on children's behaviors, the books as favorites, parents' behaviors, and the books that were available. Findings indicated that all of the children favored particular books and behaved in ways thought to apply to "precocious" readers or exceptional readers only. Parents' answers suggested the importance of parent/child interaction with books and indicated a range of motivations related to this way of spending time with their children. Many children spent considerable time with parents and books, and owned a wide range of books. Favored books were not children's classics but were mostly inexpensive, softbound, easily available books of the sort often found in drugstores or supermarkets. (RH)

Descriptors—Adjustment (to Environment), *Attachment Behavior, Comparative Analysis, Developmental Continuity, Developmental Stages, *Developmental Tasks, *High Risk Persons, *Infants, Longitudinal Studies, *Mothers, *Preschool Children, Preschool Education

Identifiers—*Toddlers
Part of a prospective longitudinal study examining factors that account for developmental outcomes for high-risk children, this investigation focused on how successful adaptation at 12 and 18 months is related to adaptation at 24 months, 42 months, and 4.5 to 5 years of age. Assessments at each age were designed to indicate how the child was resolving salient developmental issues. To determine adaptation at 12 and 18 months, the quality of mother/child attachment was assessed. At 24 months, the children were videotaped with their mothers while performing tool-using/problem-solving tasks of in-

creasing difficulty. At 42 months, children were observed with their mothers in four learning tasks requiring mothers to use teaching strategies. Finally, preschool children were rated on several dimensions, including agency, ego control, dependency on teachers for support and nurturance, social skills in the peer group, positive affect, negative emotional tone, and compliance with teachers' directions and suggestions. In addition, teachers were asked to complete the Preschool Behavior Questionnaire and a problem behavior scale. Children securely attached at 12 and 18 months were judged to deal more effectively with important developmental issues at later stages than were anxious-resistant and anxious-avoidant children. Results were also interpreted to provide some evidence for continuity of adaptation in high-risk children. (RH)

Descriptors—*Educational Change, Educational Quality, Education Courses, Elementary Secondary Education, Higher Education, *Internship Programs, Student Teaching, *Teacher Certification, *Teacher Education, *Teacher Qualifications, Teacher Selection

Two major problems of state certification of teachers are decline in the quality of teacher candidates and the inability of qualified applicants to be certified without majoring in education. With improved knowledge about how good teachers teach and what is essential for beginning teachers to know, teacher education programs are likely to remain the primary route to a teaching career. However, it is reasonable to explore alternative routes to teacher certification. Prospective teachers without education degrees could be certified after successfully completing subject matter tests, a year-long district-based internship, and evening and/or summer school education coursework. Districts might choose to hire only graduates of teacher education programs or might consider implementing the alternative scheme. Providing an alternative way of certifying teachers will help attain the goal of placing the best teachers before students. (RH)

Descriptors—*Educational Improvement, Elementary Secondary Education, *Parent Participation, *Parent School Relationship, School Community Relationship, Student Improvement

The lack of an operational linkage between the educational forces of school, home, and community is a major part of the crisis in the schools today. To reach the widest number of children in the earlier school years, it is vital for schools to connect with the home. An ideal time to begin a coordinated, concerted national effort linking the resources of the home and school is now. Even though the family has changed, parents continue to want to help their children. To help parents do so, schools must find ways to provide information and materials, increase parents' awareness of their importance as "educators," and offer a variety of programs for families to use with children at home. The following recommendations can serve as criteria for developing school programs: (1) link the involvement of parents directly to the achievement of their children; (2) provide opportunities for families to supplement and reinforce children's academic skills at home; (3) initiate local, state, and/or national efforts to expand educational partnership; and (4) provide involvement opportunities at all levels of schooling for as many persons as possible. To assure acceptance and continuation of linking programs, parent/community involvement must be viewed as a legitimate activity of schools and as an integral part of its delivery of services. (BJD)

Descriptors—*Court Litigation, *Educational Equity (Finance), *Educational Improvement, Educational Responsibility, Elementary Secondary Education, *Equal Education, *State Courts

Identifiers—*Excellence, Georgia

Recent litigation in Georgia's courts has concerned the constitutionality of the state's system of funding for education and the issue of equal educational opportunities. The state supreme court has decided that, while the system is a poor one in terms of equalization, it bears a rational relationship to legitimate state purposes and thus does not violate state equal protection requirements. The court also held that plaintiffs had shown serious disparities in educational opportunities in Georgia and that, since current legislation will not eliminate them, solutions must come from lawmakers. These opinions parallel the recommendation in the publication "A Nation at Risk" stating that educators and elected officials should be held responsible for providing the leadership and financial support to achieve reform. Consideration of these and related issues has suggested that (1) the problem of equity involves different types of equity; (2) the best effort and performance must be expected from all students; (3) educational opportunities should extend far beyond traditional institutions of learning; and (4) equity in education requires commitment to achieving excellence at levels ranging from that of the individual learner to that of the nation. Progress of Atlanta schools in addressing needs of minority students stands as an example to the state and the nation of equitable treatment of a diverse population. (RH)

Identifiers—California

College admissions requirements can be a powerful force toward improved student achievement in high schools and colleges. In January of 1982, California State University adopted more rigorous admission requirements, to become effective in the fall of 1984. Since that decision, morale of high school teachers has improved, and expectations and course criteria have influenced course content. College professors have worked closely with their high school counterparts to devise curricula, understand each other's problems, and participate in summer institutes. In addition to secondary/postsecondary collaboration, the involvement of the private sector has produced funds. Prior to the admissions change, a series of exploratory discussions with high school and junior high school teachers, counselors, administrators, and school board members was conducted. Thus, university faculties and high school staff participated in shaping the specifics of the new requirements, and the response by those in secondary education has been positive. Finally, it can be assumed that higher admission standards will not necessarily jeopardize college enrollments; rather, the expectation is that few students will be blocked by more requirements, and more will persist due to better preparation. Descriptors—Age Differences, Cues, *Preschool Children, Preschool Education, *Recall (Psychology), *Spatial Ability

Identifiers—*Context Effect, *Spatial Context

Two studies were conducted to determine whether preschool children automatically use spatial context to aid recall of objects or whether the ability to use spatial context as a retrieval aid is a deliberate mnemonic strategy that develops later. In the first experiment, a total of 32 children (16 aged 3 and 16 aged 4) participated in a memory task under three conditions varying in type of recall (free or cued) and in the presence or absence of spatial context. Spatial context was found to facilitate older children's recall of items. In the second experiment, the sample size was increased to 48. Children participated in a training procedure in which they labelled 13 large toy props that had stable spatial locations in a small playroom. After the subjects' play with the objects was recorded, the children were brought out of the room, and the objects were removed. Subjects were brought back to the room and were asked to recall the missing items under one of two conditions (with spatial context either present or absent). After the recall task, children were encouraged to find the missing items and to help return them to their original locations. Results indicated that the mean number of objects recalled was greater for both older and younger preschoolers when they recalled within the spatial context than when they did not. (RH)

Identifiers—Florida (Orange County), *Law Related Education

A practicum project was designed and implemented to improve and increase kindergarten through third-grade students' awareness of responsible citizenship. To attain this goal, efforts were made to (1) insure that teachers became knowledgeable about teaching strategies that impart an awareness of law-related concepts; (2) increase students' awareness of the law and citizen responsibilities through increased community involvement; (3) expose students to careers within law agencies; and (4) develop a medium through which pupils in kindergarten through sixth grade can show the community and other classes their growth in citizenship skills. Results of student pretests and posttests, teacher questionnaires, records of visiting community resource personnel, implementation of career units, and three published editions of a student newspaper provided evidence that the goals of the practicum had been attained. For implementation prior to and during the first few weeks of field practice, a preservice orientation program was developed to provide student teachers with appropriate philosophical and practical information as well as affective/social support. Students were affiliated with a community college laboratory school and varied widely in ability. Goals of the practicum included facilitating smoother transitions in the laboratory school from semester to semester, lessening anxiety, increasing confidence, and increasing retention in the student teacher program. Planning methods included a survey of prior student teachers in the laboratory school and a survey of other California community colleges with early childhood education programs. The completed orientation program included a slide show presentation, provision of a folder of written materials, a tour, an introductory staff meeting, and 6 weeks of extended educational content and supportive social interaction. Students experiencing the orientation program found it useful and helpful and felt "better prepared" for field practice, but their reported anxiety levels were still high. In general, however, student retention and attendance were improved following the orientation program. (Author/RH)

The Development of a Support Group and Network

for the Parents of Special Needs Children.

Nova Univ., Fort Lauderdale. Center for the Advancement of Education.

Pub Date—Mar 83

Note—81p; Ed.D. Practicum, Nova University.

Pub Type—Dissertations/Theses—Practicum Papers (043)

EDRS Price—MF01/PC04 Plus Postage.

Descriptors—*Disabilities, Elementary School Students, *Parent Education, *Parent School Relationship, Practicums, Public Schools, Questionnaires, *Social Support Groups, *Special Education, *Workshops

The practicum described in this report addressed the expressed need and desire of parents of special needs children in Marblehead Massachusetts to participate in a support group to help solve mutual problems and discuss shared frustrations. A series of four workshops for parents was developed. Goals of the practicum were (1) to have parents take over the management and direction of the group; (2) to improve communications between the school system and the parents by having school staff present information at scheduled workshops; and (3) to have parents reach out to one another and establish their own network of individual support. Of the parents who attended the workshops, more than 75 percent indicated that these goals were met, decided to continue the group, and stated that the meetings were very successful. (Author/RH)

Descriptors—Child Development, *Children, Family Environment, *Fathers, *Infants, Neonates, *Parent Child Relationship, *Parent Role, Parent School Relationship, Play

Identifiers—House of Representatives

Research on the relationship between fathers and their children was provided to the Select Committee on Children, Youth and Families. Six areas were highlighted in terms of what has been learned about the father/child relationship, what information is still needed, and policy implications. Principal assertions included the following points: (1) fathers are increasing their involvement in family life in all subcultures and social classes, and this trend is likely to continue; (2) fathers can and do form significant meaningful relationships with their infants right from birth; (3) fathers are more likely to be their infant's play partner and have a qualitatively distinct style of play that is more stimulating and arousing than play among mothers and infants; (4) father's actual ongoing involvement with his child is influenced by forces within the family (mother's wishes, marital quality) and by forces outside the family (illness, job loss); (5) involvement of fathers during perinatal period is at a high level, currently approaching 100 across social classes and subcultures; (6) father participation in school programs and involvement with older children seems to diminish rapidly after infancy. The Black Child: Some Sociocultural Considerations.

Pub Date—[79]

Note—22p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Black Culture, *Black Dialects, *Black Education, Cultural Differences, *Educational Needs, Elementary Secondary Education, Family Environment, Questionnaires, Racial Bias, Racial Differences, Self Concept, Socialization, *Sociocultural Patterns

This study presents a framework for instructional programs based on four assumptions about the sociocultural background of black children: (1) black children share a common cultural heritage, a history of oppression and racial injustice in America; (2) black children grow and develop in a family environment that is historically different in customs and organization from that of the dominant culture; (3) black communities are instrumental in supporting attitudes, beliefs, and values of black people, thus enhancing self-concepts of black children; and (4) black children have unique abilities and strengths that help them to deal effectively with their environment. A questionnaire about these assumptions and about planning programs based on them was sent to 55 black scholars of whom 35 (63 per cent of the sample) responded. There was generally high agreement among the scholars, specifically concerning the importance of cultural heritage, family, and community, and the development of unique black strengths. Items generating low agreement concerned the importance of monthly workshops, familial styles and structures, employment of teachers from the community, and acceptance of black children's language in school. Staff members of eight black participant programs were also interviewed; their responses revealed that most programs made no effort to consider black sociocultural background as a necessary part of educational needs. Findings suggest that educators must become sensitive to cultural differences among children and develop programs responsive to the needs of all. (BJD)

Zimmerman, Judith D. And Others
Distribution of Childrearing Demands.

Pub Date—Nov 82

Note—7p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Bias, *Child Rearing, Demography, Economics, *Family Characteristics, Longitudinal Studies, *Parent Responsibility, Research Methodology

The tools of economic analysis were applied to demographic data in order to develop a social indicator measuring the extent of inequality in the distribution of childrearing responsibility in households from 1940 to 1980. With data drawn from the Current Population Survey of the Bureau of the Census, a "demand intensity" measure was developed. This measure depicts the combination of children and adults in households and arranges households by the relative weight of demands placed on household resources by the number of children present. The Lorenz curve and Gini coefficient methodology were used to analyze the data. Major findings indicated that the distribution of childrearing demands was somewhat more equal during the period from 1940 to 1960 than during the subsequent two decades. However, it was found that, after a shift toward greater equality between 1950 and 1960, the degree of inequality in childrearing responsibilities has increased since 1960. (Implications of the findings for public policy are briefly discussed.) (RH)

Identifiers—*Individual Service Plans, Project Head Start, *Screening Procedures

Containing content and materials for 14 workshops, this training guide has been developed to assist Head Start programs in developing and implementing individual service plans (ISPs) for high-risk preschool children. Differing from the public schools' individual education programs, the ISP addresses all educational needs of the child as well as needs in other component areas, such as health, nutrition, parent involvement, and social services. The first four workshop topics cover screening, diagnosis, educational assessment, and component assessment procedures. Development of the ISP is subsequently covered in workshop material concerned with (1) writing a rationale for the ISP; (2) conducting ISP conferences and related home visits; (3) writing statements of the child's current level of functioning; (4) establishing long term goals for each area of development; (5) writing short term objectives and instructional objectives in behavioral terms; and (6) completing ISP sections having to do with special services, materials, person(s) responsible, evaluation criteria, and time lines. ISP implementation is covered in workshop material focusing on analyzing tasks, writing activity charts, and planning the classroom environment and schedule. The final workshop focuses on "transitioning" (i.e., helping handicapped children make the transition into the public school system). Six appendices provide references, excerpts from related books, guides to screening and assessment activities, and directions for developing ISP packets and videotapes. An ISP for use in training activities is included in the last appendix. Forms useful for developing ISPs are provided throughout the training guide. (RH)

Descriptors—Educational Finance, *Educational Improvement, Educational Objectives, Educational Planning, Elementary Secondary Education, *Inservice Teacher Education, *Instructional Improvement, *Management Development, Principals, Resource Staff, Teachers, Team Training

In response to the national impetus for improvement in education, New Jersey officials have proposed the creation of the Academy for the Advancement of Teaching and Management, an organization designed to raise the standards of professional skills for teachers and principals. The organization will train teachers and administrators for 2 years in specific structured teaching and instructional management practices. Participation will be voluntary, with elected schools sending a team of three to five teachers and the building principal. Various training programs, based upon different instructional strategies and approaches, will be offered. Trained teams will subsequently demonstrate and train others. This program, planned for joint funding, will be staffed by a director/trainer, several permanent staff trainers, a 1-year resident visiting expert, outside consultants, and one local teacher/instructional practitioner. In order to foster effective schooling, goals and objectives include activities intended to promote change in school environmental and social conditions. (BJD)

Local District Planning Model Guidebook.

New Jersey State Dept. of Education, Trenton.

Pub Date—1 Mar 83

Note—46p.

Pub Type—Guides - Non-Classroom (055)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—*Educational Planning, Elementary Secondary Education, Guidelines, Models,

*School Administration, *School Districts

Identifiers—*New Jersey

The purpose of this guidebook is to assist chief school administrators of New Jersey's schools in the development of educational objectives and plans of action. Section 1 discusses district submission procedures, including description of the procedure to be followed, basic requirements, and review and approval processes. Section 2 presents a model of a basic planning process that features a sequence of questions meant to assist district administrators as they progress from identifying needs to developing plans of action. Elements of the model are identifying priorities, defining priority needs, developing a plan of action, and analyzing accomplishments. Section 3 consists of 16 questions and answers focusing on requirements and provisions related to plans of action, the planning process, and the recording format. Section 4 offers a glossary of terms, and an appendix provides five sample action plans. (RH)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Classroom Observation Techniques, *Interpersonal Competence, *Preschool Children, Preschool Education, *Problem Solving, *Social Behavior, *Social Cognition

Identifiers—Project Head Start, *Social Interaction

Examined were preschoolers' naturally occurring behaviors during their attempts to gain, maintain, and regain materials, space, and peers' attention/interaction in the classroom. The major question addressed was, Are there differences between "most" and "least" competent preschoolers in terms of (1) frequency and type of problem involvement, and (2) the number and type of strategies used to resolve problems? Subjects were 28 children attending one of four Head Start classrooms in two geographical locations. Teachers rated children's social behavior on two instruments: Kohn's Social Competence Scale (KCS) and the Hahnemann Preschool Behavior Rating Scale (HPBS). (The KCS measures interest/participation and cooperation/compliance, while the HPBS measures emotionality, impatience, and aggression.) The 14 least competent children were those who ranked lowest on cooperation/compliance and highest on all three factors of the HPBS. The 14 most competent children were those who ranked highest on both factors of the KCS and average on aggression and impatience. Using a focal child/time-sampling procedure, children were observed for fifty 1-minute intervals. A total of 16 strategies for solving problems and 4 general categories of behavior not related to problems were observed; additionally, a written record was made of several dimensions of observed behaviors. Results indicated differences in strategies most and least competent preschoolers used to solve interpersonal problems. (RH)

 Identifiers—PF Project

The curricular and extracurricular responsibilities of teaching in a small school district require uniquely prepared teachers. Rural teachers often need additional background in instructional methods for teaching reading, content areas other than their specialty, discipline techniques, use of community resources, and individualized diagnosis and prescription. A very important issue is the delivery of college-level educational programs to teachers in isolated areas. Eastern Oregon State College has risen to the challenge of delivering services in a variety of ways. To improve instruction in reading/study skills, rural teachers and administrators should: develop a resource network; be aware of professional organizations; take advantage of small classes; be aware of their role in the reading/language arts scope and sequence; consider peer tutoring or cross-grade activities; obtain a wider skill range of materials; discuss the district's reading/language arts program; create inservice time; seek workshops as a group; target reading/study skills as an inservice focus; develop a parent-volunteer program; create communication between itinerant specialists and teachers; subscribe to professional journals; use regional college libraries; adapt instruction for gifted students; explore research in learning and teaching styles; share successful activities; look at the value of microcomputers; read current literature on reading instruction; and get additional training in reading. Descriptors—Alaska Natives, American Indian Culture, *American Indian Literature, *American Indians, Art Activities, Cultural Differences, Dramatics, *Drug Abuse, Elementary Secondary Education, Legends, Mythology, *Prevention, Story Reading, *Story Telling, *Youth

Intended for people working in drug abuse prevention or trying to help American Indian youth feel pride in themselves and their culture, the booklet provides specific guidelines on how to use tribal stories in preventing drug abuse. Following a brief introduction to drug abuse problems and prevention strategies, the booklet explains three kinds of American Indian stories: the "How It Came to Be" stories, which explain almost everything; the Hero stories, which tell how young people overcome great obstacles to achieve their goals; and the Trickster stories, which are humorous reminders not to take life too seriously. According to the guide, the stories are good drug prevention tools because they touch the heart, spirit, and mind; give examples of how to deal with problems; help develop self-awareness and self-esteem; and can be the basis of many activities. The booklet includes specific guidelines for telling, dramatizing, collecting, and illustrating the stories. It includes four sample stories to use in drug abuse prevention: the Cherokee story "How the Raccoon Got Rings on His Tail," the Nez Perce story "Coyote Breaks the Fish Dam at Celilo," the Blackfoot story "Scarface," and the Micmac story "The Invisible Hunter." Identifiers—*Iowa Tests of Basic Skills, *Pleasant Hill School IA

During the 1979-1980 school year, 23 Old Order Amish pupils in the Pleasant Hill School near Bloomfield, Iowa, took the Iowa Test of Basic Skills. On the language arts subtest, five of six third grade students ranked above 50% in capitalization, four ranked above 50% in spelling and punctuation, and three ranked above 50% in usage. Four third grade

students ranked above 50% overall. Among seven fourth graders, five ranked above 50% in spelling, four ranked above 50% in punctuation and usage, and two ranked above 50% in capitalization. Overall, four ranked above 50%. Among five sixth graders, four ranked above 50% in spelling, punctuation, and usage, and three ranked above 50% in capitalization. Overall, four ranked over 50%. Among three seventh graders, two ranked over 50% in spelling and usage and one in capitalization and punctuation. Only one seventh grader ranked over 50% overall. Both eighth graders ranked over 90% on all measures except capitalization, in which one student's score fell to 62%. Both ranked over 90% overall. Despite variation among themselves and among grades, students were strongest in spelling and weakest in capitalization. Fifteen ranked over 50% on the total language arts subtests. (SB)

Horwood, Bert
 The Anatomy of a Learning Experience.

Pub Date—Sep 82
 Note—12p.; Paper presented at the Annual Association for Experiential Education Conference (Arcata, CA, September 1982).

Pub Type—Speeches/Meeting Papers (150)
 EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Course Content, Course Evaluation, Course Objectives, Educational Assessment, *Experiential Learning, Group Experience, Higher Education, *Interdisciplinary Approach, Learning Activities, *Learning Experience, Learning Processes, Literature Reviews, *Models, Outdoor Activities, Relevance (Education), Risk, *Student Educational Objectives

Analysis of recent literature on experiential education provides material for a model for learning experiences in experiential education. The model is constructed from six interconnected and overlapping parts, ranging from the profoundly foundational to the more specifically tactical. First, the learning experience attends to the human condition. Second, the learning experience transcends the boundaries of academic or other disciplines. Third, learning experiences are rich in group interaction while simultaneously promoting autonomy and independence of individuals. Fourth, the learning experience is risk-laden. Fifth, the experience involves a 3-part learning sequence: readiness, action/performance, and reflection. The final characteristic of a learning experience is the high degree of concreteness or reality of the action phase. A university English course called "Self-Reliance in a Technological Society" provides a check on the model. In the course, students read and discussed a variety of literature on self-reliance, while simultaneously buying, renovating, and selling a small house; all six critical ingredients of the model were present in the

course. (MH)

Grolier Incorporated sponsored a national random-sample survey of 645 parents, aged 18 and over, to discover attitudes about education. The survey paid considerable attention to aspirations of America's nonwhite citizens. Results indicated that parents sought involvement in local schools, cherished the impact of education for life enrichment at every level, valued basic skills highly, placed particular importance on children's education if they themselves were isolated through educational disadvantage or social discrimination, and, on some issues, demonstrated marked geographical differences in belief patterns. A majority (75%) agreed that a major purpose of education was to achieve financial success; 96% believed that education's primary purpose was to enrich the quality of a person's life. Parents were committed to a specific priority of subjects in grades one through eight: English first, then math, with science, social studies, and computer science tied for third. Education was viewed as a path to a better future by those in difficult circumstances. Faith in the promise of opportunities opened by education remained strong among nonwhites. Few parents wanted to tamper with current school year length. A majority (60%) believed teachers' salaries should be improved. Graphs and tables present percentages of answers to specific questions. Survey methodology is described. (MH)

The Migrant Interstate Project was designed to promote the cooperation and coordination of any Texas schools that provide services to secondary migrant students. The project placed primary emphasis on credit accrual and exchange activities and planned other project components focusing on counseling, guidance, and parental involvement. For 1981-1982, the project staff proposed 12 implementation objectives with accompanying activities: (1) continued familiarization with migrant education; (2) 20 presentations to parent advisory committees about the secondary credit exchange program; (3) presentations at service centers about the secondary credit exchange program; (4) 10 presentations to rural school districts about secondary alternative programs for migrant students; (5) updating of the operational guide on secondary credit exchange; (6) utilization of articles, television, and radio for public and professional awareness of the secondary alternative programs for migrant students; (7) continued professional growth through conferences and inservice training; (8) provision of workshops and staff development for counselors; (9) production of audio-visual aids for counselors; (10) coordination of parental involvement activities such as workshops, presentations, guides, and films; (11) dissemination of information to assist national and state secondary schools in coordinating intra- and

interstate credit exchange; and (12) consultation to professional associations, organizations, and parent advisory councils. The Spanish translation constitutes the second half of the document. (SB)

Difficulties in recruiting and retaining rural special educators relate directly to deficiencies in teacher preparation programs, which are not providing their budding professionals with appropriate instruction to insure success and survival as rural special educators. In December 1982, a National Consortium of Universities Preparing Rural Special Educators was formed to participate in the development of curriculum designed specifically for rural preservice programs. Also, 37 universities and colleges across the country agreed to field test 10 preservice curriculum modules developed by the National Rural Project and to modify them to suit their needs, with the modifications recorded via cassette tape logs. The modules are based on competencies designed for infusion into ongoing special education programs, and include personal development skills and effective survival strategies, alternative instructional arrangements and delivery systems for low-incidence handicapped students, involving citizens and agencies of rural communities in cooperative programming for handicapped students, working with parents of handicapped students, working with peer professionals in rural environments, creative resource identification, and a rural preservice simulation. Personnel specifically trained to work with rural handicapped populations will have greater personal as well as professional success. Ninety-two curriculum elements to be included in preservice modules are listed. (MH)

While most rural special education leaders agree on the universality of certain problems (funding inadequacies, personnel recruitment/retention, transportation, low-incidence handicapped populations, staff development needs, resistance to change) in rural areas, no agreement exists regarding generalizable solutions which will work in all rural areas. Relationships between leadership skills, resources, and community and school system infrastructures must be taken into account when solving such problems. Marrs' Law of Non-Absolutes is contained in two axioms which must be considered: (1) Everything in life is on a continuum, and (2) There is no such thing as a pure model. The leadership skills dimension includes 10 components, each possessed to some degree by most special educators: interper-

sonal skills, negotiation skills, creativeness, logical abilities, self confidence, assertiveness, proactive planning, organization development, communication, and self-renewing abilities. Consideration of community and school system infrastructures requires understanding of formal and informal organizational structures, communication networks, raison d'être, service/social/professional organizations, and movers and shakers. The resources dimension includes not only four traditional resources (budgets, personnel, time, space), but also requires attention to external funding, collaboration, community involvement, flexibility, recruitment/retention strategies, and technology. Successful rural special educators integrate these factors to serve the best interest of the handicapped. (MH)

Although rural children with mild or moderate handicaps have been integrated into the regular classroom, children with severe or low-incidence handicaps continue to be underserved by rural schools. Traditional service delivery models are inadequate in rural areas where many levels of the traditional service continuum and adequate staff and funding do not exist. Because of the diversity of rural communities, no one service delivery model can satisfy all situations. Instead, planners must design service delivery models specifically for the system and subculture in which they will be implemented. When designing service delivery systems for rural handicapped students, planners must consider 15 community and district factors, their interrelationships, and their combinations. The factors include population, climate, geography, economic lifestyle, student ages, disabilities, cost efficiency, personnel attitudes, resources, distance to services, language spoken, cultural diversity, district-resource relationship, local communication and power structures, and district special education history. Planners must also consider 10 district variables including equipment, facilities, finances, staff development system, transportation, staffing, parent involvement and training, community involvement, governance system, and interagency collaboration. The article summarizes 10 successful service delivery models for serving rural children with low-incidence handicaps. (SB)

Should a Special Educator Entertain Volunteers: Interdependence in Rural America.

Murray State Univ., KY. Dept. of Special Education.

Pub Date—Aug 83

Note—24p.

Available from—National Rural Project (NRP), Murray State University, Doran House, 1603 Hamilton Ave., Murray, KY 42071 (\$6.00).

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.**Descriptors**—Community Involvement, Community Resources, Community Role, Community Support, *Delivery Systems, *Disabilities, *Human Resources, Human Services, Linking Agents, Needs Assessment, Networks, Normalization (Handicapped), Rural Population, *Rural Schools, School Community Relationship, Special Education Teachers, Voluntary Agencies, *Volunteers, Volunteer Training**Identifiers**—Interdependence, *National Rural Independent Living Network

The National Rural Independent Living Network, funded to Murray State University (Kentucky) by the National Institute of Handicapped Research, is

developing Community Independent Living Service Delivery Systems (CILSDS) for rural people with disabilities which will be housed in over 500 communities by early 1986. The CILSDS, staffed by citizen volunteers and professionals, are currently located in 20 communities and are linked by a network of individual volunteers, existing service and social clubs, libraries, churches, country stores, volunteer fire departments, and numerous other agencies and organizations that wish to help their disabled neighbors lead relatively independent lives. Project staff spend time in each community identifying residents who have disabilities and determining their independent living needs, as well as assessing community volunteer resources. Creating CILSDS is a natural extension of dynamic and community-responsive public school special education programs. Involving trained volunteers in the provision of services to people who have disabilities can reflect positively on schools and human service agencies. The CILSDS can become focal points for total community interdependence across a wide band of services. A diagram showing lay citizenry resource networks and professional resource networks, linked through the central core of the public school, is provided. (MH)

Identifiers—Public Law 94 142

The rural special education context is unique because of the distinct environment and the variety of rural school subcultures. However, little information about rural special education is available prior to the late 1970's, partially because federal agencies lacked a working definition of "rural." Although rural and urban special education service environments vary greatly (especially in personnel turnover, transportation, community structure, geography, students served, communication, teacher qualifications, and resource availability), urban service delivery models historically have been recommended and unsuccessfully applied to rural schools. A study of special education services in 75 rural districts and cooperatives in 17 states shows significant improvements in the programs and services offered and in the types, ages, and numbers of students served after implementation of PL94-142. However, major service delivery problems remain in the areas of funding, staffing, teacher certification, and preservice education. In addition to reducing resistance to change, special education collaboratives can help solve rural service delivery problems by offering cost savings through shared staff, programs, and resources. However, collaboratives must be carefully operated; successful strategies will involve decentralized services, staff roles that emphasize networking, and clearly established goals and responsibilities. The report concludes with 13 recommendations for rural special education policy. (SB)

Technologies as Rural Special Education Problem Solvers—A Status Report and Successful Strategies.

Murray State Univ., KY. Dept. of Special Education.

Pub Date—Aug 83

Note—23p.

Available from—National Rural Project (NRP), Murray State University, Doran House, 1603 Hamilton Ave., Murray, KY 42071 (\$6.00).

Pub Type—Information Analyses (070)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—Communication (Thought Transfer), Community Attitudes, Computer Assisted In-

struction, Computers, Curriculum Development, Delivery Systems, *Educational Administration, Educational Finance, *Educational Technology, Electronic Equipment, Gifted, Homebound, In-service Teacher Education, *Instructional Development, Networks, Parent Participation, Rural Environment, *Rural Schools, *Special Education, *Staff Development

Rural schools can help solve their special education problems by using advanced technology to provide instructional support (computer managed instruction, satellite television, library searches, resource networks, on-line testing), instructional applications (computer assisted instruction, reading machines, mobile vans, instructional television), management tools (record keeping, special education networks, staff retention), and staff development (satellite inservice programs, videodiscs of strategies). However, implementing technologies in rural environments involves problems because of the state of the art of advanced technology (lagging software development, equipment incompatibilities, computer system constraints), fiscal inadequacies, staff development needs, and adverse rural attitudes. Rural school systems seeking to initiate the use of new technologies should seek external financial aid, consider local rural culture and norms, create community understanding and support, involve teachers in planning processes, build staff skills to implement technologies in unique rural special education situations, and design ways to ensure student participation. Eleven successful models of using technology to solve rural service delivery problems include obtaining information about service delivery and prescriptive programming and services; organizing and providing instructional programming information; parent training; community involvement; curriculum development; saving staff costs; improving communication between service providers and administrators; and serving homebound gifted, remotely located students in their own communities. Identifiers—*Colorado Outward Bound School, Outward Bound

The Colorado Outward Bound School (COBS) provides successful adjunct programs for special populations undergoing therapy at the Adventure Home (Boulder, CO), the Juvenile Justice Program and the St. Luke's Hospital Alcoholism Recovery Unit (Denver, CO), and the Dartmouth-Hitchcock Medical Center Department of Psychiatry (Hanover, NH). The goals of the COBS therapeutic approach include increasing self-esteem, cooperation, compassion, and interdependence; resolving issues of locus of control; increasing a sense of responsibility for self and others; and learning the inherent value of risk taking. The COBS programs include three integral elements: a natural physical environment, a small social environment, and the challenges of coping with both the physical and social environments. The natural setting evokes and reinforces coping rather than defensive behaviors. The environment becomes the therapist because consequences are direct, immediate, and impartial. In small living and learning groups of 9-12, clients learn to communicate, cooperate, depend on, and trust each other in structured group discussions and in facing the common challenges of the outdoors. The challenges include natural living skills as well as frightening, risk-filled activities such as rock climbing, peak ascents, and rappelling. Successfully met challenges lead to self-confidence and a creative use of fear. (SB)

Johnson-O'Malley Indian Education Program Evaluation 1982-83.

Oklahoma State Dept. of Education, Oklahoma City.

Pub Date—Nov 83

Note—43p.

Pub Type—Reports—Evaluative (142)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—Academic Achievement, *American Indian Education, Counseling Services, *Dropout Rate, *Educational Finance, Educational Needs, Elementary Secondary Education, Extracurricular Activities, Needs Assessment, *Program Effectiveness, Program Evaluation, Public Schools, Reading Skills, Self Esteem, Student Adjustment, Student Participation, Tribes, Vocational Education

Identifiers—*Johnson O'Malley Act, *Oklahoma (East), Parent Advisory Committees, Support Services

The 1982-1983 Oklahoma State Department of Education Johnson-O'Malley program was very worthwhile. The program successfully provided supplemental education programs to meet the special educational needs of most of the 8,559 eligible Indian students in 122 school districts with average budgets in 28 Eastern Oklahoma counties. The students represented 7.8% of the student population in the districts and they were fairly evenly divided by age and grade. Over 14% of school board members in the districts were Indian, as were 65.1% of the program staff members. The program served students from over 13 tribes, especially the Choctaw, Creek, Seminole, Chickasaw, and Cherokee. Needs assessments showed students' academic needs to be greatest, especially reading, followed by self-esteem, leadership, occupational, and adjustment needs. The districts developed 185 academic, support, counseling, and other programs to meet Indian student needs. Students showed above-normal gains in seven academic areas and in vocational and enrichment areas. Support and counseling programs reported improvements as well. Several statistics indicated that the program was beneficial: only 4.4% of the students had behavior difficulties; dropouts were reduced from 173 the previous year to 152, or only 1.7%; and 731 more Indian students became involved in extracurricular activities. An Assessment of Perceptions towards Children and Family Issues: A Study of How Rural Citizens Perceive Child Abuse and Neglect. Final Report.

Pub Date—Jul 82

Note—36p.; A report submitted to the Crawford and Ida Counties Council on Child Abuse and Neglect, Inc.

Pub Type—Reports—Research (143)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—*Child Abuse, *Child Neglect, *Community Attitudes, Community Programs, Community Services, Community Surveys, *Family Problems, Local Issues, *Parent Child Relationship, Research Methodology, Rural Areas, Rural Population, Semantic Differential

Identifiers—*Iowa (Crawford County), *Iowa (Ida County)

A sample of 214 rural citizens in Iowa's Crawford and Ida Counties were surveyed to gather information on community attitudes towards the care of children and other family members. The sampled group closely paralleled the area's 1980 census norms, except in the proportion of males to females. Respondents perceived community problems with parent-child relations more frequently than they perceived other family problems. Over 25% knew of an abused child; over 40% of a neglected child. Nearly half wanted to know where to get help for an abused child. Over 66% felt that child abuse was a community problem. Respondents were most likely to call a minister for advice about abuse. Respondents rated the most important community family service as court adoption of a hard line towards abusive parents, followed by recreation programs and communication programs for parents and children. Respondents were intolerant of child abuse. Most who were aware of child neglect did not know of an agency dealing with abuse. Older residents and long-term residents were less negative about child abuse than younger, more educated respondents with higher incomes and respondents with children under five years of age, who were more likely to serve in child abuse programs. Rituals and Ceremonies for Teachers: A Demonstration-Workshop.

Pub Date—Oct 83

Note—9p; Paper presented at the Annual Conference of the Association for Experiential Education (Williams Bay, WI, September 29-October 2, 1983).

Pub Type—Guides - Non-Classroom (055) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—American Indian Culture, *Classroom Techniques, *Demonstrations (Educational), *Educational Environment, Exercise, *Experiential Learning, Outdoor Education, Sensory Experience, *Teacher Role, Workshops
Identifiers—*Ceremonies, *Rituals, Tai Chi Chuan, Yoga

A workshop and demonstration in ritual and ceremonies for classroom teachers with an elementary interest in the subject described the value and application of rituals in the classroom environment. Participants, who were greeted ceremoniously, learned that rituals can be incorporated into the classroom to mark special events, to enhance changes in attitudes and behavior, and to call attention to particularly important relationships. Participants also learned about five important elements of rituals: words, music and dance, giveaways in the American Indian tradition, special objects, and items that stimulate all the senses. The workshop contained four examples that illustrated how rituals and ceremonies can be incorporated into the classroom: (1) the initial handshake, to establish direct personal contact with students; (2) the candle lighting, to begin formal class sessions; (3) the physical exercises in the yoga and tai chi ch'uan tradition, to increase energy; and (4) the outdoor ritual, to increase the appreciation and awareness of man's interdependence with nature. Descriptors—Budgeting, Case Studies, *Community Attitudes, *Community Services, Decision Making, Delivery Systems, Expenditures, Foreign Countries, *Management Games, Municipalities, Questionnaires, *Research Methodology, *Resource Allocation, *Rural Areas, Simulation, Socioeconomic Status, Tax Allocation
Identifiers—Canada, Ontario (Erin Township), *Trade Off Games

As part of on-going research on rural public service provision, researchers illustrated the use of a methodologically rigorous tool (a "tradeoff game") for eliciting community preferences for municipal public services. The trade-off game allowed adults in 122 households in Erin Township, Wellington County, Ontario, to assess 13 currently available service alternatives and to indicate the trade-offs they would make when financial or other constraints prevented their choosing the optimum level of services. Respondents played three times, once with a fixed budget, once with a budget reduction of 10%, and once with a budget increase of 10%. Generally, players appeared satisfied with current resource allocations. They were prepared to accept slight reductions in some services for slight improvements in others. Players responded to budget increases and reductions with general reallocations of resources among all services. Overall, 41% of the players preferred the status quo, 40% preferred an increased budget, and 9% preferred a decreased budget. Generally, several socioeconomic factors, service use, and geographic variations in service quality and need affected responses. Length of residence did not. Such games can provide decision makers with comprehensive community attitude information and can effectively educate the community about budget constraints. (SB)

Coping with Change. A Study of the Effect of Government-Imposed Fiscal Restraint on a Rural British Columbia School System: The Case Study.

Pub Date—Oct 83

Note—71p; Presented in partial fulfillment of the requirements of the Doctor of Philosophy degree at Walden University.

Pub Type—Reports - Evaluative (142)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—Administrator Role, Board of Education Policy, *Board of Education Role, Boards of Education, Case Studies, Change Agents, Educational Finance, Elementary Secondary Education, *Financial Problems, Financial Support, Foreign Countries, Government Role, *Government School Relationship, *Retrenchment, *Rural Schools, Salaries, School Closing, School District Autonomy, School Funds, Superintendents, Teacher Salaries, Unions

Identifiers—*British Columbia, *School District No 4 Windermere BC

A case study of effects of government-imposed fiscal restraint on a rural British Columbia school system outlines the restraint in its various phases, its effects on School District No. 4 (Windermere), ways the district dealt with resulting problems, and the consequences, with implications for how not to implement fiscal restraint at the school board level. British Columbia's Education (Interim) Finance Act of 1982 is described. The role of the Superintendent of Schools (Chief Executive Officer of the district) is identified as that of a change agent. Fiscal measures adopted by the School Board to reduce 1982 expenditures by \$160,000 are detailed, as are difficulties in persuading teachers and other staff to accept salary reductions. Problems of 1983 budgeting, including rising costs, salary negotiations, and need to reduce expenditures further, are described. Consequences of the Board's attempt to lay off part-time employees are shown. The Board's 1983 restraint plan, which kept in mind student needs, is outlined. Implications of the re-elected provincial government's 3-year plan ("Son of Restraint") for education (increased pupil-teacher ratio, more government control over district budgets, ceilings on administrative salaries, decreased expenditures) are cited. A Program Planning Model is suggested for Board use. An appendix provides a 1983 speech by the Minister of Education. (MH)

Identifiers—Economics of Scale, *Return on Investment

A synthesis of research findings addressing effects of population and economic changes on education supply and demand in rural communities also presents policy implications, to help with local decision making. Principal research findings listed include: lack of a statistical relationship between per pupil expenditures and achievement on standardized tests; teachers' salaries are determinants of school quality as measured by achievement tests; lack of evidence of economies of size for school districts,

except small rural districts; and a consistent relationship exists among income, community wealth, school size and school expenditure levels. Principal implications for policy and future research are also stated: school decision makers must consider school system structure to determine the most effective means of meeting short- and long-run educational objectives when allocating funds, and research is needed to help school administrators minimize costs when faced with excess capacity and reduced enrollments. Also recommended are expenditure analysis to identify local factors that community leaders can modify to deliver education at least cost, research on relationships between local economic growth and local education, and consideration of local, private, social, and spillover benefits of education when determining total returns to education. An annotated bibliography describes 121 research reports published between 1960 and 1983. Research projects (25) of the Southern Rural Development Center are listed. (MH)

Identifiers—Asia, *Indicators, Pacific Region

The report of a United Nations Economic and Social Commission for Asia and the Pacific (ESCAP) Expert Group meeting, involving 13 experts from 10 countries, discusses planning national efforts to promote youth's role in development. Current systems and indicators used to assess the situation of rural and urban youth and their contribution to development are covered in the context of national problems and prospects. Two papers on the development of a model framework for planning, monitoring, and evaluating national efforts to promote youth participation in development are summarized. The framework of indicators identified at the meeting is specified. Recommended follow-up actions are listed, including a seminar to review implementation of the indicators, possible secondment of experts to monitor implementation, solicitation of appropriate financial and technical assistance from regional and international agencies, dissemination of the report to agencies in participants' own countries, and cooperation between ESCAP and other agencies to strengthen communication channels. An appendix includes the framework of indicators, presented as eight areas of concern (population, health and nutrition, housing and environment, education, employment and manpower development, public order and safety, community development and participation, and culture/leisure/recreation, divided into subareas, indicators, and classification. Swimming

The completely waterproof book contains instructions for an alternative form of swimming exercises based on the movements of 19 water creatures. The exercises can be used by groups or individuals to enhance training programs, to serve as part of a structured synchronized swimming program, or to supplement recreational activities. The book provides a balanced daily program of exercises and strokes that can be used in isolation or in sequence. Following a glossary and sections on preparation and water adjustment, the book presents 10 basic exercise forms and 10 more complex movements. For each, the book gives an introduction and detailed, illustrated instructions; notes the exercise's benefits; and gives information about the water creature on which the exercise is based. (SB)

The Role of Risk and Risk Management in Experiential Education.

Pub Date—May 81

Note—179p.

Pub Type—Reports - Descriptive (141) — Reports - Evaluative (142)

EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Accident Prevention, Accidents, Administrator Role, *Adventure Education, Experiential Learning, Field Experience Programs, *Insurance, *Legal Responsibility, Outdoor Activities, *Outdoor Education, Participant Satisfaction, *Risk, Safety, Stress Variables, Teacher Role Identifiers—Association for Experiential Education, *Risk Management

A monograph examines the role of risk and risk management in experiential education, particularly stress/challenge programming. Definitions of risk are presented. The importance of risk and stress in experiential education is emphasized. Implications of subjective versus objective risk assessment in adventure education are discussed, with reference to the goals, objectives, and obligations of adventure education and the paradox of safety versus risk. A general perspective on risk management is followed by listing five types of risks and six alternatives/tools for risk management. A chapter on safety engineering in risk management includes consideration of human and mechanical factors involved in accidents. Another chapter defines insurance, discusses its general costs and benefits, and provides insight into non-insurable risks. The concept of legal liability is examined in terms of contractual agreements involving insurance and tort law; current legal concerns in adventure education are briefly discussed. Concerns of administrators, instructors, participants, professional associations, government, and higher educational institutions are addressed. Bibliographies list 150 relevant publications. Appendices include emergency procedures and recommendations on risk management from the Association for Experiential Education, an insurance checklist, a legal liability inventory, and forms for stress/risk analysis. Descriptors—Academic Achievement, Administrator Characteristics, Advisory Committees, Blacks, Citizen Participation, College Administration, College Environment, College Faculty, *College Students, *Community Colleges, Educational Opportunity, *Educational Strategies, *Hispanic Americans, Low Income, *Minority Groups, Population Trends, Program Costs, Program Descriptions, Student Recruitment, Two Year Colleges, Whites

Identifiers—*California, *Extended Opportunity Programs and Services
A preliminary examination of Extended Opportunity Programs and Services (EOPS) in California's 107 community colleges was conducted by requesting information on individual programs; 87 responses were received. EOPS programs were established by the California Legislature in 1968 to

recruit high-risk minority and low-income students and provide them with financial assistance, peer and professional counseling, tutoring, and other services to help them succeed at community colleges and perhaps transfer to 4-year colleges or universities. In 1976, 70% of EOPS students came from minority backgrounds; 33% were Hispanic and 30% Black. The EOPS study resulted in identification of five key variables: program leadership/philosophy, organizational structure, college environment, faculty input, and community influence. The majority of EOPS directors have at least postgraduate work or master's degrees; Hispanics represent the largest group of EOPS directors, followed by Blacks and Whites. EOPS organizational structures demonstrate either self-determination (separate entities with their own financial aid and academic and personnel support services) or integration (EOPS students integrated with the regular student population). Research indicates that supportive college environments enhance academic performance of minority students. Faculty on some campuses is more actively involved than on others. EOPS advisory committees, composed of students, faculty, administrators, and community people, vary in their degree of activity. (MH)

Symposium organizers commissioned papers that examined existing Chicano research in studies of family, labor, and migration, three subjects continually recurring in Chicano research. The papers were organized in four sessions: historical and contemporary research on Chicano workers, foundations of research on Chicano families, Chicano domestic and international migration, and Chicano research and public policy. In each session, two presenters addressed guiding theoretical perspectives, major methodological approaches, and central problems and deficiencies of the research and two discussants addressed future research, the need and prospects for interdisciplinary research, and the role of basic social research in policy formation. Papers and commentaries addressed urban Chicano workers from an historical perspective, research on Chicano workers, traditions of research on Chicano workers, research on Chicano workers from a legal perspective, empirical and theoretical developments in Chicano family studies, conceptualization of history of the Chicano family, on-going research questions about the Chicano family, assessment of Chicano residential and internal migration patterns, paradigms for studying Mexican immigration, Hispanic underrepresentation in the federal bureaucracy, public policy development and the Chicano community, and public policy and the Chicano population. The volume on University of Saskatchewan graduate theses related to Canadian native peoples (Indian, Inuit, Metis) contains a brief introduction, followed by abstracts of 62 thesis projects (1912-1982), and a final section of statistics, charts, summaries, and discussions related to the abstracted research. Each research abstract consists of three sections: description of the study, research procedures, and findings. The majority of the theses described were written in the 1970s; 31 were in education fields, 10 in archaeology/anthropology, 5 each in history and psychology, 4 in geography, 2 each in sociology and law, and 1 each in economics/political science, English, and social and preventive medicine. Of the theses dealing with specific people, eight were on the Cree, two each on the Chipewyan, Inuit, Iroquois, Dogrib, and registered/treaty Indian people, and one each on urban, Slavey, Dakota, Ojibway, Dene, Sauteaux, Metis, and Blackfoot people. The majority of the studies (78%) are descriptive, with 17% historical and 5% experimental. Subjects range from descriptions of prehistoric sites, through community perceptions of important tasks for rural reservation schools, content analyses of depictions of Indian people in elementary textbooks and western comic books, and cross-cultural studies of testing and language perception. Funded in 1979, the Administration for Native American Research Analysis Project (ANARAP), had three primary objectives: (1) to create a computerized data base of the past decade of research about Native Americans (including American Indians, Alaska Natives, and Hawaii natives), especially research concerning natural and human resource development; (2) to determine major trends, gaps, and weaknesses in Native American research; and (3) to create an information system about Native American research through the development of an interpersonal network of interested parties, the beginning of "The Journal of Native American Studies," and the exhibition of ANARAP's data base at conferences. The project revealed three goals for Native American studies programs in the 1980s: (1) research must become a primary concern for students in Native American programs; (2) communication must be a more vital part of the education of students in Native American programs; and (3) Native American studies programs should assume the role of mediator and translator of academic research for their broader ethnic community. To accomplish these goals, Native American studies programs must overcome a growing anti-intellectual and anti-research orientation in the Native American community. The report urges a collaboration between academia and ethnic studies. (SB)

Identifiers—*Texas

The pamphlet describes three Hogg Foundation-funded Texas programs (one exclusively hospital-based, one hospital-based with extensive linkages to community resources, and one community-based) which serve predominantly high-risk, low-income Mexican American families. First described are social work services connected with the Driscoll Foundation Children's Hospital Neonatal Unit, which serves Corpus Christi and a large, sparsely-populated rural area, with many newborns referred by physicians in surrounding counties. The article notes that parents cannot always accompany children to the hospital, so social workers provide crucial support for parents experiencing separation from infants during hospitalization, death of an infant, or prospects of lifetime care for severely-disabled infants. Austin's Program Padres e Hijos (Parent-Child Program) is described as a low-cost project emphasizing nonformal, in-home education based on the cultural values of the Mexican American community to enhance parenting skills and promote physical and mental health of infants. A final article discusses the Mexican American Preterm Project (San Antonio), which concentrates on infants weighing less than 2 1/2 pounds at birth, and aims to identify the needs of parents with regard to their newborns and enhance family stability by providing consultation and referrals to specialized service programs in the community. Identifiers—*Virginia

Third in a series by the Rural Success Program at Virginia Commonwealth University (VCU), the book provides a view of selected organizations and literature of potential interest to rural employment and training practitioners and planners. The book is divided into two sections. The first contains summaries of interviews with representatives of 26 non-profit organizations which reported providing technical assistance to rural employment and training practitioners and planners in Virginia. For each of 11 national, 6 regional, and 9 state-level organizations, the book lists the organization's mission, current projects, specific services, and publications, and explains how to access the organization's services. A partial list of 21 relevant state agencies and others (adapted from VCU's 9-volume series on employment, training, and support services) completes the first section. The second section contains an annotated bibliography of selected relevant books, reports, newsletters, and other materials. For the 27 books and reports, all published since 1975, the bibliography lists the author, title, and publication information, and gives a brief annotation. For the 10 newsletters listed, the bibliography gives the title, publisher, content, distribution, length, and subscription information. The bibliography also provides author, title, publishing information, and an annotation for six other publications. (SB)

Researchers compiled case studies describing 15 successful rural employment and job training programs in 10 states, to share the information with planners and practitioners and with state agencies in Virginia that were responsible for enhancing local job training and employment opportunities. Researchers, who gathered information about the case studies during site visits or telephone interviews, noted that the programs combined job training with at least one of the following characteristics: successful placement, job creation, job upgrading, or service to difficult-to-serve populations. Of the eight programs visited and described in detail, three featured non-profit corporations (of which two were economic development corporations), four featured the roles of 2- and 4-year higher education institutions in job training and creation, and one featured the role of the community college and local government in job creation. The other seven programs, described in less detail, featured the roles of job placement in rural employment and training, a community-based organization, an Indian reservation, a county government consortium, a large non-profit corporation, and a relationship between state government and a manufacturing cooperative. The detailed reports describe the programs' problems and goals, solutions, training, implementation, outcomes, setting, and contacts. The other programs are summarized. (SB)

The text of the oversight hearing on migrant education (February 17, 1983) contains statements and testimony from three representatives of state and national migrant education organizations and from three migrant mothers. The statement and testimony of Frank L. Contreras, Director of the Texas Migrant Education Program and President of the National Association of Directors of Migrant Education, question changes in the definition of eligibility in the Administration's proposed regulations on migrant education, particularly the requirement that to be considered migratory a child must have had his education interrupted during the preceding 12 months. The statement of Raul de la Rosa, Wash-

ington State Director of Migrant Education, also questions the proposed changes and reduced funding and praises the Migrant Student Record Transfer System. The testimony and statement of Ambrosio Melendrez, representing the Texas Association for Compensatory Educators, likewise objects to the proposed regulations. Statements of migrant mothers from Wisconsin, Colorado, and Texas describe the difficult lives of migrants, praise the existing migrant education program, and express fears that the proposed changes will hurt migrant children and migrant education. Additional information includes letters and statements protesting the Administration's proposed changes and budget reductions for migrant education, as well as interrogatories on migrant education for Secretary of Education, T. H. Bell. (MH)

Identifiers—*George I Sanchez Junior Senior High School TX, Houston Independent School District TX, Texas (Houston)

Established in 1970 and operated by the Association for the Advancement of Mexican Americans, the George I. Sanchez Junior Senior High School (Houston, Texas) is an alternative school for Hispanics in grades 7-12. The school, staffed originally by volunteers, acquired a full-time executive director in 1973, established relations with the Houston Independent School District (HISD) in 1975, obtained accreditation in 1978, and graduated its first class in 1979. Like many alternative schools, the George I. Sanchez school faces challenges in the areas of curriculum development, accreditation, staffing, resource development, equipment, and especially funding. Although the Sanchez school has obtained funding from the Model Cities Program, the Emergency School Aid Act, and the Department of Justice, it still faces funding problems. Because most of the students come from lower socio-economic status families, they cannot pay tuition. The school serves the community in several important ways: as the last resort for many Hispanic students, as an ombudsman for the Hispanic community with HISD, and as a liaison between parents and schools. Alternative schools provide various advantages for Hispanic students including opportunity for a high school education, better student-teacher relationships, and better self-concept. (SB)

Identifiers—*Bureau of Indian Affairs, Congress 97th

The text of the Senate Select Committee on Indian Affairs' hearing on the proposed reorganization of the Bureau of Indian Affairs (BIA) notes that reorganization would consolidate BIA's 12 area offices into 5 regional service centers, create 2 special program offices and 3 field offices, and reduce 12 area education offices to 5 regional centers. Statements of BIA officials defend their reorgani-

zation plan. Statements from Senators indicate they felt BIA plans were not clearly presented, might have been formulated primarily to reduce the BIA budget by \$16 million rather than to make operations more efficient, and did not thoroughly weigh possible adverse effects. A prepared set of questions and answers on effects of reorganization on Indian education, submitted by Senator William S. Cohen, is included. A statement from David Quaky, legislative director of the National Federation of Federal Employees, indicated adamant opposition to the reorganization. A statement from Elmer Savilla, executive director of the National Tribal Chairmen's Association, urges the Committee to insist that the Department of the Interior stop implementation of the reorganization and commence drafting a plan which would be in full consultation and cooperation with the tribes. Letters and statements from other tribal groups also indicate opposition. (MH)

Identifiers—*Boomtowns, Energy Development, Impact

While continuing education is vital to all practicing social workers, human service workers in rural areas that are undergoing rapid change due to energy development may face particular problems in obtaining additional training and education. When rural areas become boom towns and social disturbances increase, human services personnel generally experience increased caseloads and new roles and responsibilities. However, because most boom towns do not have formalized planning mechanisms, social workers find themselves without the training necessary in their new circumstances. In addition, distance, weather, narrow professional orientation, lack of federal funding, and training materials focused on urban issues can be negative incentives to further human services training. Consequently, each small town and each state should have a body responsible for planning, coordinating, and evaluating continuing education for human service workers. The planning bodies should assess needs and formal and informal resources in rapidly developing towns. The planning bodies should use all local resources available and some outside consultants (such as university personnel) to provide a full array of social services. Continuing education programs for social service workers should be based on needs assessments, should be versatile, should capitalize on advances in instructional technology, and should be carefully evaluated. Identifiers—Public Lands, *University of Wisconsin

The two-part manual is designed as a source of information to aid University of Wisconsin Extension Faculty in helping citizens understand land use problems and to assist in the development of work plans, resource allocation, program priorities, and budget preparation. Part I describes the rationale for land use planning and identifies and discusses criti-

cal state land resources. It describes communities where land use education takes place, explains land use planning, discusses planning for critical resources and the potential relationship to a comprehensive plan, notes how to implement a land use plan, explains administrative land use programs, and discusses program evaluation and extension programming. Part II contains an annotated listing of materials useful in developing land use programs. Organized by the subjects outlined in Part I, Part II lists approximately 475 Wisconsin Extension, University of Wisconsin, state of Wisconsin, and other state/federal publications and classifies them according to audience appropriateness. The entries include author, title, publication information, source, and, for audio-visual materials, time and cost. Appendices include eight case studies reported by Extension agents involved with land use planning at the county level, and a list of materials available from other state governments and inter-governmental organizations. Identifiers—Appalachia, *Income Improvement, *Kentucky (East)

The study identified possibilities for improving farm incomes on limited-resource farms in eastern Kentucky. Objectives were to describe farm operations of full-time Appalachian farmers who had gross sales of less than \$5,000 in 1972, estimate potential increases in net farm incomes from given resources, and identify nonresource constraints on realization of higher incomes and suggest measures for removing or relaxing these constraints. Usable questionnaires obtained from 102 low-income farmers indicated that these farmers averaged 47 years of age and 6.5 years of education, owned 81 acres of land and rented 24 additional acres. Of the 109 acres, roughly 69 were woodland. Most income was derived from crops, with tobacco being the most important. Results showed that animal-power farms would more than double their net income by using more profitable enterprises, and could increase income 50% more by adopting improved technology; tractor-power farms would increase income by 70% from more profitable enterprises, and another 44% from improved technology. Educational implications were that public education programs were needed to inform farmers of the profitability of various enterprises and to make available information needed for those enterprises, but that farmers' age, tradition, and limited education presented obstacles to change. Identifiers—Appalachia, Income Improvement, *Kentucky (East)

Public investment in technical assistance to limited-resource farmers may be completely consistent with hard-headed taxpayer self-interest, because such investment provides a way for the impover-

ished to raise their incomes so they will no longer draw public-assistance benefits and will contribute more to financing public services by paying additional taxes. Conventional extension technical-assistance programs rarely reach under-educated, limited-resource farmers, so extension programs have recently recognized the necessity for more personal, on-site instruction. Paraprofessional aides recruited from among better-educated, more progressive farmers have been used with apparent success. Results of a 1977 survey of 120 low-income, eastern Kentucky farmers indicated that (1) genuine opportunities for improving net farm incomes exist which could make more than half of present welfare recipients ineligible for benefits; (2) even with much-improved management, a substantial number of farm families would remain eligible for some public assistance; and (3) a 50% improvement in the net public-sector accounts position would justify expenditures on technical assistance well above the average annual costs of \$220 per farm (1977 dollars) incurred in Missouri's small-farm program, even if potential demonstration effects on other low-income farms and farm families are ignored. Descriptors—Academic Achievement, Adult Education, *Adult Farmer Education, *Change Strategies, Economic Change, *Economic Status, Educational Strategies, Extension Education, Farmers, Farm Management, *Low Income Groups, Rural Economics, Rural Education, *Rural Farm Residents, Taxes, Technical Assistance, *Welfare Recipients, Welfare Services

Identifiers—Appalachia, Income Improvement, *Kentucky (East)

The paper explores whether the taxpaying public and limited-resource farm families who receive public welfare assistance to supplement meager farm incomes would be better off if some of these welfare funds were used to help the farmers help themselves by more efficient and profitable use of their farm resources. Data from an eastern Kentucky survey of 120 limited-resource farmers are cited: the farmers averaged 45 years of age, 7.2 years of schooling, and sold less than \$10,000 worth of farm products in 1977. Other survey information cited indicates that such farmers infrequently participate in conventional extension programs or solicit assistance from extension offices, and that suitable technical assistance will have to be aimed specifically at these farmers. The potential of well-designed, low-cost technical assistance programs for improving efficiency of small-scale farmers is explored by making conservative assumptions about feasible productivity levels and farmer responses to such programs. Analysis supports earlier studies showing substantial opportunities for income improvement of these farms and indicates that with more efficient farming methods and small earnings from off-farm work, more than three-fifths of those now eligible for public assistance would become ineligible, cutting welfare assistance costs to less than one-third of present levels. Identifiers—*Appalachia, *Kentucky, Recession

Although there was expectation that the current recession would bring a new wave of Appalachian Kentuckians back to their homeland hills, as had previous recessions, no great "return to the hills" (or even to other areas of the state) has materialized. Unemployment insurance claims by people formerly employed in other states have not increased in Appalachia or in Kentucky generally as the recession of the late 1970's and early 1980's has deepened. Transfers of children to public schools from out-of-state districts have increased only slightly, reaching only about 1970-71 levels. Former Appalachian Kentucky residents appear to be rather completely established in the communities to which they have migrated. Employment opportunities in the region and retirement preferences, not economic insecurity or inability to cope with urban life, appear to be the reasons for most Appalachian return migration. Housework: A Changing Constant.

Pub Date—Feb 84

Note—14p; Paper presented at the American Farmwomen in Historical Perspective Conference (Las Cruces, NM, February, 1984).

Pub Type—Opinion Papers (120) — Speeches/Meeting Papers (150)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—Child Rearing, Economic Change, Extension Education, Family Environment, Family Financial Resources, Family Life, Farm Labor, *Females, Homemakers, Males, *Rural Farm Residents, *Sex Role, *Social Change, Social Environment, *Social History, United States History

Identifiers—*Farm Women, *Housework

The paper contrasts housework done by farmwomen of 1900 with that done by today's farmwomen. The drudgery of turn-of-the-century housework, particularly doing the washing is detailed. The fact that the family farm was seen as a partnership based on strict division of labor is noted. Changes in farm life from 1920 to the present are documented, including a 1929 criticism of the small amount of time farmwomen could spend in child training. The advent of Cooperative Extension agents and Homemakers Clubs to educate farmwomen as alternatives to traditional, time-consuming ways of doing things is discussed. Changes in farm housework and farmwork are described; and, fears are expressed that today's farmwomen may have lost their traditional role of domestic providers, and become invisible in a new role where they spend less time on housework and more time on farmwork and off-farm work. Identifiers—*College of Saint Rose NY, Public Law 94 142

The paper summarizes the first year (1983-84) of a 3-year rural education project entailing collaboration between the College of Saint Rose (Albany, New York) and rural chief school officers (CSOs) to improve service to handicapped students. Project objectives are listed: to improve education of mainstreamed handicapped students by helping CSOs plan staff development programs, utilize expertise of rural CSOs to improve preservice curriculum at the College, provide practicum and student teacher

settings to address the unique needs of handicapped students in rural schools, provide preservice students the opportunity to serve as "rural interns," and provide a model program for other teacher training programs. Problems of serving handicapped children in rural areas are discussed. Project organization is described, including the orientation meeting with participating CSOs from 15 target school districts, and the first of 3 regional cooperative meetings between CSOs and high-level administrators from their districts, grant staff and consultants, and members of the College's Rural Task Force. Organization for the project's subsequent years is covered. Project results for the year are noted, including success as a catalyst and facilitator of inservice training to rural CSOs and formation of the Rural Task Force. The project's Needs Assessment Instrument is appended. (MH)

Dictionary: Papago/Pima-English, English-Papago/Pima = O'othham-Mil-gahn, Mil-gahn-O'othham.

Pub Date—83

Note—174p.

Available from—University of Arizona Press, 1615 E. Speedway, Tucson, AZ 85719 (\$14.95).

Language—English; Papago

Pub Type—Reference Materials—Vocabularies/Classifications (134)—Books (010)—Multilingual/Bilingual Materials (171)

EDRS Price—MF01/PC07 Plus Postage.

Descriptors—*American Indian Culture, *American Indian Languages, American Indian Reservations, Definitions, *English, Etymology, Grammar, Kinship, Linguistics, Maps, Numbers, *Papago, Phonology, *Pronunciation, Time, *Translation

Identifiers—Papago (Tribe), *Pima, Pima (Tribe)

Useful for both linguists and laymen because of its scientific validity and accuracy, the second edition of the Papago/Pima-English dictionary gives full definitions for over 5,000 entries. Beginning with a practical alphabet for Papago-Pima and a guide to the dictionary, the book is divided into two parts. In addition to the lexical entries, Part I (Papago/Pima-English) contains instructions and information regarding main entries, subentries, spelling, singular and plural forms, distributive forms, alternate forms, parts of speech labels, definitions, prefixes and suffixes, combining elements, parts of speech, taxonomic classifications of plants and animals, cross references, etymology, usage, and abbreviations and symbols. Part II (English-Papago/Pima) contains its own list of abbreviations and symbols in addition to the lexical entries. The dictionary contains appendices containing information on Papago/Pima phonology, time and calendar, cultural terms, kinship, maps and placenames, numbers, and pronunciation. The dictionary is believed to be the only published dictionary of the Papago/Pima language. (SB)

Iowa Farm Women in the 1930s—A Reassessment.

Pub Date—Feb 84

Note—26p.; Paper presented at the American Farm Women in Historical Perspective Conference (Las Cruces, NM, February 2-4, 1984).

Pub Type—Historical Materials (060)—Speeches/Meeting Papers (150)

EDRS Price—MF01/PC02 Plus Postage.

Descriptors—Adult Education, Clubs, Community Attitudes, Community Involvement, Community Organizations, Economic Climate, Extension Education, *Family Income, Farm Accounts, Farm Labor, Females, Food, Leadership Training, *Rural Economics, Rural Environment, *Rural Extension, *Rural Farm Residents, *Rural Schools, Rural Urban Differences, School Community Programs, School Community Relationship, Sex Role, United States History

Identifiers—Depression (Economic 1929), *Farm Women, *Iowa

Both economically and socially, Iowa farm women played important roles in supporting and maintaining the rural population during the 1930s. They continued their patterns of production for consumption and for income, and during the Depression this production constituted a larger and more significant part of the household economy. Women kept large gardens and orchards and dried or preserved fruits and vegetables for later use; they butchered poultry and gathered eggs for family use

and for sale; they separated cream and sold cream, butter, and cheese to town customers. While poultry raising was expected of women and was not considered technically sophisticated, it entailed considerable skill; women learned it from their mothers and from extension education programs and farm journals. Ironically, many farm women and their families experienced improved living conditions during the 1930s, because of improved automobiles, better roads, and especially electricity. Many took part in more activities outside the home. Rural schools provided a focal point for rural neighborhoods, as box socials, spell downs, picnics, and general neighborhood meetings were held there. Schools kept people in touch and provided an important social outlet for neighborhood residents. Farm women also took part in many extension activities, including helping select the annual extension project and attending leadership training schools. (MH)

Outdoor Education Committee Report.

North York Board of Education, Willowdale (Ontario).

Pub Date—Mar 83

Note—66p.

Pub Type—Reports—Descriptive (141)

EDRS Price—MF01/PC03 Plus Postage.

Descriptors—*Board of Education Policy, Budgets, *Day Camp Programs, Elementary Secondary Education, Field Trips, Foreign Countries, *Nature Centers, Needs Assessment, Outdoor Activities, *Outdoor Education, Parent School Relationship, Program Budgeting, Program Descriptions, *Program Evaluation, *Resident Camp Programs, Student Transportation

Identifiers—*Ontario (North York)

The committee report on the North York (Ontario) outdoor education program reviews the program and related policies, identifies concerns that need addressing, and recommends prioritized and cost-effective actions. A section of background information covers history of outdoor education, present Ministry of Education policy, and present North York Board of Education policy, and lists three pro-

gram support documents published by the Board. The outdoor education program is discussed under categories of day programs, day center programs, and residential programs. A general section addresses such concerns as curriculum/program, parental permission, program awareness, transportation, budget control, records, and definition problems. A summary of recommendations lists 7 for the day program, 7 for the day center program, 11 for the residential program, and 14 general recommendations, including encouraging teachers to use out-of-classroom activities as part of regular programs, encouraging senior students to help with elementary and intermediate outdoor education programs, and preparing a television presentation on North York outdoor education programs, for public and staff information. Eleven appendices include budgets for program components, a comparison chart of metropolitan Toronto outdoor education residential centers, 9-part Board policy on outdoor education, excerpts from a transportation report, and plans for future developments. Descriptors—*American Indian Education, Comparative Analysis, Educational Environment, Elementary Education, English, Grade 3, Grade 4, Linguistics, Research Methodology, Semantics, *Skill Development, Student Behavior, *Student Writing Models, *Syntax, *Writing Processes, Writing Skills

Identifiers—Indian Oasis Public School District AZ, *Orthography, *Papago (Tribe)

To gain an understanding of the development of the composing process, researchers observed, categorized, analyzed, and collected the writing of 10 Papago third and fourth graders in the Indian Oasis Public School District of Arizona over a period of two years. Of 30 children originally chosen to represent lower, middle, and upper development levels, 6 became the focus of in-depth study. Researchers collected data from observation; videotapes; interviews with parents, children, and teachers; and debriefing notes. They also studied 300 English language texts (over 17,000 words) produced by the children in regular classroom settings to determine the status and development of the orthographic features (spelling, punctuation), syntactic features (clauses, phrases, terminable units), and semantic and pragmatic issues including textual cohesion, contractions, dialect, metalinguistic knowledge, and overt behaviors accompanying writing (such as revision, subvocalization, rereading, interruptions, resource use, stop and think). The report describes the findings and the educational environments in the children's classrooms. It includes detailed analyses of the development of the writing process of each of the six children studied in depth. The analyses include information regarding the children's background, samples of the children's work, excerpts from the interviews, and descriptions of the various aspects of the writing process. The Social Worker, the Community and the Rural

Family: The Implications for Worker Training.

Pub Date—Jul 82

Note—8p.; Paper presented at the Annual National Institute on Social Work in Rural Areas (7th, Des Moines, IA, July 24-27, 1982).

Pub Type—Guides—Classroom—Teacher (052)

EDRS Price—MF01/PC01 Plus Postage.

Descriptors—Change Agents, *Cross Cultural Training, *Cultural Awareness, *Cultural Context, Cultural Influences, Delivery Systems, Family Environment, Family Influence, Higher Education, Human Services, *Professional Training, *Rural Population, Self Evaluation (Individuals), Sensitivity Training, Socialization, *Social Workers, Training Methods, Training Objectives

Identifiers—Historical Background, *Rural Culture

The objectives of a university training program for

rural social workers are to develop insights into cultural and stereotypical attitudes of social workers and to increase worker cultural sensitivity and awareness of value differences. The focus of the training is on the process by which workers evaluate extrinsic and intrinsic factors related to clients and clients' social situation. The model evolved is similar to those used in cross-cultural training, and requires workers to examine their own emotions, values, and self-esteem, and to be open to becoming involved and changed. The goal of training is to help workers gather information in a situation where facts are often less important than perceptions and attitudes. Major concepts are the historical context of today's rural family, human service workers as agents of the rural service delivery system, and the family as a social learning system. For each major concept, the paper lists important related concepts, and title, author, and publication date for resources (14, 11, and 10 resources, respectively) from various disciplines. Six related journals are also listed, with availability information. (MH)

Identifiers—*Alaska (Wainwright), Learn Alaska Network, University of California San Diego

Part of the North Slope Borough District, the two schools in the Inupiat village of Wainwright, Alaska, began to take advantage of communications technology for teaching, administration, and staff training purposes in 1983. At that time, three teachers took a course offered by the University of Alaska via computer and audio-conference on the subject of using computers as communications tools. The teachers altered the increasing reliance of the schools on audio-conferencing for administrative and instructional uses. They began to use computers to communicate with supervisors in other locations, to teach math drills and practices, to teach science, and to improve research projects. However, the most interesting use of the computer was as a communications tool for instructional and administrative purposes. Using the computer and one of many electronic networks, students exchanged information with students in California; teachers exchanged information with other teachers and with supervisors; administrators sent notes regarding travel schedules, book orders, test scores, and evaluation procedures; and university instructors presented information about the academic consequences of computers. Wainwright teachers expected to expand computer use for the language arts program and social studies. Special education, staff training, and software use were key issues in the move to computer communications. (SB)

Identifiers—BASIC Programming Language, *Hills-

boro Deering Cooperative School District NH, LOGO Programming Language, PASCAL Programming Language

The successful computer program in rural Hillsboro-Deering (New Hampshire) Cooperative School District was the result of a program of excellence in education adopted by a completely new and inexperienced school board in 1978. Supported both by oldtimers and by newcomers, the board acquired new administrators, purged the faculty, and acquired \$15,000 for three Apple computers which were the basis of the computer program. The district hired a zealous computer instructor who, over the next six years, organized a computer room at the joint site of the elementary, middle, and high schools, and expanded it to include 20 Apple microcomputers and a wide variety of software. Always full of students, the casually-run computer room became the site of much learning for elementary, secondary, and special education students of all abilities. The computer instructor developed and taught an introductory computer course for the faculty and established an elaborate K-12 computer curriculum. Beginning in kindergarten with games and minimal word processing, the curriculum advanced students to subject area software, LOGO, and word processing during the elementary school years, started them programming LOGO in grade 8, and continued teaching them BASIC and PASCAL programming and independent studies in high school. Identifiers—*California (Mendocino County)

The county education office of Mendocino County, California, serving nine school districts and 11,800 elementary and secondary students, began planning for computers in 1979-1980, purchased two central computers, and by 1983 had one computer or terminal for every 40 students in the county. The county was characterized by its very enthusiastic administrators and by their willingness to experiment and make mistakes. It successfully focused its initial efforts on using computers to improve administration and special education. An evaluation visit to four of the districts revealed that most districts used computers for administrative purposes but that computer instruction was growing. Elementary schools offered some programming and many high schools offered computer literacy, word processing, and programming courses. One alternative high school offered an extensive program of creative computing including music and graphics generation. Despite tight economic conditions, the county managed to find funding for computers from state and federal sources, grants, and discretionary funds. The county spent about \$1,000,000 for hardware and software from 1980-1983 and decided to budget \$175,000/year to maintain the equipment. The effect of geographical isolation on the desire for information was seen as significant to the county's successful move to computer use. (SB)

Identifiers—*Crosby Independent School District

TX, Texas (Crosby), *Vendors

The Crosby Independent School District near Houston, Texas, planned to introduce microcomputer instruction to its nearly 3,000 students in slow stages that had teachers and students learning at the same time. The initial impetus for computers came from an administrator who found useful information at a Regional Service Center of the State Education Department. The Center, known for its emphasis on technology, offers training, purchase assistance, software information and exchanges, library materials, trade shows, time-sharing, and workshops to help introduce computers to area schools. Using federal and grant funding, the district purchased 12 Radio Shack microcomputers. The vendor assisted in staff training and software choice. By the spring of 1983, seven microcomputers were used in the high school to teach computers as a tool. Courses in computer literacy and basic programming were available. Student interest was high but teacher interest was low. In the elementary school, five microcomputers were used to augment remedial math with practice drills and to augment the gifted and talented program with BASIC programming. The district planned to add 20 microcomputers during 1983-1984. Crosby's plan to purchase hardware and introduce it slowly had both advantages and disadvantages. The most important variables in shaping the plan were district size, finances, and location. (SB)

Identifiers—*Indian Child Welfare Act 1978, Papago (Tribe)

A training manual, intended to foster cooperative, coordinated approaches to resolving Indian child welfare cases, uses the case study approach to help tribal social service and court workers recognize strengths of American Indian and Alaska Native families. The first chapter covers primary aspects and needs of children of all cultures, from infancy through the teenage years. "Approaching a Case," the second chapter, answers questions about the desirability of a holistic approach to troubled children and families; role of tribal courts; nature of court-ordered case studies; and need for special juvenile or children's courts. The next chapter introduces the three case studies which follow. Case studies discuss reasons for child neglect by a teenage mother, a custody dispute between parents (and grandparents) of a 5-year-old mixed-blood child, and the life and plight of a troubled, drug-abusing teenager. The seventh chapter discusses the cases as part of a cycle of family disruption, and summarizes basic principles which should underlie efforts to break the cycle. Creative and expanded use of existing tribal resources is covered in the eighth chapter. The final chapter reviews major points. Appendices list further readings, give definitions, discuss the manual's training uses, describe Papago child welfare procedures, and cover funding and other resources. (MH)

Identifiers—*Leaves (Trees)

Leaf activities can provide a means of using basic concepts of outdoor education to learn in elementary level subject areas. Equipment needed includes leaves, a clipboard with paper, and a pencil. A bag of leaves may be brought into the classroom if weather conditions or time do not permit going outdoors. Each student should pick a leaf, examine it carefully, then describe it to a partner or in a group of three. Vocabulary development is encouraged with use of such words as "leaf," "stem," "vein," and adjectives describing shape and color. Possible learning areas include identifying types of trees by their leaves; language arts (involving oral activities, factual writing, fictional writing, and poetry about leaves); art (using leaves in art projects); music (listening to leaf sounds, finding songs about leaves, and listening to musical compositions that suggest trees and leaves); mathematics (measuring, discussing, counting, and sorting leaves); science (observing and comparing color, structure, size, shape, and odor of leaves); the senses (observing visual, tactile, sound, and scent aspects of leaves); and understanding a leaf (including scientific explanations of the functions of leaves). Four general concepts/aims of outdoor education are given. (Author/MH)

Identifiers—*Egypt

Policies, plans, and programs for development and innovation in Egyptian education are discussed. Chapter 1 focuses on the fundamentals of general education in Egypt, examining fundamental traits of Egyptian society, local and international variables, general trends of educational development and innovation, traits and goals of future education, and basic principles guiding educational development in this country. The latter include education for deepening democracy, for comprehensive development and productive work, in the context of Arab cultural identity, and as a lifelong process. Chapter 2 introduces a strategy for implementing the new educational policy. General principles and outline of the proposed plan are considered in chapter 3. Also considered are programs for developing: (1) the structure and context of education; (2) educational welfare, evaluation techniques, and student inflow rates; (3) teacher education and training; (4) buildings, equipment, and educational aids; and (5) educational administration, data and research systems, and funding. ED 241 251**Elementary School Mathematics: Annotated Bibliography. Second Annual Update.**

CEMREL, Inc., St. Louis, Mo. R&D Interpretation Service.

Pub Date—Dec 81

Note—37p.

Pub Type—Reference Materials - Bibliographies (131)

EDRS Price - MF01/PC02 Plus Postage.

Descriptors—Annotated Bibliographies, Elementary Education, *Elementary School Mathematics, *Mathematics Instruction, *Mathematics Materials, Resource Materials

Identifiers—PF Project

Twenty-two books related to the teaching of elementary-level mathematics are listed alphabetically by author in this annotated bibliography. With few exceptions, the books were published between 1976 and 1980. For each citation, information on author, publisher, and availability as well as a brief abstract is provided. A subject index is also included. (LP)

ED 241 252**Educational Plan: Title I Elementary Mathematics Program. Description, Performance Objectives, and Tests. Revised.**

Descriptors—Arithmetic, *Behavioral Objectives, Decimal Fractions, Elementary Education, *Elementary School Mathematics, Geometry, Item Banks, Mathematical Logic, *Mathematics Instruction, Measurement, Number Concepts, Probability, Program Descriptions, Ratios (Mathematics), *Sequential Approach, *Test Items

Identifiers—Elementary Secondary Education Act Title I, PF Project

This three-part guide presents a brief program description along with lists of performance objectives and lists of test items for the Des Moines (Iowa) Public Schools Title I Elementary Mathematics Program. The program description provides background information on the Des Moines Public School District and describes the student selection/screening process, the instructional process, and the parent-school-communication process used in the program. The performance objectives section presents objectives for kindergarten through eighth grade for the following ten strands: (1) measurement; (2) logic and sets; (3) numeration; (4) addition-subtraction; (5) multiplication-division; (6) rational numbers; (7) geometry; (8) decimal fractions; (9) proportion and percent; and (10) probability. This section also includes an objectives hierarchy chart which divides the K-8 sequence into 29 steps and lists the objectives for each strand that should be taught at each step. The test items section offers test items which are keyed to the performance objectives for each strand with the exception of the probability strand. (DC)

ED 241 253**Strategies & Materials. Teaching Strategies: Title I Elementary Mathematics Program, 1978-79.**

Descriptors—Addition, *Arithmetic, Decimal Fractions, Division, Elementary Education, *Elementary School Mathematics, *Fractions, Learning Activities, *Manipulative Materials, Multiplication, *Sequential Approach, Subtraction, Teaching Guides, Teaching Methods

Identifiers—Concrete Operations, Elementary Secondary Education Act Title I, PF Project

This guide contains six sections which offer suggested sequential steps for teaching addition, subtraction, multiplication, division, fraction concepts and algorithms, and decimal fractions. Based on the manipulative approach, the guide offers activities and teaching methods which give students many opportunities to work with models. This approach gives the students, who are in the concrete stage of development as defined by Piaget, help with the discovery and understanding of the mathematical concepts. To help the teacher guide the students through the lessons, a two-column format is used in which sample questions and teaching suggestions are listed to the right of the activities. An introductory page for each section describes the approach used and presents background information on children's learning and on the mathematical operation or concept involved. Des Moines (Iowa) Mathematics Performance Objective numbers are listed to the left of appropriate lessons. (DC)

Identifiers—Elementary Secondary Education Title I, PF Project, *Quantitative Thinking

Developed for elementary teachers, this activity unit is designed to teach students the importance of estimation in developing quantitative thinking. Nine ways in which estimation is useful to students

RC 014 676

are listed, and five general guidelines are offered to the teacher for planning estimation activities. Specific guidelines are provided for teaching estimation in the following areas: quantity; rounding; addition; subtraction; money; multiplication; division; measurement (including spatial relationship, body measurement, and linear measurement); volume; temperature; time; and mass. The five main activities offered are (1) guessing the number of objects on a piece of wallpaper; (2) weighing rocks; (3) measuring the length of wallpaper, including metric measurement; (4) measuring shoe string licorice using a metric ruler; and (5) estimating the number of chews in a Tootsie Roll, the number of sips in a glass of Kool-Aid, and the amount of time it takes to melt peppermint candy. Eight additional short activities are offered at the end of this unit. Also included is a list of the sources used to develop this unit. (EM)

"Numbers, Numerals, Numeration": Activities Using Numeration Cards with Emphasis on Place Value, 100 Board Activities, and Number Words. (Grades 1-4.) Title I Elementary Mathematics Program.

Des Moines Public Schools, Iowa.

Pub Date—79

Note—18p.

Pub Type—Guides - Classroom - Teacher (052)
EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Elementary Education, *Elementary School Mathematics, Instructional Materials, Learning Activities, *Mathematics Instruction, *Number Concepts, *Numbers, Reinforcement Identifiers—Elementary Secondary Education Act Title I, Numeration Tasks, PF Project

Mathematics activities and materials for teaching and reinforcing number concepts are presented. The activities, which rely primarily on number cards, are divided into the following sections: (1) sets less than ten; (2) the teen numbers; (3) sets and numerals to 100; (4) numeration; and (5) words that represent numbers (e.g., "one=1"). An inventory of number cards needed for the activities is included along with samples of the following number cards: picture cards representing the numbers 1 through 19; picture cards representing sets of ten; expanded numeral cards for teen numbers (e.g., "10+1," "10+2," etc.); and overlay cards for teaching place value up to the thousands place. Des Moines (Iowa) Performance Objective numbers which relate to the activities are listed on the left of each page. (DC)

Acid Rain. Activities for Grades 4 to 12. A Teacher's Guide.

National Wildlife Federation, Washington, D. C.

Pub Date—83

Note—13p; The Acid Rain Teacher's Kit, item #79678, may be purchased from The National Wildlife Federation, 1412 16th St., NW, Washington, DC 20036 (\$1.00, check or money order).

Pub Type—Guides - Classroom - Teacher (052)
EDRS Price - MF01 Plus Postage. PC Not Available from EDRS.

Descriptors—*Air Pollution, *Ecology, Environment, Federal Legislation, Interdisciplinary Approach, Intermediate Grades, Learning Activities, Science Activities, *Science Experiments, Secondary Education, Teaching Guides, *Water Pollution

Identifiers—*Acid Rain, Clean Air Act, PF Project This teacher's guide on acid rain is divided into three study areas to explain: (1) what causes acid rain; (2) what problems acid rain has created; and (3) what teachers and students can do to help combat acid rain. Instructions for activities within the study areas include suggested grade levels, objectives, materials needed, and directions for the teacher. Many of the activities are science experiments or investigations. Experiments involve learning about acidity, the water cycle, sources of acid rain pollution, air-borne particles, acid rain's effects on aquatic life and plant seedlings, and the buffering capacity of types of soil. Other activities involve talking with people in the community, learning about the Clean Air Act, and writing letters to

elected representatives. It is suggested that the activities could be incorporated into many subject areas and that a motivating study approach would be to organize the class into small study teams. A crossword puzzle, a glossary, and a bibliography of 17 journal articles, one filmstrip with cassette, one film, and one set of curriculum materials is included. (EM)

Identifiers—Dissection, Fishes, Fishing, Fishing Industry, Fish Products, Gulf of Maine, New England, PF Project

Designed to provide teaching materials for middle school and junior high school teachers in northern New England, this marine education unit presents teacher-tested ideas and activities for use in the classroom and in field trips to the ocean. Each unit includes ideas and activities drawn from a variety of content areas so teachers of many different subjects can make use of them. Although specific objectives are given for each activity, the unit has two general objectives: (1) to help students develop improved knowledge about marine fish, and (2) to develop increased awareness of the beauty and complex interrelatedness of marine fish. Students learn about these complex interrelationships by studying fish shapes, classes of fish, sharks, bony fish, fish feeding, commercial fishing, recreational fishing, deep sea fishing, fish aging, and growth. The bulk of the unit consists of student materials and activities including arts and crafts, creative writing, fish in literature, a lesson on cleaning and preparing fish, visual aids, games, fish observation, dissection instructions and diagrams, identification keys, tables, and checklists. Teacher resources include recipes, organizational resources, a directory of fish packers, and an annotated bibliography of books and films. (LH)

Identifiers—*Algae, Gulf of Maine, New England, PF Project

Designed to provide teaching materials for middle school and junior high school teachers in northern New England, this marine education unit presents teacher-tested ideas and activities for use in the classroom and in field trips to the shore. Each unit includes ideas and activities drawn from a variety of

content areas so that teachers of many different subjects can make use of them. Important concepts include the diversity of natural algae communities, and the complex interactions of marine algae with people and the natural seashore environment. Students learn about these complex interrelationships by studying classification, algae species found in the Gulf of Maine, reproduction, ecology, uses of marine algae in the economy, the history of marine algae, the culture and preparation of algae, and the nutritional value of seaweed. The bulk of the unit consists of student materials and activities including games, identification keys, arts and craft ideas, a crossword puzzle, maps, an illustrated field guide, word/phrase lists, game score forms, challenge cards, life history diagrams, puzzle sheets, tests, lists of algae uses, and tables. Teacher resources include an annotated bibliography of over 40 books, articles, periodical sources, and films. (LH)

The Nature-Computer Camp. Final Evaluation Report, 1982-1983. E.C.I.A. Chapter 2. District of Columbia Public Schools, Washington, DC. Div. of Quality Assurance.

Pub Date—Dec 83

Note—64p.

Pub Type—Reports - Evaluative (142)

EDRS Price - MF01/PC03 Plus Postage.

Descriptors—*Academic Achievement, *Attitude Change, Computer Literacy, *Computer Science Education, Ecology, *Environmental Education, Grade 6, Intermediate Grades, *Program Evaluation, Program Implementation, *Socialization, Student Attitudes

This report presents a description and evaluation of the Nature-Computer Camp (NCC), an environmental and computer science program designed for sixth grade students in the District of Columbia public schools. Among the major components of the program were: planning for administration of operating the camp and for instruction in environmental science and computers; staff characteristics; staff development; record keeping procedures; scheduling; materials and supplies; academic curriculum (content and process); instructional process; and the socio-emotional curriculum (attitudes and skills). Observations of inputs for these program components revealed that the only problem encountered was lack of adequate materials and supplies. Overall, the implementation was completed with minimal problems. In addition, all program objectives were attained. These objectives included: a significant gain in knowledge in the areas of stream ecology, woodland ecology and geology, and in knowledge about computers; maintenance or an increase of a positive attitude toward the program; and demonstration of appropriate socialization using a set of social expectations established by staff and student campers. Supporting documentation (including evaluation model schema, data analysis summaries, camp schedules, and samples of expected social behaviors) is included in appendices. (JN)

ED 241 263 SE 043 823

Rubba, Peter A. Wiesenmayer, Randall L. Seven Science Teacher Performance Checklists for Use in Microteaching.

Pub Date—[84]

Note—12p.

Pub Type—Reports - Descriptive (141) — Tests/Questionnaires (160)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Check Lists, Communication Skills, *Evaluation Criteria, Higher Education, *Microteaching, *Preservice Teacher Education, Science Education, *Science Instruction, Teaching Methods, *Teaching Skills

Seven checklists were developed to provide precise feedback to students on their teaching performance during secondary science methods microteaching sessions. These checklists measure performance related to: (1) lesson plans; (2) communications skills; (3) generic teaching; (4) concept demonstration; (5) manipulative skills; (6) pre/post-laboratory discussions; and (7) recitation sessions. The instruments and microteaching are part of a six-step learning process used with each instructional strategy in the methods course. These steps include: examining resource materials or attending lectures related to the strategy; observing former student's microteaching session or having strategy modeled by the instructor; preparing the lesson; teaching the lesson; evaluating the lesson using one or more of the checklists; and revising and re-pres-

enting the lesson. (JN)

Personnel Needs and Training for Biomedical and Behavioral Research. The 1983 Report of the Committee on National Needs for Biomedical and Behavioral Research Personnel.

Institute of Medicine (NAS), Washington, D.C. Spons Agency—National Institutes of Health (DHHS), Bethesda, Md.

Report No.—IOM-83-03

Pub Date—83

Contract—N01-OD-9-2112

Note—260p.

Available from—Committee on National Needs for Biomedical and Behavioral Research Personnel, Institute of Medicine, National Academy of Sciences, 2101 Constitution Ave., N.W., JH-640, Washington, DC 20418.

Pub Type—Numerical/Quantitative Data (110) — Reports - General (140)

EDRS Price - MF01/PC11 Plus Postage.

Descriptors—*Behavioral Science Research, *Biomedicine, College Science, Doctoral Degrees, Federal Aid, Health Services, Higher Education, Labor Market, *Labor Supply, Medical Research, *Personnel Needs, *Postdoctoral Education, Scientists, *Training

Identifiers—National Research Service Awards, *Nursing Research

This report addresses concerns about the quality of biomedical and behavioral research conducted in the United States and the role that federally supported research and training plays in developing it. In addition, current and projected supply of and demand for scientists in the biomedical and behavioral fields is assessed. These fields include the clinical sciences, basic biomedical sciences, behavioral sciences, health services research, and nursing research. Research and training funding, involvement of Ph.D. scientists in clinical investigations, expansion of the postdoctoral population in basic medical sciences, and career outcomes of former National Institutes of Health predoctoral trainees and fellows are among the other areas assessed. In addition to specific recommendations related to each field, three general recommendations are presented: (1) the primary emphasis of National Research Service Awards programs should continue to be on postdoctoral rather than predoctoral training in most fields; (2) training grants should continue to be the dominant mechanism of support (the institutional component of such grants providing badly needed support to department programs); and (3) clinical investigators are still in short supply and efforts to attract them to research careers should continue. Supporting documentation and detailed data used in analysis leading to recommendations are included in appendices. (JN)

Identifiers—*Colorado, Science Education Research

Sixty-eight specific interventions to improve science education were grouped into 11 categories. Each category was then related to one of three major intervention objectives and an associated group. These categories, grouped by objectives are: (1) interventions increasing amount of time students are engaged in learning science (increasing student requirements); (2) interventions increasing quality of instruction (preservice education; enhancing teaching as a career; improving instructional practice; inservice education; improvement of materials, facilities, and equipment; and assistance from business and industry); (3) interventions to increase the "match" between actual classroom objectives with objectives most appropriate in today's world; and (4) facilitating interventions (improving local lead-

ership, testing programs, and public education). Analyses were conducted to determine the cost of implementing each intervention and to determine a rating of its effectiveness based on research data and other available information. The major conclusion reported is that solutions to problems in science education must be sought in the form of combinations of interventions with full regard for the interactions among these interventions. (Also included are modifications of analyses as they pertain to mathematics education and a delphi study on interventions for improving science and mathematics education in Colorado.) (JN)

Identifiers—National Science Foundation, *Science Education Research

A learning cycle consists of three phases: exploration; conceptual invention; and expansion of an idea. These phases parallel Piaget's functioning model of assimilation, disequilibrium and accommodation, and organization respectively. The learning cycle perceives students as actors rather than reactors to the environment. Inherent in that perception are three assumptions, that: (1) each of the three phases is necessary; (2) the sequence of phases must be exploration, conceptual invention, and expansion of the idea; and (3) the form of the exploration is student investigation with materials. Seven experiments were conducted to ascertain the impact of each assumption on students' achievement of conceptual understanding of and attitudes toward selected concepts. Concepts and principal variables (assumptions) tested were: physical and chemical change (sequence); conservation of weight and atoms (necessity); simple chemical reactions (form-lesson control); redox reactions (necessity);

reaction rates (form-data presentation); heat laws (sequence); and Arrhenius acids and bases (form-lesson control). Among the conclusions drawn are those indicating that the sequence of an activity appears to be important, the laboratory as an instructional format for the learning cycle is effective and highly thought of by students, and that teachers utilizing reading with learning cycles shouldn't expect them to be effective. Descriptors—Conservation Education, *Curriculum Development, *Energy Conservation, Engineering Education, Environmental Education, *Federal Programs, *Government Role, Instructional Materials, Material Development, *Program Effectiveness, *Science Education, Training Identifiers—Department of Energy, *Energy Education, National Science Foundation

The federal government's role in energy education in the United States over the past 35 years is discussed, focusing on four major areas: (1) training at all academic levels; (2) instructional materials and their development; (3) conceptual foundations of energy education materials; and (4) research and evaluation studies on the effectiveness of the federal government's attempts at energy education. Among the programs reviewed are those sponsored by the Atomic Energy Commission (AEC), Department of Energy (DOE), and the National Science Foundation. Also reviewed is the government response to the Arab-imposed oil embargo, formation of the Federal Energy Office (FEA), absorption of the FEA and AEC into the Energy Research and Development Administration, and the eventual establishment of the Department of Energy. In addition, government-sponsored efforts at articulating a coherent set of ideas related to energy education are reviewed. These efforts are reflected in such reports as "Fundamentals of Environmental Education," "Energy Education Workshop Handbook," and "A Conceptual Framework for Energy Education, K-12." The latter is a detailed outline for curriculum specialists, textbook writers, and producers of other forms of energy curriculum materials. The scope and conclusions of several studies of federal energy education programs concludes this document. (JM)

Why Mathematics?

Pub Date—84

Note—10p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Art, Cognitive Processes, *Educational Philosophy, Engineering, *Mathematical Applications, *Mathematics, *Mathematics Education, Music, Religion, Sciences

Why mathematics should be learned is discussed. Its role as an important active force in the development of our civilization, and as the most useful subject taught in our schools, next to English, is noted. The primary objective of all mathematics work is to help man study nature, and some practical achievements of this connection are noted. Mathematics is also important in a number of fields, such as the social sciences, business, medicine, military science, communication, and transportation. Then, mathematics as a beautiful art form is discussed, and its relationship to music is described. What mathematics should mean to ministers is also noted. The relevancy of pure mathematics, which may seem to have no practical use, is detailed. Finally, that mathematics trains the mind to think clearly is propounded. A closing comment stresses everyone's need for mathematics. (MNS)

Math Anxiety: Cause, Impact and Challenge to Black Students.

Pub Date—84

Note—7p.

Pub Type—Opinion Papers (120)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—*Black Students, *Careers, *Educational Philosophy, Engineering, *Mathematics Anxiety, *Mathematics Education, Mathematics Instruction, Sciences

The underrepresentation or absence of blacks in many science and engineering areas is of major concern. A strong mathematics background is essential to success in these fields, and mathematics anxiety is the greatest obstacle facing many black students. Seven common causes of mathematics anxiety among blacks are listed: low expectations and callous reactions of teachers to student questions; teachers' overemphasis on fundamental and computational procedures rather than creative problem solving; parental expressions of their mathematics difficulties; inadequate knowledge of black achievement in science and engineering; the belief that special talents are needed; the belief that mathematical ability is inherent rather than developed; and the failure to be properly trained in early grades. The fear that prevents many blacks from seeking jobs that require mathematics is also discussed. Five challenges that must be faced are then presented to aid blacks in overcoming mathematics anxiety. (MNS)

Descriptors—*Agricultural Production, *Climate, Environmental Education, Food, *Futures (of Society), *Land Use, *Physical Environment, Policy Formation, *Population Growth, Population Trends, Research Needs, Weather

Identifiers—Environmental Quality

Scientists and educators examined long-term national and world trends related to the web of interrelationships involved in climate, food production, population, land use, and environmental quality. Current information and projections for the next quarter century were discussed. In reviewing scientific findings, it was noted that global weather will fluctuate more in the next 25 years than it has during the last 2 decades. Discussions on how to decrease some of the 50 percent crop loss from rodents, insects, disease, waste, and spoilage were triggered by knowledge that world food demand today is the largest in history and that it will increase in future years. The fact that less developed countries will suffer most from food shortages and that famine, social unrest, and possible political chaos may not be far away was of considerable concern. In pinpointing new land for conversion to crops, it was noted that people create five times more desert than cropland, that expanding world population means urban encroachment on prime food producing land, and that atmospheric pollution by people may be modifying the climate enough to significantly alter the boundaries of existing croplands for the next 25 years. Rubba, Peter A.

Public School Principals Assess Illinois Science Teacher Demand—Data from Southern Illinois.

Pub Date—84

Note—15p; Paper presented at the 1984 Research and Projects Field Day of the SIUC chapter of Phi Delta Kappa (March 3, 1984). Paper based on study by Rubba and Becker (1984).

Pub Type—Reports - Evaluative (142) — Speeches/Meeting Papers (150)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Biology, Chemistry, Earth Science, *Employment Opportunities, *Employment Projections, General Science, Geology, Mathematics Teachers, Physics, Principals, Science Education,

*Science Teachers, State Surveys, Teacher Employment, *Teacher Supply and Demand, Teaching (Occupation) Identifiers—*Illinois

A methodological weakness of recent studies on teacher shortages is the degree to which respondents in these surveys were removed from the school environment, and consequently from science and mathematics teacher hiring. An attempt was made to resolve this problem by assessing Illinois public school principals (grades 6 to 12) on science and mathematics teacher demand in their schools. A questionnaire (designed specifically for this purpose) was used to ask principals (N=413) to predict their schools' future demand for science and mathematics teachers given their knowledge of local population trends, and anticipated teacher retirement and resignations. Questionnaires were returned by 228 principals, a 55 percent return rate. This paper reports findings collected from 32 southern Illinois principals relative to the anticipated level of science teacher demand in southern Illinois through the 1985-86 to 1990-91 school years. Projections for 1985-86 indicate a need for 10 full time junior high school teachers, 10 quarter-time physics teachers, and 10 quarter time earth science/geology teachers; an adequate supply of chemistry teachers; and an oversupply of biology teachers. Projections for 1990-91 show essentially no demand for science teachers in southern Illinois. (JN)

Descriptors—*Agricultural Production, *Botany, *College Science, Cooperative Programs, Cytology, *Dna, *Genetic Engineering, Genetics, Higher Education, Industry, Laboratory Safety, Patents, Policy, *School Business Relationship, Scientific Research

Identifiers—*Biotechnology, Plants (Botany)

Plant scientists and science policymakers from government, private companies, and universities met at a convocation on the genetic engineering of plants. During the convocation, researchers described some of the ways genetic engineering may be used to address agricultural problems. Policymakers delineated and debated changes in research funding and training necessary to realize this potential. In addition, various speakers urged new collaborative efforts among basic scientists and plant breeders. This book, intended to serve as an introduction and guide for those who wish to follow the development of this promising new technology, summarizes these discussions. Sections in the book focus on topics and issues related to: (1) crop improvement; (2) gene transfer; (3) genetic engineering as a tool for fundamental plant science; (4) somatic cell genetics; (5) applications of biotechnology to agricultural problems (including herbicide resistance, bioengineered microorganisms used to combat plant diseases, and nitrogen fixation); (6) policy and institutional considerations; (7) university-industry relations (considering university concerns, industry concerns, and a three-way cooperative program in New York); (8) safety regulations; and (9) patents. Identifiers—*Cockcroft Report, *England

This document summarizes "Mathematics Counts," the report of the Committee of Inquiry into the Teaching of Mathematics in Schools in Great Britain, chaired by Dr. W. H. Cockcroft. It provides a digest of the report, paralleling the following chapters: (1) why teach mathematics? (2) the mathematical needs of adult life, (3) the mathematical needs of employment, (4) the mathematical needs of further and higher education, (5) mathematics in schools, (6) mathematics in the primary years and in the secondary years, (7) calculators and computers, (8) assessment and continuity, (9) examinations at 16+, (10) mathematics in the Vth form, (11) facilities for teaching mathematics, (12) the supply of suitable qualified mathematics teachers, (13) initial training courses, (14) in-service support for teachers, (15) some other matters, and (16) the way ahead. Identifiers—*Extraterrestrial Life

This 12-chapter book discusses the scientific facts behind the ideas included in the novels of Robert Heinlein, Isaac Asimov, Frederik Pohl, Arthur C. Clark and other science fiction writers. Areas explored in the first 11 chapters include: exploration of deep space; energy and exotic power sources; likelihood of extra-terrestrial life and the forms it may take; imaginary science (such as alternative universes, antigravity, speeds faster than light, instantaneous communications); time travel and other universes; warfare; intelligent machines; men and supermen (biological engineering); mechanisms of artificial intelligence; unidentified flying objects (UFOs); powers of the mind; and future societies (considering machines and the leisure society, conditioning and brainwashing, psychotropic drugs, crime and punishment). The final chapter is devoted to the places where science fiction writers have gotten their science all wrong as well as some famous bad predictions. (A list of stories and novels cited along with a brief list of non-fiction books for further background reading are included.) (JN)

Forest Experiences of Fifth-Grade Chicago Public School Students.

Forest Service (DOA), St. Paul, Minn.

Report No.—USDA-RP-NC-216

Pub Date—81

Note—8p.

Pub Type—Reports - Research (143)

EDRS Price - MF01/PC01 Plus Postage.

Descriptors—Black Students, Elementary Education, *Environmental Education, *Expectation, Fear, Grade 5, *Prior Learning, *Racial Differences, Sex Differences, *Student Attitudes, *Urban Youth, White Students

Identifiers—Environmental Education Research, *Forests

Through a Chicago Public School Program fifth-grade students from different cultures and backgrounds were brought together to experience and learn about a forest environment. These urban students (N=269) completed a brief questionnaire about their previous experiences, perceptions, and expectations regarding forest resources. Findings indicate that most children had been to an urban or

rural forest and had enjoyed and learned from the experiences (which usually involved walking or hiking), that most students who had not visited a forest probably would enjoy such an experience, and that previous forest/woodland experiences of these students differed by sex and ethnic background. Although most students felt safe in the forest and in their own neighborhood, blacks reported a larger number of dangers in each environment. These and other findings have implications for urban education programs that focus on forests and related resources. When developing such programs it is not enough to study only the children's reaction to the forest. The home environment must also be considered in order to relate the educational program to concepts the children can understand and to comprehend the children's reaction to the material being presented. Descriptors—Air Pollution, *Cancer, *Environmental Standards, Federal Legislation, Food, Occupational Safety and Health, Physical Environment, *Policy Formation, Public Health, *Public Policy, Safety, *Sciences, *Toxicology

Identifiers—Clean Air Act 1963, *Environmental Risk Assessment

This workshop explored the complex issues involved in scientific measurement of environmental risk. Specific purposes were to articulate policy issues that concern the use of scientific data in environmental risk assessment and to contribute to the dialogue from which better policy might emerge. Viewpoints of workshop participants from the executive and legislative branches of government, industry, the academic community, and the policy analysis community are provided under these titles: "Differences in Assessing Risks for Food and Drugs" (J. Richard Crout); "Risk Assessment and the Legislative Process" (Thomas H. Moss); "Science and Environmental Risk: Policy Issues" (Denis Prager); "Regulating Toxic Substances: An Update" (Morton Corn); "New Scientific Issues" (Robert J. Moolenaar); "The Clean Air Act: An Update" (Gilbert S. Omenn); "Ecological Factors in Human Cancer" (John Higginson); "Future Directions for Science and Policy" (William W. Lowrance); "Risk Analysis at the Office of Technology Assessment" (John H. Gibbons); and "Industrial Perspective on Regulating Carcinogens" (Monte C. Thordahl). Among the broad areas of consensus reported are those indicating that federal regulations are needed (especially in regulating chemical substances that affect human health) and that there is rarely an effective dialogue between industry and government before issues become critical and debate assumes a confrontational character. Identifiers—Science Education Research

Studies were conducted to identify critical barriers which could impede the progress of Hispanic undergraduates enrolled in science and engineering programs. The underlying theme in most studies was the interplay of language in various problem-solving tasks. Studies examined: (1) predictors of academic achievement (as measured by grade point average); (2) ability of students to translate word problems into appropriate mathematical equations, with an emphasis on identifying errors caused by misinterpretations of the problem statement as opposed to errors caused by mathematical deficiencies; (3) extent to which students' academic, motivational, and socioeconomic characteristics mediated their performance in various cognitive measures; and (4) the ability of students to solve logical reasoning problems containing multiple negations. Findings indicate that Hispanic students are underrepresented in comparison to Anglo students. Areas in which Hispanics displayed underpreparation are algebraic skills, language skills, and problem-solving skills requiring substantial amounts of linguistic processing. Differences in socioeconomic status between Hispanics and Anglos were also found. In addition, findings indicate that various errors committed by the Hispanics in solving mathematics and logic problems are the result of semantic difficulties and not necessarily the result of difficulties in the content area. Rule Learning

This issue contains abstracts and critical comments on 11 articles, plus an editorial comment entitled "A Teacher Shortage?". Studies included concern solution processes on addition and subtraction examples; numerical rule induction; individual differences in performance on manipulative, pictorial, and symbolic tasks; the effect of a calculator curriculum; proportionality rules in judgments of area; van Hiele levels of geometric thought; interaction patterns and attitudes; word problems with ratios; incremental development in algebra; instruction with two types of calculators; and errors in translation from sentence to equation. Research studies reported in "Resources in Education" from July to September 1983 are listed. (MNS)

Identifiers—Cockcroft Report, England, *Mathematics Education Research

This first volume of a review prepared for the Cockcroft Committee of Inquiry into the Teaching of Mathematics in Schools in Great Britain, and its main conclusions were incorporated in their report, "Mathematics Counts." Its aim was to display the main outcomes of research relevant to the teaching and learning of mathematics. The introduction of this first volume was intended to highlight some of the main points of the review, as well as to put it into the context of questions currently of concern. The 14 chapters of the document synthesize the research on the following particular topics in mathematics education: (1) the mathematics curriculum; (2) background psychology; (3) stages of general intellectual development; (4) skills, concepts, and strategies; (5) the teaching of facts and skills; (6) understanding of concepts in specific topic areas; (7) teaching methods; (8) process aspects; (9) attitudes; (10) individual differences; (11) language; (12) evaluation and assessment; (13) calculators and computers; and (14) using research. A supplement has been added to take account of work published since the original review was compiled. (MNS)

Identifiers—Cockcroft Report, England, *Mathematics Education Research

This second volume of a review prepared for the Cockcroft Committee of Inquiry into the Teaching of Mathematics in Schools in Great Britain reflects a sociological research basis in which neither mathematics nor mathematics teaching is the essential focus. Rather, as the introduction indicates, the concern is with the constraints (institutional and social) which surround the teaching of mathematics and with their effects upon teachers and pupils. Thus, the focus is on the social context in which the teaching and learning of mathematics takes place. Both research and non-research sources were included, integrated, and used as the basis of recommendations. Eight chapters are included, on: (1) the institutional aspect and within-school relationships; (2) pupils as a constraint; (3) societal constraints; (4) the structure of the teaching profession; (5) the effects of initial training of teachers of mathematics; (6) teacher characteristics; (7) in-service training and professional development; and (8) some general conclusions. Finally, a list of references and the set of recommendations made to the Cockcroft Committee are included. (MNS)
